#### PUBLIC HEALTH STAFF

At 31st DECEMBER, 1937.

Medical Officer of Health: JOHN RENNIE, M.D., D.P.H.

Deputy Medical Officer of Health (also Medical Superintendent of City General Hospital, Nether Edge Hospital, City Hospital for Infectious Diseases and Medical Officer, Firvale House and Herries Road, etc. Homes): JAMES CLARK, M.D., F.R.C.P., D.P.H.

Medical Superintendent of King Edward VII Hospital for Crippled Children and Surgical Tuberculosis Officer:

C. LEE PATTISON, M.B., B.S., M.R.C.S., L.R.C.P.

Clinical Tuberculosis Officer and Medical Superintendent of City Sanatoria: H. MIDGLEY TURNER, M.D., M.R.C.P., D.P.H.

Senior Medical Officer of City Hospital for Infectious Diseases and Medical Officer Fulwood Cottage Homes:

JOSEPH M. KENNEDY, M.B., Ch.B., D.P.H.

Deputy Medical Superintendent and Resident Obstetrician of City General Hospital. W. J. CLANCY, M.B., Ch.B., B.A.O., M.C.O.G.

> Senior Assistant Medical Officer of Nether Edge Hospital: L. P. De ABREW, M.R.C.S., L.R.C.P.

> > Assistant Medical Officer (Maternity): ANN KIRK BLACK, M.B., Ch.B.

Chief Veterinary Officer: H. M. SALUSBURY, M.R.C.V.S., D.V.H.

 $Public\ Analyst:$ JOHN EVANS, F.I.C., F.C.S.

Consultants, Medical Practitioners, Dental Surgeons, etc., discharging special duties for the Health Committee :-

Radiologist at City General Hospital
Dermatologist at City General Hospital.
Consultant Gynæcologist at City General Hospital.
2 Consultant Physicians at City General Hospital.
2 Consultant Surgeons at City General Hospital.
3 Assistant Medical Officers for Maternity and Child Welfare.
Consultant Gynæcologist at Maternity Clinic.
Dental Surgeon to expectant mothers

Dental Surgeon to expectant mothers.

6 Medical Officers of Venereal Disease Clinics at Voluntary Hospitals.

2 Consultant Medical Officers under Mental Deficiency Acts.

33 District Medical Officers under the Poor Law Acts.

34 Public Vaccinators.

5 Dual appoint Medical Officers in connection with Children's House and Statement Mostly
Dual appointments. 3 Medical Officers in connection with Children's Homes and Scattered Homes.

#### Other Officers :-

3 Assistant Medical Officers—City Fever Hospitals. Deputy Superintending Health Visitor. Resident Physician—City General Hospital.

Resident Surgeon—City General Hospital.

7 Assistant Medical Officers—City General Hospital.

4 Assistant Medical Officers (Maternity)—Nether

Service).

3 Jessop Hospital Midwives (Domiciliant Medical Officers (Maternity)—Nether)

Edge Hospital. House Surgeon—King Edward VII Hospital.
Medical Officer under Mental Deficiency Acts.
6 Assistant Tuberculosis Officers.
2 Assistant Veterinary Inspectors.

Meat Inspector.
Meat Detention Officers—Abattoir.

3 Food and Drugs Inspectors.
5 Superintending Sanitary Inspectors.
5 Deputy Superintending Sanitary Inspectors.
27 District Sanitary Inspectors.
Superintending Health Visitor.

36 Municipal Midwives (Domiciliary Midwifery

3 Jessop Hospital Midwives (Domiciliary Midwifery Service).

Chief Tuberculosis Inspector.

4 Tuberculosis Inspectors. Chief Smoke Inspector and 4 Smoke Inspectors (scrving Sheffield and Rotherham Regional Area)

Vaccination Officer.
Superintendent and Matron, Herries Road, etc.
Homes.

Superintendent and Matron, Fulwood Cottage Homes.

Inspector to Boarded-Out Children.

TOWN HALL,

SHEFFIELD,

JULY, 1938.

TO THE CHAIRMAN AND MEMBERS OF THE HEALTH COMMITTEE.

MR. CHAIRMAN, LADIES AND GENTLEMEN,

I beg to submit my Annual Report on the health of the City of Sheffield for the year 1937.

The birth rate for the City increased from the previous year and was higher than in any year since 1929.

The general death rate was a favourable one, although rather higher than in the previous year and slightly above the rate for England and Wales.

The infant mortality rate showed a reduction from the previous year and was lower than the rate for England and Wales.

Mortality amongst the infectious diseases, apart from Diphtheria mortality, was low during the year. As regards Diphtheria the epidemic prevalence of the previous year was less marked and there was a considerably reduced mortality.

There was an increased mortality from Influenza and the rate was the highest since 1933. In the early months of the year there was epidemic prevalence of Influenza, the disease being widespread throughout the country.

Mortality from Tuberculosis (All Forms) and from Tuberculosis of the Respiratory System both increased somewhat from the record low rates of the previous year.

There was a decrease from the previous year in the mortality from Cancer and the rate for this disease was below that of England and Wales.

The maternal mortality rate again showed a reduction from the previous year, although it was nevertheless somewhat higher than the England and Wales rate.

The hospital services continued to function with efficiency during the year under review. The extensive programme of reconstruction which has been in progress since 1936 at Lodge Moor Infectious Disease Hospital is reaching the concluding stages. Twelve old wooden wards which have been erected since the year 1888 have been demolished and replaced by modern ward pavilions. Work is shortly expected to commence upon the building of the last four ward pavilions.

The erecting of a new Public Health Laboratory at the City General Hospital has lately been under contemplation and negotiations have now reached the point of the letting of the contract. The establishing of this laboratory will give greater facilities in the diagnosis of disease and will also bring into being the much needed unification of the several sections of the pathological and bacteriological services. A Children's block, which is in course of being erected at the City General Hospital will furnish isolation facilities to the extent of twelve beds and a further scheme has been inaugurated for an extension at King Edward VII Hospital, providing an accommodation of 20 beds for the treatment of adult patients suffering from Tuberculosis of bones and joints.

There was again considerable development in the Maternity and Child Welfare services and there were again increases in the numbers of sessions held in connection with the Ante-natal and Infant clinics. The new Firth Park Maternity and Child Welfare Centre, which affords facilities in all respects equivalent to those at the City Centre, was officially opened by the Minister of Health in June of the present year. There is little doubt that this Centre meets the needs of a large section of the community whose homes are in the localities lying to the North of the City. Schemes are in course of development for the provision of further Centres at Intake and Attercliffe.

The contract for the new Maternity Block at the City General Hospital is approaching completion. Thirty-two additional lying-in beds are being provided and these beds constitute an important extension of the maternity section of the Hospital. This extra accommodation is all in the form of single-bed cubicles.

In accordance with the requirements of the Midwives Act 1936 a Domiciliary Midwifery Service was established in the City on the 30th July, 1937. Considerable care was exercised in the preparation of the scheme and there has been every cause for satisfaction in the resultant working arrangements.

In continuance of the slum clearance programme there were official representations made under the Housing Act 1936 during the year in regard to a total of 5,378 houses in 125 Clearance Areas. Official representations were also made under the Act concerning 777 individual unfit houses. Six public inquiries, relating to a total of 3,232 houses in Clearance Areas, were conducted in the City by the Inspectors of the Ministry of Health.

The year has been one of great activity in the Health Services of the City and I wish to express my appreciation of the loyal manner in which the members of the staff have extended their aid to me.

I also desire to record my thanks to the Chairman and Members of the Health Committee for the support which they have at all times during the year placed at my disposal.

I am,

Your obedient servant,

JOHN RENNIE,

Medical Officer of Health.

### VITAL AND MORTAL STATISTICS.

Special Features.—The birth rate for the year 1937 which exceeded that of England and Wales, was higher than for any year since 1929 and showed an increase for the fourth successive year. The general death rate was slightly higher than in 1936 and for the third successive year was slightly above the England and Wales rate.

There was a reduction in the Infant Mortality rate from the year 1936, and the rate was below that of England and Wales.

As regards both Tuberculosis of the Respiratory System and Tuberculosis (All Forms) there were increases from the record low death rates of the year 1936. Sheffield's satisfactory position in the list of large towns was again well maintained, however, only four towns having lower Respiratory and All Forms rates.

The mortality rate among Children under two years of age from Diarrhœal diseases was lower than in 1936, and was below the rate for England and Wales.

There were no deaths from Typhoid Fever during the year.

There were no deaths from Searlet Fever, and the sickness incidence showed a very considerable reduction from the year year 1936.

The prevalence of Diphtheria was less pronounced during 1937, and the mortality rate showed a considerable reduction from the 1936 rate.

The mortality rate from Puerperal Causes was lower than in the year 1936 and did not greatly exceed the England and Wales rate.

There was a decrease in the mortality from Cancer from the previous year's figure and the rate was lower than the England and Wales rate.

The mortality from Influenza was the highest since the year 1933 and the rate was higher than that of England and Wales.

Area.—The total area of the City at 31st December, 1937 was 39,584 acres.

POPULATION.—The Registrar General's mid-year estimate of the population of the City for 1937 was 518,200. The City population estimate, year by year, is given in Table I. on page 24.

MARRIAGES.—The number of marriages in 1937 was 5,049 and the marriage rate was 19·5 as against 19·7 in 1936, this latter rate being the highest since 1920. Table III. on page 25 gives marriages and marriage rates for Sheffield and for England and Wales in quinquennia since 1922, and it will be seen that the averages of the Sheffield rates for the last two quinquennia given exceed those of England and Wales, as also does the rate for the year 1937.

LIVE BIRTHS.—There were 8,363 live births registered in the City in 1937 and the transferable births numbered 64 inwards, and 465 outwards. The net live births allocated to the City therefore numbered 7,962, and the birth rate was 15·4 per 1,000 of the population as against a rate of 15·2 per 1,000 in 1936. The England and Wales rate for 1937 was 14·9 per 1,000. It will be seen from the table below that the continuous decline in the birth rate ceased in the year 1934, since when an increase has been maintained. The 1937 rate exceeds the average of the ten previous years.

	Year		Number of Live Births	Ra of th	ate per 1000 ne Population
	1927		8,526	• • • • •	$16\cdot 2$
	1928		8,438		$16 \cdot 4$
	1929		7,976		$15 \cdot 4$
	1930	•••••	7,831		$15 \cdot 1$
	1931	•••••	7,777	• • • • •	$15 \cdot 0$
	1932	• • • • • • •	7,393		$14 \cdot 4$
	1933	• • • • • •	7,178	• • • • • •	$14 \cdot 0$
	1934		7,530		$14 \cdot 5$
	1935		7,676	•••••	$14 \cdot 7$
	1936		7,884		$15 \cdot 2$
Average	1927 - 36		7,821		$15 \cdot 1$
	1937		7,962	•••••	$15 \cdot 4$

STILL BIRTHS.—Still births allocated to the City in 1937, after making allowance for transferable births, numbered 341 and gave a rate of 0.66 per 1,000 of the population, as against a rate of 0.61 for 1936. The 1937 rate for England and Wales was 0.60. The still births of the City in 1937 also represent a rate of 41 per 1,000 total (live and still) births, as compared with 38 per 1,000 in 1936.

Deaths.—There were 6,718 deaths registered in the City in the year 1937 and the transferable deaths numbered 245 inwards and 471 outwards. The number of deaths of Sheffield residents was therefore 6,492, of which 3,475 were males and 3,017 females, and the death rate from All Causes was  $12 \cdot 5$  per 1,000 of the population. This rate, as is shown in the table below, is higher than the average rate for the decade 1927-1936 by  $0 \cdot 6$ . It is also higher than the 1937 rate for England and Wales of  $12 \cdot 4$  per 1,000.

	Year		$\begin{array}{c} {\rm Number\ of} \\ {\rm Deaths} \end{array}$	of	Rate per 1000 the Population
	1927	• • • • • •	6,436		$12 \cdot 3$
	1928		6,099		$11 \cdot 8$
	1929	• • • • • •	6,850		$13 \cdot 2$
	1930		5,675		$11 \cdot 0$
	1931		5,839		$11 \cdot 3$
	1932		5,976		$11 \cdot 6$
	1933		6,117		$12 \cdot 0$
	1934		5,886		$11 \cdot 4$
	1935		6,193		$11 \cdot 9$
	1936		6,334		$12 \cdot 2$
Average	1927-36		6,141		$11 \cdot 9$
	1937		6,492		$12 \cdot 5$

A comparison of the death rate of Sheffield with that of England and Wales in quinquennia is given in the following table. It will be noted that in the three quinquennia ending with the period 1931 to 1935 the Sheffield rate was below that of England and Wales.

0 .:iol					Mean Ann	nual Morta of the Po	lity Rate
Quinquennial Periods					Sheffield	Engl	and and Wales
1871-1875					$26 \cdot 8$		$22 \cdot 0$
1876-1880					$24 \cdot 2$		$20 \cdot 8$
1881-1885				• • •	$21 \cdot 6$		$19 \cdot 4$
1886-1890					$22 \cdot 1$		$18 \cdot 9$
1891-1895		• • •			$20 \cdot 9$		$18 \cdot 7$
1896-1900					$20 \cdot 6$		$17 \cdot 7$
1901-1905		• • •			$18 \cdot 2$		$16 \cdot 1$
1906-1910	•••				$16 \cdot 4$		$14 \cdot 7$
1911-1915					$15 \cdot 9$	•••••	$14 \cdot 3$
1916-1920					$15 \cdot 7$		$14 \cdot 4$
1921-1925					11.8		$12 \cdot 2$
1926-1930				•••	$11 \cdot 9$		$12 \cdot 1$
1931-1935			•••		$11 \cdot 6$	•••••	$12 \cdot 0$

SMALL-Pox.—There were no eases of Small-Pox notified during the year.

Measles.—There were 63 voluntarily notified eases of Measles during the year and 70 admissions to Municipal Hospitals.

The mortality rate for the year was 0.015 per 1,000 of the population as against 0.083 in 1936. The average annual rate for the five years 1932-36 was 0.048.

The following table, giving the mortality rate per million in Sheffield since the year 1927, indicates that the Measles mortality rate alternates annually between high and low:—

Year				Rate	Mortality e per Million
1927				 	44
1928		•••		 •••	229
1929		•••		 •••	27
1930				 	129
1931				 	10
1932				 	86
1933				 	4
1934				 	50
1935	•••			 	17
1936		•••		 	83
1937		•••	•••	 	15

Scarlet Fever.—There were no deaths from Scarlet Fever during the year. The 1936 death rate was 0.010 per 1,000 of the population and the average annual rate for the quinquennium 1932-36 was also 0.010.

The attack rate was  $2 \cdot 09$  per 1,000 as against  $4 \cdot 85$  for 1936 and an average rate of  $4 \cdot 40$  for the quinquennium 1932-36.

DIPHTHERIA.—The death rate from Diphtheria was 0.083 per 1,000 of the population, which eompares with 0.07 for England and Wales. The rate for the City for 1936 was 0.166 and for the quinquennium 1932-36 it was 0.088 as against 0.077 for England and Wales.

The attack rate during 1937 was 3·17, which has to be compared with a rate of 3·86 for 1936 and an average rate of 2·53 for the quinquennium 1932-36.

The following statement shows the percentage of mortality in regard to hospital-treated and home-treated cases of Diphtheria during the year 1937:—

	$egin{array}{c} \mathbf{Hospital\text{-}treated} \\ \mathbf{Cases} \end{array}$	Home-treated Cases	Totals
Number of cases notified	1631	13	1644
Number of deaths	41	2	43
Percentage mortality	$2 \cdot 5$	$15\cdot 4$	$2 \cdot 6$

Epidemic prevalence of Diphtheria commenced in September 1933 and this prevalence has, with certain fluctuations, been maintained since that time. There were 1,424 cases notified in 1934 and the figure increased in the years 1935 and 1936 to 1,750 and 2,000 cases respectively. There were 1,644 cases in 1937, or 106 less than the 1935 figure.

Whooping Cough.—There were only seven deaths from Whooping Cough during the year and the death rate, which created a new low record, was 0.014 per 1,000 of the population as against 0.075 in 1936. The average for the quinquennium 1932-36 was 0.063.

Typhoid AND Paratyphoid Fever.—There were 11 cases of Typhoid (including Paratyphoid) Fever notified during the year 1937, giving an attack rate of 0.02 per 1,000 of the population, as against a rate of 0.04 for 1936 and an average for the quinquennium 1932-36 of 0.02. In three of the cases the infection appeared to have been contracted outside the City. There were no deaths under this heading during the year. The 1936 death rate was 0.004 per 1,000 of the population and the average annual rate for the quinquennium 1932-36 was 0.002.

Diarrhea and Enteritis under Two Years of Age.—Mortality from this group of diseases, stated per 1,000 live births, was 3·27 in 1937 as compared with 5·8 for England and Wales. The rate for 1936 was 5·94 as against 5·75 for England and Wales. The comparatively favourable position of the City as regards the Diarrhea and Enteritis death rate is very marked in table L. on page 23, where it will be seen that fifteen of the eighteen great towns had higher rates than Sheffield. If reference is made to Annual Reports of the early years of the present century, it will be found that Sheffield then occupied actually the worst position among the great towns as regards mortality from this group of diseases.

Undulant Fever.—Two cases of Undulant Fever were notified during 1937.

Cerebro-Spinal Fever, with 6 deaths. In 1936 there were 15 notified cases and 9 deaths.

Acute Poliomyelitis.—Six cases of Acute Poliomyelitis or Polioencephalitis were notified in 1937 and no deaths occurred. There were also six cases notified in 1936.

ENCEPHALITIS LETHARGICA.—During the year five cases of Encephalitis Lethargica were notified and there were nine deaths. Deaths are still being registered of persons who contracted the disease during the 1924 epidemic.

Dysentery.—48 cases of Dysentery, mostly of the Sonné type, were notified during the year and there were two deaths. Practically all the patients were young children who were notified from the various hospitals of the City.

Malaria.—One case of Malaria was notified during the year. The disease was contracted abroad.

FOOD POISONING.—Food Poisoning is notifiable in Sheffield under the provisions of Section 190 of the Sheffield Corporation Act 1928. Seven cases were notified during 1937 and there was one death from the disease.

INFLUENZA.—The Influenza death rate was 0.519 per 1,000 as against 0.45 for England and Wales, the corresponding 1936 figures being 0.102 and 0.148 respectively.

There was great prevalence of Influenza throughout the country at the end of the year 1936 and in the early part of 1937. In Sheffield the rise in mortality began with deaths in the returns for the week ended 9th January and from that time until the week ended 20th February high death rates prevailed. The deaths in the first quarter of the year numbered 247 of the year's total of 269. The records of the deaths show that the majority were of persons over 45 years of age. The 1937 death rate was the highest since 1933 and, as was the case in that year, it exceeded the rate for England and Wales.

PNEUMONIA.—The Pneumonia incidence rate was 4.18 per 1,000 of the population and the death rate 1.021 per 1,000, the corresponding figures for 1936 being 3.00 and 0.824 respectively.

The incidence of Pneumonia increased along with the greater prevalence of Influenza in the early months of the year 1937 and 1,053 cases out of the year's total of 2,165 were notified in the March quarter. There were 529 deaths during the year and 227 of them occurred in the March quarter.

The following table shows the number of cases of Pneumonia notified and the number and percentage of cases removed to the City Fever and City General Hospitals during the last 10 years.

All home cases notified are visited by nurses attached to the Queen Victoria District Nursing Association.

**TABLE A.** Pneumonia.—Cases notified and treated in Municipal Hospitals, also percentage treated. Years 1928 to 1937.

	1928	1929	1930	1931	1932	1933	1934	1935	1936	1937
Cases Notified Cases treated in (a) City Fever	2693	3389	1568	2175	2338	2378	1684	1698	1554	2165
Hospital (b) City General	328	318	288	480	643	480	21	_	3	22
Hospital Percentage of Cases treated in	403	343	208	256	342	516	535	621	652	920
Hospital	27.1	19.5	31.6	33.8	42.2	41.9	33.0	36.6	42.1	43.6

Particulars are given below, under the sexes, with regard to mortality from Pneumonia during 1937 and the previous five years. The sex disparity was again very marked in 1937.

TABLE B .- Pneumonia Mortality, year 1937 and the previous five years.

Year		Number of Deaths	Rate per 1,000 of the Population		
	Males	Females	Total	Sheffield	England and Wales
1932 1933 1934 1935 1936 5 yrs' av'ge (1932-6) 1937	247 242 250 246 266 250 331	192 190 122 154 161 164 198	439 432 372 400 427 414 529	$\begin{array}{ c c c c }\hline 0.86 \\ 0.84 \\ 0.72 \\ 0.77 \\ 0.82 \\ 0.80 \\ 1.02 \\ \end{array}$	$ \begin{array}{c c} 0.74 \\ 0.75 \\ 0.71 \\ 0.66 \\ 0.69 \\ 0.71 \\ * \end{array} $

<sup>\*</sup> Figure not available.

Bronchitis.—Mortality during 1937 and the quinquennium 1932-36 is set out under the sexes in the table below. The mortality rate for 1937 was comparatively low and the figures throughout the period compare favourably with those for England and Wales.

TABLE C.—Bronchitis Mortality, year 1937 and the previous five years.

Year	N	Number of Death	s		1,000 of the ulation
	Males	Females	Total	Sheffield	England and Wales
1932 1933 1934 1935 1936 5 yrs' av'ge (1932-6) 1937	113 106 73 80 81 91	104 103 68 67 84 85 87	217 209 141 147 165 176 184	$\begin{array}{c} 0 \cdot 42 \\ 0 \cdot 41 \\ 0 \cdot 27 \\ 0 \cdot 28 \\ 0 \cdot 32 \\ 0 \cdot 34 \\ 0 \cdot 36 \end{array}$	$0.51 \\ 0.52 \\ 0.42 \\ 0.39 \\ 0.43 \\ 0.45 \\ *$

<sup>\*</sup> Figure not available.

Cancer.—The 1937 death rate from Cancer was 1.528 as against 1.636 in 1936, the England and Wales rates for the two years being 1.632 and 1.625 respectively. From the table which follows it will be seen that apart from the year 1936 the rate for Sheffield has been consistently lower than that for England and Wales during the period set out.

TABLE D.—Cancer Mortality, year 1937 and the previous five years.

Year	2	Number of Death	as		1,000 of the lation
	Males	Females	Total	Sheffield	England and Wales
1932 1933 1934 1935 1936 5 yrs' av'ge (1932-6) 1937	363 399 413 408 440 405 410	314 364 376 385 408 369 382	677 763 789 793 848 774 792	$ \begin{array}{c} 1 \cdot 32 \\ 1 \cdot 49 \\ 1 \cdot 52 \\ 1 \cdot 52 \\ 1 \cdot 64 \\ 1 \cdot 50 \\ 1 \cdot 53 \end{array} $	$ \begin{array}{c} 1 \cdot 51 \\ 1 \cdot 53 \\ 1 \cdot 56 \\ 1 \cdot 59 \\ 1 \cdot 63 \\ 1 \cdot 56 \\ 1 \cdot 63 \end{array} $

A completely equipped Regional National Radium Centre, governed by a Committee consisting of representatives from the Sheffield University, the four Voluntary Hospitals and the Health Committee of the Sheffield City Council, is established at the Sheffield Royal Infirmary. From this Centre are provided all forms of Radium treatment and Deep X-ray Therapy not only for Sheffield residents but also for cases from the surrounding districts of the West Riding, from the Counties of Derbyshire, Nottinghamshire and Lincolnshire and from certain County Boroughs within practicable reach of Sheffield.

The Medical Director of the Centre has entire control of all radiological treatment and has the assistance of three whole-time Medical Officers. This medical staff works in the closest co-operation with the four principal Voluntary Hospitals and the Municipal General Hospital. The Radium treatment is administered in these hospitals and is in all cases given under the supervision of the Medical Director of the Radium Centre. For Deep X-ray Therapy patients are conveyed from the Hospitals to the Radium Centre. The Centre also provides Radium treatment and Deep X-ray Therapy for Nursing Homes' patients and for the patients of private medical practitioners.

The Sheffield City Council makes an annual contribution towards the expenses of the Centre in consideration of the services which are provided.

The 1936 records relating to Sheffield residents in regard to Radium treatment, Deep X-ray Therapy and Surgical treatment show that 540 Voluntary Hospital patients and 53 Municipal Hospital patients received one or more of these forms of treatment during the year. In addition the staff of the Radium Centre administered either Radium treatment or Deep X-ray Therapy or a combination of both to 56 patients who were in Nursing Homes or who were being attended by private medical practitioners.

So far as the treatment of Cancer is concerned every possible measure has been taken in Sheffield and in the matter of diagnosis nothing has been left undone to assist the medical practitioner. A doctor who has reason to suspect the presence of the disease may refer his case to a Voluntary Hospital or to the Municipal General Hospital where the services of a specialist are at once available and where all the facilities of the hospital and of the Radium Centre are at the disposal of the patient.

The problem which now remains is to secure that in every possible instance the disease is diagnosed at a sufficiently early stage to enable the sufferer to derive the utmost benefit from the modern methods of treatment which have been provided. This can only be attained when the educating of the general public to an appreciation of the extreme importance of early recognition of the symptoms of Cancer is fully accomplished.

Consideration has been given to the extending of the arrangements at the Radium Centre for the investigation of the circumstances attaching to the onset of the disease amongst patients treated by Radiation. It was recognised that a widening of the sphere of investigation was necessary and in the latter months of the year 1937 definite measures were taken to this end. The Municipal and Voluntary Hospitals are participating along with the Radium Centre in the new arrangements and all cases under treatment or having undergone treatment in these hospitals are included amongst those to be investigated. Particulars of all deaths classified as due to malignant disease are also transmitted to the Radium Centre. In many instances the investigation necessitates an enquiry from patients in their homes, or from relatives. Two important underlying objects are to ascertain what numbers of Cancer patients suitable for radiation treatment do not receive it and what are the reasons for their failure to do so. Such an investigation entails somewhat exhaustive enquiries but it should be stated that the investigation relates not only to cases where there has been treatment by radiation but to all cases of the disease which have come under notice, of whatever character and from whatever source. In regard to these cases it is hoped, from the data which is obtained, that there may be established a statistical record complete as to history and treatment and in many other essentials.

Tuberculosis.—There were 902 notifications of Tuberculosis of the Respiratory System in 1937 and the incidence rate was 1·74 per 1,000 of the population as against a rate of 2·02 per 1,000 in 1936. There were 207 notifications of Other Forms of Tuberculosis in 1937, giving an incidence rate of 0·40 per 1,000 as against 0·39 for 1936. The numbers of notifications of Tuberculosis in each year since 1927 are given in Table IX. on page 31.

The 1937 death rate from Tuberculosis of the Respiratory System was 0.685 per 1,000 of the population and from Other Forms of Tuberculosis 0.114 per 1,000, the rates for 1936 being 0.581 and 0.100 respectively. The 1937 England and Wales rates were 0.584 for Tuberculosis of the Respiratory System and 0.111 for Other Forms of Tuberculosis.

Death rates from Tuberculous Diseases per million of the population since the year 1927 are given below :—

Death Rate per Million from Tuberculosis.

				•	
Year			Respiratory System	$\begin{array}{c} { m Other} \\ { m Forms} \end{array}$	All Forms

1937			685	 114	 799

Table F. on page 18 gives the death rates from Tuberculosis (All Forms) and Tuberculosis of the Respiratory System for England and Wales and in towns of over 200,000 population since the year 1927. In this table the rates quoted for the years 1927 to 1936 are those ascertained by the Registrar General and published in the Statistical Reviews. The 1937 rates have been obtained from the several towns and it will be seen that as regards both Respiratory System and All Forms only four towns had lower death rates. The Sheffield figures were very considerably below those of most of the other towns.

The Chart which accompanies the table shows Tuberculosis death rates for Sheffield and for England and Wales and also the average rates of the Great Towns in each year since 1913. Sheffield's improved position is clearly demonstrated, the rise during the War years and the subsequent fall being shown very graphically.

The following table shows sex mortality from Tuberculosis since the year 1927.

TABLE E.—Tuberculosis Mortality in Sexes.

	System	14.4	13.4	12.7	13 · 1	11.6	12.6	10.6	9.7	7.4	6.6	6.1

Table G shows that from 1886 there was no decrease in the percentage of deaths amongst grinders from Tuberculosis of the Respiratory System until the quinquennium 1931-1935. On the other hand the percentage of deaths from this disease amongst all persons over 15 years of age has consistently fallen.

**TABLE H.**—Mortality from Tuberculosis of the Respiratory System amongst Grinders, and Cutlers and amongst all persons over 15 years of age during the ten years 1928-1937.

Trades	Workers employed over 14 years of age				Tube	erculos	Morta sis of H	lity fro Respira	om tory Sy	østem.		
	(Census 1931).		1928	1929	1930	1931	1932	1933	1934	1935	1936	1937
Grinders	4,600	$\left. egin{array}{ll} Number \\ of Deaths \\ Rate per \\ 1,000 \end{array} \right\}$	30 6·5	$\begin{vmatrix} 33 \\ 7 \cdot 2 \end{vmatrix}$	28 6·1	36 7·8		19 4·1	19 4·1	22 4·8	14 3·0	17 3·7
Cutlers	3,635	Number of Deaths Rate per 1,000	4	8 2 · 2	10	8 2 • 2	11 3·0	14 3·9	14 3·9	$6$ $1 \cdot 7$	9 2.5	5
All persons over 15 years of age in Sheffield	387,579	Number of Deaths Rate per 1,000	372 1·0	402	346 0·9	343 0·9		354 0·9	325	356 0·9	297	351 0·9

Table H shows that the death rate from Respiratory Tuberculosis amongst grinders in 1937 is still over four times the rate for all persons over 15 years of age in Sheffield.

Infant Mortality.—There were 437 deaths of Infants under one year of age in 1937 as compared with 468 in 1936. The infant mortality rate of 59 per 1,000 live births in 1936 thus fell to 55 per 1,000 in 1937.

In the following Table are given the infant mortality rates for Sheffield and for England and Wales during the past 20 years. It will be noted that prior to the year 1933 the Sheffield rate was consistently higher than the England and Wales rate. In 1933 the City rate fell below that of England and Wales and this relationship was still maintained in 1937.

TABLE I.—Infant Mortality, Sheffield and England and Wales, since the year 1918.

Year	Infant	Mortality England	Year		Mortality   England

1927	91	70	1937	55	58
J.					1

Table J, which follows, gives details of the causes of death of Infants under one year of age for a period of ten years, and during this time a marked decline is shown in most of the causes.

Premature birth is still responsible for the largest number of deaths of infants.

TABLE J.—Infant Mortality from stated causes, years 1928—1937.

Totals	 619	698	522	533	543	454	416	400	468	437

NEO-NATAL MORTALITY.—Deaths of infants occurring within the first four weeks of life numbered 245 giving a neo-natal mortality rate of 31 per 1,000 live births as against a rate of 32 per 1,000 in 1936. The neo-natal deaths in 1937 comprise 56 per cent. of the total deaths of children under one year of age.

The Puerperal State.—By the provisions of the Public Health Act 1936 all sickness which, prior to 1st October 1937, was notifiable under one or other of the titles of Puerperal Fever and Puerperal Pyrexia became notifiable at that date under the single title of Puerperal Pyrexia. For convenience all notifications relating to the year 1937 have been recorded under the heading of Puerperal Pyrexia. 226 cases were notified during the year and the incidence rate, calculated per 1,000 total (live and still) births, was 27·22 as against a combined incidence rate for Puerperal Fever and Puerperal Pyrexia of 20·00 in 1936.

The 1937 death rate from Puerperal Sepsis was 1.57 per 1,000 total (live and still) births as against 1.34 per 1,000 in 1936. The death rate from All Puerperal Causes, which was 3.90 per 1,000 total (live and still) births in 1936, fell to 3.37 per 1,000 in 1937 in which year the corresponding England and Wales rate was 3.11 per 1,000. Table XIII. on page 33 gives for recent years the Puerperal Fever and Puerperal Pyrexia incidence rates of Sheffield under the single title of Puerperal Pyrexia, the City death rates from Puerperal Sepsis and from other Puerperal Causes and also comparative figures of the death rates of Sheffield and England and Wales from All Puerperal Causes.

In considering the maternal mortality rate it is apparent that account must be taken of the significance of deaths from abortion. Each year there are certain deaths from post abortive sepsis and from abortion not returned as septic which, as they are not identified as abortion criminally procured, are classed to the puerperal state and so contribute to the death rate under this heading. Septic abortion is in the main a condition which is beyond the control of preventive medicine and if the facts of each case could be proved it might transpire that the great majority of the deaths from septic abortion which have been classed to the puerperal state would rightly fall into one of the various categories of criminal abortion which are classed as deaths from violence.

It will be seen from Table K. which follows that nine deaths from abortion in Sheffield were classed to the puerperal state in 1937. All were cases of post abortive Sepsis and they represent as high a proportion as  $32 \cdot 14$  per cent of the total deaths in the puerperal state. It is interesting to record that when these septic abortions are disregarded the death rate from all puerperal causes becomes the comparatively low one of  $2 \cdot 29$  per 1,000 total (live and still) births.

Special investigations were made into each maternal death and the particulars forwarded to the Ministry of Health.

TABLE K.—Deaths from Abortion in relation to all Deaths from Diseases of Pregnancy, Childbirth and the Puerperal State in Sheffield and in England and Wales during the five years 1933 to 1937.

				Number	of Deaths		Percentage	of Abortion		
	Year		All Puerpe	eral Causes	to an i der	perar Causes

1937			 28	*	9	* 32.14 *				

<sup>\* 1937</sup> figures not available for England and Wales.

Statistics relating to England and Wales and eighteen towns of over 200,000 population in England and Wales as regards birth rate and infant mortality and the death rate from all causes and from certain specified causes. The adjusted death rate from all causes for the several towns is obtained by applying to the crude death rate an Areal Comparability Factor which is furnished by the Registrar General in regard to each area. The adjustment allows for the difference between the sex and age constitution of the population of the area and that of England and Wales as a whole at the latest census, and a more accurate comparison of the general death rates in the various localities is thus secured. Sheffield's comparability factor is 1·13 and it will be noted that whereas eleven of the eighteen towns had higher crude death rates than Sheffield, only seven had higher rates after the adjustment. Eight of the towns had higher birth rates than Sheffield, fourteen had higher infant mortality rates and eight had higher death rates from all puerperal causes.

REGISTRATION SUB-DISTRICTS AND MUNICIPAL WARDS.

Under the Births and Deaths Registration Scheme of the Sheffield City Council which came into operation on 1st April 1935 the City is divided into six Registration Sub-Districts each comprising two, three, four or five Municipal Wards as set out below:—

Registration Sub-Dis	trict.	Municipal Wards therein.
Sheffield North		 Neepsend and Firth Park.
Sheffield Central		 St. Peter's, Sharrow and Broomhill.
Sheffield South-West		 Woodseats, Nether Edge, Hallam, Ecclesall and Norton.
Sheffield North-East		 Brightside, Burngreave, Attercliffe, Tinsley and Darnall.
Sheffield North-West		 Hillsborough, Owlerton, Walkley, Crookesmoor and St. Philip's.
Sheffield East		 Park, Manor, Heeley, Handsworth and Moor.

Commencing with the year 1935 statistics have been presented relating to these municipal wards to replace those for the old registration sub-districts the boundaries of which, with the exception of Handsworth registration sub-district, were not identical with the municipal ward boundaries. It will be appreciated that although there is considerable advantage in the new practice it nevertheless renders impossible comparisons between the present time and years prior to 1935 so far as concerns the statistics of registration sub-districts.

Table IV. on page 26 gives the estimated population, the acreage, the density of the population, the death rates from all causes and from certain specified causes, the infant mortality rates and the birth rates in each of the municipal wards of the City. Sickness from infectious and other notifiable diseases in these wards is given in Table XV on page 34.

### HOSPITALS.

In the table on the following page is presented a classification of the available accommodation at the end of the year 1937 at the Municipal Hospitals and Institutions and at the Voluntary Hospitals. All these Institutions, with the exception of the Wadsley Mental Hospital, are situated within the City boundary. This latter Institution, although it is located just outside the City, is included in the table on account of the very large proportion of Sheffield residents which it accommodates.

Full particulars with regard to the year's working at the various Municipal Hospitals are to be found in the reports by Dr. James Clark, Dr. H. Midgley Turner and Dr. C. Lee Pattison, which follow under their several headings.

### CITY HOSPITAL FOR INFECTIOUS DISEASES.

Medical Superintendent ... ... James Clark, M.D., F.R.C.P., D.P.H.

Senior Medical Officer ... Joseph M. Kennedy, M.B., Ch.B., D.P.H.

Assistant Medical Officers :-

HENRY CECIL WILLIAMSON, M.B., B.Ch., B.A.O. JOHN JOSEPH WALLS, M.B., B.Ch., B.A.O., L.M.

CYRIL SOUTH, M.B., (h.B., B.Sc.

Nursing Staff:—Matron, Assistant Matron, 2 Night Superintendents, Sister Tutor, Home Sister, and 97 other Nursing Staff.

Accommodation: -438 beds.

There was a decrease in the number of Diphtheria cases admitted during the year, the figure being 1,628 as compared with 1,951 in 1936. The number of deaths from Diphtheria was markedly reduced, there being 41 deaths as against 84 in 1936.

The incidence of Scarlet Fever was comparatively low, only 793 cases were admitted. It was noted that the disease was of an extremely mild type, no deaths having occurred from the cases admitted.

Measles was not epidemic during the year, but 58 cases were admitted, with one death.

16 Cases of Cerebro-Spinal Fever were treated to a conclusion, with 9 deaths.

ERYSIPELAS.—79 cases were admitted, with no deaths. They were all treated with Sulphanilamide, and we have found excellent results from this new remedy.

Enteric Fever.—There were 13 cases admitted, and all recovered.

It will be seen that in the tables on pages 55 and 56 there is reference to "imported" cases. These are cases admitted from outside the City by arrangements with the local authorities of neighbouring areas.

The total number of cases admitted during the year was 2,781. Admissions in 1937 and the five previous years were as follows:—

Year.		Number of Admissions
1932	• •	2278
1933	• •	3176
1934		3861
1935		3956
1936		3664
Five years' average, years	1932-36	3387
1937		2781

## OPERATIONS.

The following operations were performed, for which general anæsthesia was required in 41 cases, the remainder being performed under local anæsthesia:—

Antrotomies (Mastoid)	 	 	<b>1</b> 0
Tracheotomies	 	 	<b>1</b> 0
Lumbar Punctures	 	 	176
Suppurative Adenitis	 	 	21
Miscellaneous	 	 	<b>2</b> 8
Tonsillectomy	 	 	3
Laparotomy	 	 	1
Intubation	 	 	2
Rib Resection	 	 	4

### TABLE XXXIV.—Number of Cases treated in Observation Ward.

This block continues to be of great value for isolating doubtful cases and mixed infections from the Wards, or on admission. It is also used for cases of disease for which no general wards are available.

Remaining	Admission	s from	Discharged	Transferred		Remaining
31/12/36	Ambulance	Wards	from Block	to Wards	Deaths	31/12/37
20	318	124	314	114	11	23

### RETURN CASES.

These are patients who may possibly have contracted the disease from a patient discharged from Hospital within 28 days. There are always a certain number of these connected with cases when discharged from either the sick room or a Hospital. Many of them, however, have been proved to be due to the unearthing of infection when making preparations for the return of a case home.

Disease		Discharges	Certified Return Cases	Possible Return Cases	Return Rate
Scarlet Fever Diphtheria	 	784 1,383	27 20	16 10	$\begin{array}{c} 2 \cdot 04 \\ 0 \cdot 72 \end{array}$

### SCARLET FEVER.

As regards the cases referred to above, these may possibly be due to the return home of the primary cases. 26 of the secondary cases were admitted into Hospital and verified. 10 were definitely not "return" cases.

### DIPHTHERIA.

These again are in all probability due to the return home of the primary cases, although three negative cultures are obtained before the discharge of the patient takes place. 19 of the secondary cases were admitted into Hospital and verified, 9 were definitely not "return" cases.

### AMBULANCE DEPARTMENT.

On 31st December, 1937 there were four Austin Ambulances stationed at the Hospital. These ambulances are used for the conveying of patients to Lodge Moor Hospital and also patients to and from the Tuberculosis Hospitals at Winter Street, Crimicar Lane, Commonside and Nether Edge, and to the Tuberculosis Dispensary, Queen's Road for X-Ray. The ambulances covered 39,418 miles in these services during the year 1937.

### TABLE XXXV.

## BACTERIOLOGICAL WORK CARRIED OUT AT LODGE MOOR HOSPITAL.

Bacteriological work has been entirely done by the Resident Medical Officers at Lodge Moor Hospital, the media on which organisms are grown having been prepared in the Hospital Laboratory.

Virulence and typing of the C. diphtheriæ have been carried out by Professor Edington, Sheffield University.

### Examinations Carried out during 1937.

All members of the Nursing and Domestic Staff, on joining, are vaccinated, and inoculated against Enteric Fever with T.A.B. They are also Schick and Dick Tested, and if positive, immunised. Toxoid Antitoxin Floccules has been used to immunise those members of the staff who were found susceptible to Diphtheria, which has proved more satisfactory.

No member of the Staff developed Diphtheria after being immunised.

# CITY GENERAL HOSPITALS.

# TABLE XXXVIII.—DISCHARGES AND DEATHS.

	MEN.	WOMEN.	CHILDREN.	TOTAL.
Discharged to Town  Discharged to Fir Vale House  Discharged to Nether Edge Hospital  Discharged to Children's Homes  DEATHS	1555 105 15 1 642	3794 47 31 3 453	2550 3 1 99 185	7899 155 47 103 1280
Total Discharged and Died	2318	4328	2838	9484
Remaining in Hospital, 31st December, 1937	197	288	163	648

The total admissions and births was 9,515, an increase of 5 over last year.

There was a decrease of 206 men and 158 women admitted from town. Admissions from Fir Vale House show a decrease of 43 men and 1 woman, and from Nether Edge Hospital a decrease of 1 man and 2 women. There was a decrease of 9 children admitted from Nether Edge Hospital and an increase of 6 from the Homes. Births show an increase of 74, and there is also an increase of 342 children admitted from town, showing a total increase of 413 children admitted and born.

The average daily number under treatment was 665·21, an increase of 15·26 over last year.

The highest daily number was 754 on the 21st September, and the lowest number was 625 on the 25th December.

The average duration of treatment was 23.96 days, an increase of .54 days from last year (last year's figure being 23.42 days and the lowest on record for the hospital).

The number of patients in hospital throughout the whole year was 9, an increase of 1 from last year.

Every section of the hospital was subject to considerable pressure throughout the year, as will be shown in the appropriate parts of the report.

There was a very considerable increase in the surgical work and towards the end of the year we were faced with an increasing waiting list, especially of women and children.

In the Maternity Section it was necessary to put up extra beds at times, owing to the increase in emergency cases coming into hospital. The new wing nearing completion will give much needed relief to this department and also improve our isolation accommodation.

The greatest difficulty, however, was experienced on the medical side. The shortage of accommodation for chronic sick and infirm patients in Fir Vale House and Nether Edge Hospital has necessitated patients being retained in hospital after they could have been discharged, had suitable accommodation been available. For a considerable portion of the year approximately 200 medical beds were occupied by such patients.

The additional accommodation at Fir Vale House, at present nearing completion, should give some relief for a time. The increasing demand for institutional treatment for this type of patient will, in my opinion, necessitate further provision, even after the whole of the present scheme at Fir Vale House is completed.

#### TABLE XXXIX.

Admissions.

CLASSIFICATION OF DISEASES.

Infectious and Parasitic Diseases :-

Enteric Fever 3, Paratyphoid Fever 1, Measles 12, Scarlet Fever 3, Whooping Cough 2, Diphtheria 32, Influenza 41, Erysipelas 12, Post Encephalitis 7, Cerebro-spinal Meningitis 3, Tuberculous Meningitis 6, Tuberculous Peritonitis 8, Tuberculosis of Lungs 43, Tuberculosis of Hip Joint 1, Tuberculosis of Kidney 1, Tuberculoma of Brain 1, Spinal Caries 4, Miliary Tuberculosis 3, Spondylitis 1, Polio-encephalitis 1, Syphilis 41, Specific Aortitis 7, Gonorrhæa 6, Septic Sores 11, Septicæmia 2, Ophthalmia Neonatorum 3, Chickenpox 8, Tapeworm 1, Pink Disease 1, Dysentery 24. Total 289.

Cancer and Other Tumours :-

Cancer of Lip 1, Cancer of Jaw 1, Cancer of Floor of Mouth 7, Cancer of Tongue 3, Cancer of Pharynx 1, Cancer of Larynx 2, Cancer of Esophagus 4, Cancer of Stomach 38, Cancer of Pancreas 4, Cancer of Colon 37, Cancer of Rectum 22, Cancer of Gall Bladder 2, Cancer of Liver 9, Cancer of Bile Duct 2, Cancer of Lungs 23, Cancer of Uterus 32, Cancer of Vulva 2, Cancer of Ovary 7, Cancer of Vagina 1, Cancer of Breast 14, Cancer of Kidney 1, Cancer of Bladder 3, Cancer of Penis 2, Cancer of Scrotum 1, Cancer of Prostate 6, Cancer of Testis 1, Rodent Ulcer 3, Epithelioma of Skin 4, Sarcoma of Femur 3, Sarcoma of Ilium 2, Sarcoma of Tibia 2, Sarcoma of Humerus 1, Melanotic Sarcoma 1, Lympho-sarcoma of Lung 2, Sarcomatosis 2, Neoplasm of Mediastinum 2, Uterine Fibroid 48, Ovarian Cyst 18, Cervical Polypus 14, Bartholin's Cyst 4, Adenoma of Cervix 1, Endometrioma 2, Rectal Polypus 1, Cerebral Tumour 6, Abdominal Tumour 2, Nasal Polypus 5, Papilloma of Bladder 1, Lipoma 2, Sacral Teratoma 1, Thyroid Cyst 2. Total 355.

Rheumatism, Diseases of Nutrition and of Endocrine Glands, and Other General Diseases:—

Acute Rheumatism 35, Sub-acute Rheumatism 13, Fibrositis 3, Rheumatoid Arthritis 30, Infective Arthritis 6, Diabetes Mellitus 75, Rickets 1, Chronic Rheumatism 7, Exophthalmic Goitre 9, Myxædema 7, Obesity 1, Hypoglycæmia 2. Total 189.

Diseases of the Blood and Blood-Forming Organs :-

Purpura Hæmorrhagica 3, Hæmophilia 2, Pernicious Anæmia 24, Splenic Anæmia 2, Secondary Anæmia 10, Aplastic Anæmia 1, Mycrositic Anæmia 1, Anæmia 4, Myclogenous Leukæmia 1, Lymphatic Leukæmia 2, Lymphadenoma 1. Total 51.

Chronic Poisoning :-

Alcoholism 4, Nicotine Poisoning 1. Total 5.

Diseases of the Nervous System and Sense Organs :-

Pneumococcal Meningitis 5, Lymphocytic Meningitis 11, Streptococcal Meningitis 2, Cerebral Hæmorrhage 60, Cerebral Thrombosis 103, Cerebral Embolism 2, Cerebral Abscess 6, Bulbar Palsy 2, Epilepsy 20, Jacksonian Epilepsy 2, Subarachnoid Hæmorrhage 2, Chorea 21, Huntingdon's Chorea 2, Infantile Convulsions 3, Hysteria 9, Neurasthenia 50, Amnesia 2, Mania 4, Melancholia 6, Confusional Insanity 7, Delusional Insanity 1, Dementia Præcox 1, Mental Deficiency 4, Disseminated Sclerosis 3, Tabes Dorsalis 7, Dementia Paralytica 5, Progressive Muscular Atrophy 1, Spastic Paraplegia 1, Neuritis 9, Sciatica 10, Neuralgia 1, Tic 1, Subacute Combined Degeneration 1, Cellulitis of Orbit 3, Glaucoma 1, Conjunctivitis 6, Wound of Eyelid 1, Otitis Media 20, Labyrinthine Vertigo 2, Mastoiditis 11, Contusion of Eye 1. Total 409.

Diseases of the Circulatory System :-

Pericarditis 5, Infective Endocarditis 5, Aortic Regurgitation 8, Mitral Stenosis 92, Mitral Regnrgitation 4, Coronary Atheroma 12, Heart Block 1, Aortic Aneurysm 2, Arterio Sclerosis 345, Scnile Gangrene 18. Varicocele 3, Varicose Ulcer 12, Hæmorrhoids 50, Adenitis 19, Glandular Abscess 9, Phlebitis 10, Epistaxis 5. Lymphangitis 2, Raynand's Disease 1. Total 603.

Diseases of the Respiratory System :-

Chronic Rhinitis 3, Sinusitis 1, Deflected Nasal Septum 1, Bronchitis 280, Bronchiectasis 12, Broncho-pneumonia 513, Lobar Pneumonia 407, Empyema 26, Pleurisy 20, Asthma 30, Abscess of Lung 7, Pneumothorax 4, Emphysema 5, Silicosis 2, Hæmoptysis 1, Calcified Mediastinal Gland 1, Laryngitis 1. Total 1,314.

Diseases of the Digestive System :-

Alveolar Abscess 8, Pyorrhæa 3, Stomatitis 5, Salivary Calculus 1, Enlarged Tonsils and Adenoids 400, Tonsillitis 119, Peritonsillar Abscess 6, Dysphagia 2, Gastric Ulcer 58, Perforated Gastric Ulcer 17, Gastro-jejunal Ulcer 1, Gastro-colic Fistula 1, Pyloric Stenosis 12, Duodenal Ulcer 36, Perforated Duodenal Ulcer 8, Gastritis 16, Achlorhydria 2, Hyperchlorhydria 2, Dyspepsia 3, Intestinal Colic 29, Volvulus of Small Bowel 1, Enteritis 72, Constipation 32, Intussusception 1, Perforation of Small Bowel 1, Fæcal Fistula 2, Intestinal Obstruction (due to adhesions) 5, Appendicitis 245, Colitis 5, Stricture of Colostomy 1, Obstruction due to Band 3, Diverticulitis 3, Gangrene of Intestine 3, Visceroptosis 1, Fistula in Ano 11, Fissure in Ano 4, Ischio-rectal Abscess 23, Cirrhosis of Liver 1, Catarrhal Jaundice 13, Gallstones and Cholecystitis 53, Chronic Pancreatitis 3, Proctitis 1, Pneumococcal Peritonitis 1, Abdominal Abscess 1, Inguinal Hernia 182, Femoral Hernia 17, Umbilical Hernia 13, Incisional Hernia 13, Strangulated Hernia 28. Total 1,468.

# Non-Venereal Diseases of the Genito-Urinary System :-

Acute Nephritis 27, Chronic Nephritis 35, Contusion of Kidney 1, Perinephric Abscess 2, Pyonephrosis 3, Pyelitis 38, Hæmaturia 3, Hydronephrosis 2, Pyelonephritis 5, Renal Calculus 16, Renal Colic 23, Bladder Calculus 7, Ureteric Calculus 2, Cystitis 18, Vesico-vaginal Fistula 2, Cystocele 18, Urethral Stricture 11, Urethral Caruncle 4, Perineal Abscess 2, Enlargement of Prostate 40, Epididyno-orchitis 7, Hydrocele 10, Phimosis 4, Salpingitis 14, Tubo-ovarian Abscess 12, Pelvic Cellulitis 4, Retroversion of Uterus 4, Subinvolution of Uterus 2, Lacerated Cervix 2, Cervicitis 22, Endometritis 11, Shroeder's Disease 2, Uterine Prolapse 24, Menstruation 5, Dysmenorrhæa 30, Metrorrhagia 17, Menorrhagia 28, Sterility 9, For Sterilisation 2, Menopause 2, Amenorrhæa 1, Rupture of Bladder 1, Oxaluria 1, Prostatitis 4, Spermatocele 2, Vaginal Tear 1, Bartholin's Abscess 6, Vulvo-vaginitis 2, Leucorrhæa 2. Total 490.

# Diseases of Pregnancy, Childbirth and the Puerperium :-

Abortion 403, Ectopic Gestation 3, Hydatidiform Mole 3, Carneous Mole 1, Puerperal Fever 5, Pyelitis of Pregnancy 12, Toxemia of Pregnancy 35, Phlegmasia Alba Dolens 2; Torn Perineum 5, Insanity of Pregnancy 1, Breast Abscess 61, Pregnancy 1,656, Lactation 25, Puerperium 9, Chorea Gravidarum 2. Total 2,223.

### Diseases of the Skin and Cellular Tissue :-

Carbuncle 20, Furunculosis 7, Abscesses and Cellulitis 74, Dermatitis 76, Herpes 1, Psoriasis 4, Ulcer 16, Scabies 31, Erythema Nodosum 2, Impetigo 18, Pediculosis 4, Sycosis 4, Eczema 3, Sebaceous Cyst 1, Urticaria 2, Erythema Multiformi 5, Pemphigus 2, Elephantiasis of Leg 1, Deformity of Nail 1. Total 272.

# Diseases of the Bones and Organs of Locomotion :-

Osteomyelitis 20, Paget's Disease of Bone 6, Periostitis 3, Synovitis 4, Hallux Valgus 5, Prepatellar Bursitis 19, Hammer Toe 1, Genu Valgum 1, Torn Cartilage 5, Myalgia 3, Hypertrophic Muscular Dystrophy 1, Muscular Atrophy 1, Sacrococcygeal Sinus 3, Coccydinia 1, Exostosis 1, Dupuytren's Contraction 1, Deltoid Paralysis 1. Total 76.

# Congenital Malformations :-

Spina Bifida 4, Congenital Heart Disease 1, Imperforate Anus 2, Cleft Palate 1, Cystic Disease of Lungs 1, Megacolon 1, Hydrocephalies 1, Bicornuate Uterus 2, Nævus 1. Total 14.

# Diseases of Early Infancy :—

Malnutrition 17, For Regulation of Diet 4, Debility from Birth 6, Atelectasis 1, Asphyxia Neonatorum 4, Melæna Neonatorum 1, Mastitis Neonatorum 1, Suckling 109, Subtentorial Hæmorrhage 4, Pemphigus Neonatorum 4, Infants Born 1,190. Total 1,341.

Diseases of Old Age :-

Senile Dementia 1, Senility 7. Total 8.

Injuries and Violence :-

Suicide by Poisoning 15, Suicide by Coal Gas 10, Suicide by Attempted Drowning 2, Suicide by Hanging 1, Suicidal Cut Throat 5, Food Poisoning 4, Accidental Poisoning (Liniment) 1, Burns 36, Wounds 35, Dog Bite 1, Foreign Bodies Embedded 10, Fractures 135, Contusions 41, Dislocations 5, Concussion 41, Sprains 2, Contusion of Kidney 1, Rupture of Liver 1. Total 346.

### Ill-Defined Diseases :-

N.A.D. 56, P.U.O. 6. Total 62. Grand Total — 9,515.

#### DEATHS.

During the year 1,280 patients died in the hospital, a decrease of 16 from last year.

The following list shows the figures for the commoner diseases during the last three years :—

			1935	1936	1937
Arterio Sclerosis		 	320	308	262
Bronchitis		 	86	107	110
Tuberculosis of the L	ungs	 	11	6	16
Lobar Pneumonia		 	96	75	80
Broncho-pneumonia		 	43	65	162
Valvular Disease of the	e Heart	 	48	48	40
Malignant Disease		 	201	181	156

In Table XL. the diseases causing death are classified, and in Table XLI. the ages at death for the last three years are set out. In Table XLII. the causes of death of infants under one year are given. This figure shows an increase of 4 from last year. The great majority of children who died were premature or feeble from birth.

#### TABLE XL.

Causes of Death.

Infectious and Parasitic Diseases:-

Influenza, Broncho-pneumonia 2, Measles, Broncho-pneumonia 1, Meningococcal Meningitis 2, Dysentery 1, Erysipelas 1, Tuberculous Meningitis 4, Tuberculosis of Lungs 16, Tuberculous Peritonitis 2, Miliary Tuberculosis 2, Syphilis 10, Agranulocytosis and Septicæmia 1, Pyogenic Infection of Skin 1. Total 43.

# Caneer and Other Tumours :-

Cancer of Floor of Mouth 6, Cancer of Tongue 2, Cancer of Maxillary Antrum 1, Cancer of Pharynx 1, Cancer of Larynx 1, Cancer of Esophagus 2, Cancer of Stomach 26, Cancer of Liver 6, Cancer of Pancreas 4, Cancer of Gall Bladder 2, Cancer of Common Bile Duct 1, Cancer of Ampulla of Vater 1, Cancer of Rectum 11, Cancer of Colon 27, Cancer of Lung 18, Cancer of Bronchus 1, Cancer of Uterus 5, Cancer of Ovary 2, Cancer of Breast 9, Cancer of Penis 1, Cancer of Bladder 2, Cancer of Prostate 5, Cancer of Skin 3, Cancer of Vagina 1, Cancer of Vulva 1, Cancer of Kidney 2, Cancer of Testis 1, Cancer of Abdomen (organ uncertain) 1, Cancer of Brain 1, Hypernephroma of Kidney 1, Retroperitoneal Sarcoma 3, Generalised Sarcomatosis 1, Sarcoma of Femur 2, Sarcoma of Tibia 1, Sarcoma of Thigh 1, Sarcoma of Ilium 1, Sarcoma of Mediastinum 1, Lymphosarcoma 2, Cerebral Tumour 3, Ovarian Cyst 1. Total 161.

Rheumatism, Diseases of Nutrition and of Endoerine Glands, and Other General Diseases:—
Rheumatoid Arthritis 3, Diabetes 21, Exophthalmic Goitre 3. Total 27.

Diseases of the Blood and Blood-Forming Organs :-

Purpura Hamorrhagica 3, Pernicious Anamia 2, Aplastic Anamia 1, Lymphatic Leukamia 2, Lymphadenoma 1. Total 9.

Chronic Poisoning :-

Nil.

Diseases of the Nervous System and Sense Organs :-

Pneumococcal Meningitis 4, Streptococcal Meningitis 4, Tabes Dorsalis 1, Subacute Combined Degeneration 1, Subarachnoid Hæmorrhage 2, Cerebral Embolism 2, Acute Encephalitis 1, Dementia Paralytica 1, Status Epilepticus 1, Chorea 1, Neurasthenia 1, Peripheral Neuritis 2, Progressive Muscular Atrophy 1, Mastoiditis with Meningitis 5, Mastoiditis with Cerebral Abscess 5. Total 32.

Diseases of the Circulatory System :-

Pericarditis 6, Infective Endocarditis 4, Aortic Regurgitation 6, Mitral Stenosis 33, Mitral Regurgitation 1, Aortic Aneurysm 1, Coronary Occlusion 6, Arterio Sclerosis 266, Senile Gangrene 18, Phlebitis 1, Cervical Adenitis 1. Total 343.

Diseases of the Respiratory System :-

Bronchitis 110, Bronchiectasis 4, Broncho-pneumonia 162, Lobar Pneumonia 80, Hypostatic Pneumonia 2, Pulmonary Embolism 2, Abscess of Lung 3, Asthma 1, Silicosis 1, Empyema 6, Pleural Effusion 2. Total 373.

Diseases of the Digestive System :-

Stomatitis and Septicæmia 1, Septic Throat and Septicæmia 2, Perforated Gastric Ulcer 9, Chronic Gastric Ulcer 6, Gastritis 1, Perforated Duodenal Ulcer 7, Enteritis 10, Achlorhydria 1, Pyloric Stenosis 1, Strangulation by Band 2, Intussusception 1, Acute Appendicitis 5, Ulcerative Colitis 3, Perforated Diverticulitis 1, Cirrhosis of Liver 1, Gallstones and Cholecystitis 2, Fæcal Fistula 1, Abscess of Abdominal Wall 1, Ischiorectal Abscess 3, Pneumococcal Peritonitis 1, Strangulated Inguinal Hernia 2, Strangulated Femoral Hernia 5, Strangulated Umbilical Hernia 6. Total 72.

Non-Venereal Diseases of the Genito-Urinary System :-

Acute Nephritis 3, Chronic Nephritis 26, Pyonephrosis 1, Pyelonephritis 2, Renal Calculus 1, Vesical Calculus 1, Rupture of Bladder 1, Cystitis 5, Enlarged Prostate 18, Stricture of Urethra 7, Abscess of Epididymis 1, Perinephric Abscess 1. Total 67.

Diseases of Pregnancy, Childbirth and the Puerperium:

Abortion and Septicæmia 10, Puerperal Septicæmia 1, Eclampsia 1, Retained Placenta and Postpartum Hæmorrhage 1, Puerperium, Suppression of Urine 1. Total 14.

Diseases of the Skin and Cellular Tissue :-

Carbuncle 2, Cellulitis 1, Abscess 2, Pemphigus 2, Exfoliative Dermatitis 1. Total 8.

Diseases of the Bones and Organs of Locomotion :-

Osteomyelitis 1, Osteitis Deformans 2. Total 3.

Congenital Malformations :-

Spina Bifida 4, Congenital Heart Disease 2. Total 6.

Diseases of Early Infancy :-

Marasmus 6, Debility from Birth 6, Prematurity 47, Intracranial Hæmorrhage 4, Asphyxia Neonatorum 3, Atelectasis 1, Pemphigus 3, Icterus Neonatorum 1, Infantile Convulsions 2. Total 73.

Deaths from Violence :--

Poisoning 4, Gas Poisoning 1, Suicidal Cut Throat 2, Burns 5, Wound 3, Fractures 31, Contusions 2, Strangulation by Hanging 1. Total 49.

# MEDICAL WORK.

. .

The work in the Medical Wards has been much the same as in former years. The number of cases of primary Pneumonia has exceeded all records, there being 920 in 1937 against 600 in 1936. There has been no true epidemic, but we have had Pneumonia cases coming in steadily during the whole of the year. The cause of the increase is that a higher percentage of the total Pneumonias of the City is being treated in this Hospital than formerly.

Appended is a short report by Dr. Milne, the Resident Physician.

Intussusception Gangrene of Bowel ...

Glandular Abscess of Neck and Toxæmia

Pemphigus Neonatorum Subtentorial Haemorrhage

Cerebral Abscess

Dyscntery

Pyogenic Infection of Scalp

#### REPORT BY DR. K. J. G. MILNE.

The work on the medical cases has been carried out both in the medical wards and in the Medical Out-Patient Clinics.

The investigation of medical cases has been amplified in scope by the extension and increased equipment of the Hospital Laboratory at the beginning of 1937. It is now possible to perform more detailed clinical tests with the aid of new specialised apparatus. Of these tests, may be mentioned the determination of the metabolic rate in patients suffering from diseases of the thyroid gland and the state of the action of the heart by the electrocardiogram. These new methods have resulted in a marked increase in investigations on the medical patient.

Clinical work in the wards has proceeded on the usual lines and the Creosote Chamber and Oxygen Tent have continued to be effective aids to treatment.

The treatment of patients suffering from pernicious anamia has continued on the lines laid down last year with satisfactory results. Several new drugs have been introduced and have established themselves as reliable remedies in certain diseases.

A clinical investigation was carried out on diabetic patients to test the effectiveness of new preparations of insulin. Results of this investigation have been communicated to the Medical Press.

The work of the Out-Patient Clinics has increased in scope and numbers. The system of appointments which has been in use since the inception of the clinics continues to prove most satisfactory in avoiding unnecessary waiting and overcrowding. An important feature of the work is the supervision of the patient who may require a special diet. This type of case is increasing in variety and number. The special clinic for pernicious anemia patients shows an increase in attendance and has saved the patients from much ill-health and from the need of in-patient treatment.

I am again indebted to our Almoner (Miss Glenn) for the great care and attention paid to the medical out-patients and for her courteous co-operation at all times. A close liaison is maintained between the work of the medical wards and the after-care of the patients at the Out-Patient Clinics.

Thus the Medical work of the hospital has maintained its progressive tendency during 1937.

#### SURGICAL WORK.

There was a steady increase in the amount of surgery work performed during the year, and there has been for a considerable part of the time a definite shortage of beds, even for surgical emergencies. This is particularly marked on the female side.

I am pleased to report there has been no further increase this year in the number of cases of malignant disease, in fact, there were 248 cases treated during 1937 as compared with 295 in 1936. The arrangement for the modern treatment of cancer by Radium and Deep X-Ray Therapy at the Radium Centre continues as before to work very satisfactorily. During the year 50 operations for the insertion of Radium were performed in this hospital. The Radium Director, or a member of his medical staff, visits the hospital regularly and keeps in touch with all cases of malignant disease. Treatment by Deep X-Ray Therapy is carried out at the Radium Centre, the patients being taken there by ambulance. After discharge, patients who are fit attend for consultation at the Radium Centre for follow up treatment and observation.

The total number of operations performed in the hospital was 2,659, an increase of 324 from 1936. The number of night emergency operations has shown a very marked increase during the last year, and the time of these operations is causing considerable strain upon the Resident Medical Staff.

A detail list of operations is given in Table XLIII.

Appended is a short report by Dr. Cameron, the Resident Surgeon.

### REPORT BY DR. D. H. W. CAMERON.

The work on the surgical side of the hospital has followed much on the same lines as last year. Surgical emergencies have at times taxed the capacity of the surgical beds available, but the waiting list cases have been admitted in reasonable time, so that no patient has suffered undue inconvenience.

The work in the Casualty Department has increased, with a corresponding increase in the number of minor operations performed there, thus avoiding the necessity for admission to the wards. The Fracture Clinic continued its work, with an increasing number of cases.

From the list of operations in Table XLIII., the extent and variety of the surgical work can be appreciated.

The arrangement whereby we take patients from the surgical waiting lists of the Royal Infirmary and Royal Hospital continued throughout the year, and in the 12 months 305 cases, of whom 235 were from the Royal Infirmary and 70 from the Royal Hospital, were admitted.

#### TABLE XLIII,

OPERATIONS.

Abdominal Operations :--

Appendicectomy 227, Cacostomy 3, Cholecystectomy 19, Cholecystostomy 10, Choledochotomy 2, Colostomy 14, Excision of Colon 5, Gastrojejunostomy 7, Intestinal Anastomosis 3, Laparotomy (Exploratory) 4, Laparotomy for Inoperable Cancer 7, Laparotomy for Acute Pancreatitis 1, Laparotomy for Tumour of Pancreas 1, Laparotomy for Hirschsprung's Disease 1, Laparotomy for Peritoneal Adhesions 1, Iliocolostomy 3, Intussusception 4, Closure of Gastrostomy 1, Closure of Colostomy 1, Closure of Fæcal Fistula 4, Perforated Duodenal Ulcer 10, Perforated Gastric Ulcer 23, Perforation of Small Bowel by Foreign Body 1, Rammstedt's Operation 5, Strangulation by Band 15, Volvulus 2. Total 374.

Operations for Hernia :-

Inguinal Hernia 165, Inguinal Hernia (Strangulated) 9, Femoral Hernia 9, Femoral Hernia (Strangulated) 16, Umbilical Hernia 11, Umbilical Hernia (Strangulated) 3. Incisional Hernia 5, Incisional Hernia (Strangulated) 1, Epigastric Hernia 1. Total 220.

Amputations :--

Thigh 7, Toe 1. Total 8.

Operations on Urinary Tract :-

Diathermy of Urethral Caruncle 5, Cystoscopy and Pyelography under Anæsthesia 12, Suprapubic Cystostomy 27, Diathermy of Bladder Papilloma 2, Nephrectomy 5. Perinephric Abscess 3, Perinethral Abscess 1, Dilatation of Urethral Stricture 11, Vesical Calculus 2, Foreign Body in Bladder 1, Suture of Ruptured Bladder 1. Total 70.

Operations on Male Genital Organs :-

Amputation of Penis 2, Circumcision 4, Excision of Testis 1, Hydrocele 10, Varicocele 3, Spermatocele 2, Prostatectomy 8, Prostatic Calculi 1. Total 31.

Operations on Female Generative Organs :-

Amputation of Cervix 1, Cæsarean Section 38, Colpoperineorrhaphy 37, Curettage of Uterus 94, Diathermy of Cervix 13, Evacuation of Uterus (Abortion) 286, Excision of Uterine Polyp 13, Excision of Vaginal Septum 1, Excision of Bartholin's Cyst 10, For Ectopic Gestation 2, For Hydatid Mole 1, For Inversion of Uterus 2, Hysterectomy 55, Inflation of Tubes (Rubens) 10, Insertion of Pessary 1, Myomectomy 1, Ovariotomy 21, Posterior Colpotomy 2, Salpingectomy 10, Vaginal Hysterectomy 11, Ventrosuspension 2. Total 611.

Operations on the Breast :-

Abscess 18, Excision 2. Total 20.

Operations on Bones and Joints :-

Excision of Exostosis 1, Excision of Knee Cartilage 5, For Hallux Valgus 4, Hammer Toe 1, Osteomyelitis 4, Plating of Fracture 1, Reduction of Dislocation 2, Manipulation of Fracture 11, Sequestrectomy 4, Septic Arthritis 1, Suture of Patella 2. Total 36.

Operations on Eye, Ear, Nose, Throat and Chest :-

For Cleft Palate 1, Excision of Lachrymal Sac 1, For Empyema 36, Bronchoscopy 2, Mastoid Antrotomy 11, Mastoidectomy 3, Nasal Polypus 5, Œsophagoscopy 4, Phrenic Avulsion 2, Removal of Tonsils and Adenoids 486, Submucous Resection 1, Thoracoplasty 6. Total 558.

### Excision of Various Tumours :-

Excision of Bursæ 9, Excision of Glands 1, Excision of Lipoma 2, Excision of Fibroma 1, Excision of Mole 1, Excision of Sebaceous Cyst 1, Excision of Teratoma 3, Excision of Thyroglossal Cyst 1, Excision of Wound 4, Thyroideetomy 3. Total 26.

Operations on Rectum, Anal Canal, Etc. :-

Fissure in Ano 4, Fistula in Ano 13, Hæmorrhoids 52, Ischio-Rectal Abscess 21, Sigmoidoscopy 1. Total 91.

#### Miscellaneous :-

Application of Radium 50, Alveolar Abscess 2, Avulsion of Nail 4, Cellulitis, Abscess etc. 83, Cerebral Abscess 1, Cerebral Decompression 2, Dupuytren's Contracture 1, Diathermy of Cancer 9, Examination under Anæsthetic 9, Extraction of Foreign Body 4, Extraction of Teeth 9, Ligation of Vessel 1, Repair of Wound 1, Skin Graft 1, Ventriculography 1. Total 178.

### Operations Performed in the Casualty Department :-

Amputations 7, Avulsion of Nail 14, Circumcision 180, Excision of Cyst 11, Excision of Corns, Warts etc. 10, Excision of Exostosis 2, Excision of Lipoma 2, Excision of Wound 2, Excision of Ganglion 6, Extraction of Teeth 53, Hæmorrhoids 1, Hallux Valgus 1, Fistula in Ano 1, Manipulation of Fracture 70, Manipulation of Joint 1, Opening of Abscesses, etc. 57, Reduction of Dislocation 10, Removal of Foreign Body 4, Repair of Wound 3, Tendon Suture 1. Total 436.

GRAND TOTAL 2,659.

### CHILDREN'S WARDS.

The total number of children treated during the year was 3,001, an increase of 373 from the previous year. Of this number 74 was represented by the increased number of children born.

Again there was no serious epidemic during the year, so far as this hospital was concerned, but most of the common infectious diseases were treated. There were 12 cases of Measles with Broncho-pneumonia, and 2 cases of Whooping Cough with Broncho-pneumonia.

An unusual feature this year was the admission of 24 cases of Sonné Dysentery, a disease which we have never had to treat in the hospital during the last 25 years.

The main cause of the great increase in the number of children treated was the very large number of cases of Pneumonia we have had in the hospital during the whole year and also the marked increase in the number of serious accidents amongst children who required to be admitted from the Casualty Department.

We have always had a shortage of isolation accommodation in our Children's Hospital, but this shortage will be remedied when the new Isolation Block, at present being constructed, is completed. For the first time I have to report that the accommodation for children has been inadequate. The wards have been overcrowded practically the whole year.

The other cases required no special comment, and are classified in Table XXXIX.

MATERNITY DEPARTMENT.

Appended is a report by Dr. Clancy, Obstetric Officer.

REPORT BY DR. W. J. CLANCY.

1,276 women were confined in the hospital in 1937, an increase of 90 from the previous year. Of these 1,065 were booked cases and had attended the Ante-Natal Clinic at least once, and 211 were emergency cases. Of the total confinements 660 were primiparæ and 616 multiparæ. Of the 1,304 children born 1,222 were legitimate and 82 illegitimate.

Presentations :--

Vertex Presentations—L.O.A. 707, R.O.A. 341, R.O.P. 14, L.O.P. 10. Total 1,072. Breech Presentations—L.S.A. 43, R.S.A. 16, R.S.P. 1, L.S.P. 2. Total 62.

In 21 cases there was extension of limbs.

Face and Brow Presentations—L.M.A. 6, R.M.A. 1. Total 7.

Transverse Presentations—2.

In 61 cases the presentation was not made out as the child was either born before admission in the ambulance or at home, or was spontaneously expelled without mechanism.

Multiple Pregnancies—Twins 26, Triplets 1.

The placenta was removed manually in 5 cases.

Version was performed 11 times.

Forceps were necessary in 55 cases.

Cæsarean Section was performed on 39 patients, and in 10 of these cases Salpingectomy was also performed.

All these operations were performed for various types of pelvic deformity.

In the cases where Salpingectomy was performed there had been previous Cæsarean Sections.

Craniotomy was necessary in 6 cases where the child was dead.

Labour was induced in 98 cases. Medical induction was successful in 63 cases, and Surgical induction was necessary in 35 cases.

# Hæmorrhages:—

Post-partum Hæmorrhage	 	 46
Accidental Hæmorrhage	 	 39
Placenta Prævia	 	 20

Of the labours 163 were premature, an increase of 8 from last year.

There were 291 women with Toxemia of Pregnancy, and of these 7 developed Eclampsia.

Hydramnios was present in 8 cases.

In 164 patients there was injury of the Perineum requiring repair, and Episiotomy was performed on 30 patients.

During pregnancy 47 women suffered from Bacillus Coli Pyelitis, and required antenatal treatment.

There were 59 cases of Puerperal Pyrexia notified during the year.

Other diseases associated with Pregnancy were:—Mitral Stenosis 46, Mitral Regurgitation 2, Mitral Endocarditis 2, Syphilis 7.

During the year 6 women died who were treated in the Maternity Unit, of whom 3 were booked cases and 3 emergency cases.

# BOOKED CASES :-

- (1) Patient, aged 34, (Primipara), was first seen at the Ante-Natal Clinic when 23-24 weeks pregnant. The uterus was the size of 27 weeks and evidently some degree of hydramnios was present. There was a well-marked uterine tumour on the left side which was diagnosed as a fibroid. She had abdominal pain at night with hypertension, and was admitted. 7 weeks after admission she began to vomit. The tumour was now much greater. Hysterotomy was decided upon as she was getting rather worn. 6.4.37 Classical Cæsarean Section. The abdomen contained much free fluid and there were everywhere masses of New Growth and what was evidently an Ovarian Cancer. When the uterus closed down the tumour tore away from the post abdominal wall and there was severe bleeding from the torn vessels. A blood transfusion was given that evening and her condition was fair. The next day she was clearly dying and died on 7.4.37. The baby lived five and a half hours and weighed 3 lbs. 7 ozs. A portion of the growth was removed for section. Report on section of growth:—Extremely necrotic carcinoma, probably secondary.
- (2) Patient, aged 26, (Primipara), was first seen when 21 weeks pregnant, and seemed in good health. When 38-39 weeks the head was still free and in the 3rd vertex position. On 12.4.37 labour was induced and on 13.4.37 definite labour pains and contractions commenced. During labour three attempts were made to pass a catheter and only half an ounce of blood stained urine was obtained. On 14.4.37 she was delivered with A.T. forceps. The placenta was delivered without incident. Two hours later she showed signs of obstetric shock. She was given intravenous Glucose and her condition was satisfactory. Late that night her condition again gave rise to anxiety and she was again given Glucose. The next day she was satisfactory, but passed no urine. This was attributed to the shock. For the next few days she was quite well apart from the fact that she was passing very little urine. On 19.4.37 her mouth and tongue were sore and she seemed to be drowsy and gave rise to anxiety. She was passing no urine in spite of the fact that she was periodically given intravenous Glucose and it was clear that her kidneys had ceased to function. She died on the 7th day of the puerperium from Acute Nephritis, causing Anuria and Uræmia.
- (3) Patient, aged 41, (Gravida 2), presented herself at the Ante-Natal Clinic and demanded to be admitted because she was single, destitute and lived alone. She was 36-40 weeks pregnant, and was admitted owing to her destitute and debilitated condition. 21 days later she suddenly went into labour and was delivered without incident. One hour later she had a sudden rigor and rise of temperature, and for the first two days of the puerperium was febrile. After this her temperature subsided and she gave rise to no further anxiety. On the 9th day of the puerperium she died suddenly and a post-mortem examination revealed that she had died from a Pulmonary Embolism and that there was no pelvic sepsis visible to the naked eye.

EMERGENCY CASES:-

- (4) Patient, aged 21, (Primipara), admitted to hospital on 5.6.37. At 3 p.m. that day she had been delivered by forceps at home. The placenta was retained and therefore she was sent to hospital. She was pale and shocked on admission; her blood pressure was 104/60; there was a tear of the perineum which had not been repaired. After efforts to express the placenta had failed, it was removed manually with a general anæsthetic. The uterus contracted satisfactorily, the perineal tear was repaired and one pint of Gum Saline was given intravenously. Her condition was satisfactory. During the next two days she passed only 5 and 8 ounces of urine respectively, and she continued to pass only small amounts. She was fairly well until the 12th day when she became drowsy. Her blood N.P.N. rose to 240 mgs.% and she died with all the typical signs of Uræmia.
- (5) Patient, aged 41, (Gravida 8), was admitted to Hospital when 26 weeks pregnant. She had acute Rheumatic Fever in 1922 and was in bed 9 weeks. Examination revealed that she had Mitral Stenosis with general Anasarca and well-marked congestion of the lungs due to her failing heart. She had a severe cough with a muco-purulent sputum. Her blood pressure was always below 100. She was treated by every known means but nothing would reduce the ædema or improve in any way her failing heart. On 1.12.37 when 30 weeks pregnant she suddenly commenced in premature labour and was delivered without incident of a premature feeble baby, weight 2 lbs. 10 ozs. She was extremely distressed during labour and died about midnight on 1.12.37, 12 hours after delivery.
- (6) Patient, aged 21, (Primipara), had been attending another Hospital Ante-Natal Clinic since July and had been on a Carbohydrate diet. She was admitted to this hospital at 1.10 p.m. on 27.11.37 in a fit. She had had 6 fits previously that morning. From 1.10 p.m. until 6.35 p.m. she had 10 fits in spite of continued and varied treatment. On examination she was found to be 30 weeks pregnant. The head was small and at the brim. The membranes were ruptured and the liquor drained off. At 6.57 a.m. on 28.11.37 she was delivered of a still-born child, weight 2 lbs. 13 ozs. She gradually weakened and died at 9.45 a.m. on 28.11.37.

There were 88 children stillborn, an increase of 14 from last year. The causes of the stillbirths were as follows:—

Intra-uterine fœtal death 13, Toxemia of Mother 1, Anencephaly 3, Placenta Prævia 3, Hydrocephaly 1, Uterine inertia 3, Prematurity 8, Ante-partum Hæmorrhage 13. Breech presentation 6, Craniotomy 6, Prolapse of Cord 8, Complex presentation 3, Pre-eclampsia 1, Eclampsia 3, No cause 2, Excessive moulding of head 1, Hydramnios 1, Forceps delivery 5, Placental insufficiency 2, Retro-placental bleeding 1, Epilepsy 1, Pyelitis 2, Prolonged labour 1.

There were no cases of Pemphigus this year.

There were 2 cases of Ophthalmia Neonatorum, both of which recovered.

During the year 55 newborn children died in the Maternity Wards, a decrease of 3 from last year. The causes of death were :—

Intracranial injury 3, Cerebral injury 1, Asphyxia 5, Prematurity 40, Feebleness of child 1, Icterus neonatorum 1, Hydrocephaly and Spina bifida 1, Œsophageal stricture 1, Atelectasis 1, Pneumonia 1.

During the year 52 children required to be artificially fed and in addition 60 babies had the breast milk supplemented.

There was an increase in the work of the Ante-Natal Department necessitated by the increase in the number of women delivered. The number of patients attending was 1,111, an increase of 63 from last year. The total number of attendances was 9,915, an increase of 77 from last year. The number of emergencies was 211, an increase of 59 from last year. There were a few who simply had neglected to make arrangements for their confinement, but the great majority were true emergencies. A very large number of women had to have in-patient ante-natal treatment for toxemia, pyelitis, special examinations and debility.

The attendances at the Post-Natal Clinic still leave much to be desired. Altogether 861 women attended, in all 932 times. Every effort is made to induce patients to return for examination after discharge, but in spite of this over 400 women failed to report at the Post-Natal Clinic. The proportion attending was a little better than last year.

#### GYNÆCOLOGY.

As in previous years a great deal of the surgery amongst women comes under this heading, and details are given in the appropriate sections of Tables XXXIX. and XLIII.

I am glad to report a decrease in the number of cases of abortion, from 461 in 1936 to 403 during 1937, a decrease of 58 on the year.

There was the usual large number of infected cases, and this year 10 patients died, a mortality rate of  $2\cdot 4\%$ .

Surgical interference was necessary in 286 cases.

#### VENEREAL WORK.

Very few true venereal cases were admitted again this year, and no comment is necessary. There were 6 cases of Gonorrhea and 41 cases of Syphilis, 7 of whom were in the Maternity Department. The majority of cases of Syphilis were late cases. During the year 1,401 Wassermann Tests and 164 Kahn Tests were carried out, and 404 injections of Salvarsan substitutes were given.

# MASSAGE AND ELECTRICAL DEPARTMENT.

The amount of X-ray work during the year again shows an increase, the number of patients examined showing an increase of 383 from 1936. The number of patients receiving therapeutic doses of X-rays showed a decrease of 10.

		1934.	1935.	1936.	1937.
Skiagrams	 	1,966	2,707	3.050	3,433
Treatments	 	496	309	408	398

There was a decrease in the number of patients treated by Massage, and also in the number of patients treated by Ultra-Violet Radiation.

~			
Massage	 	No. of patients	 79
		Treatments	 1,436
Ultra-Violet Radiation	 	No. of patients	 15
		Treatments	 291
Medical Diathermy	 	No. of patients	 15
		Treatments	 191

# PATHOLOGICAL WORK.

The pathological work in the hospital still continues to increase. The employment of a full-time technician has enabled Dr. Jenkinson to carry out a great deal more work than she was able to do formerly when she had only the services of a porter, part-time. The number of investigations during 1937 showed an increase of 2,095.

The following is a record of the work done in our own laboratory, but does not take into account the large amount of bacteriological and pathological work done at the University for this hospital.

DI LOUG							0.40

The amount of bacteriological and pathological work sent to the University has also materially increased, and the Department of Bacteriology at the University especially is becoming overwhelmed. The contract for the new laboratory has now been let and we hope that work will soon begin on this much needed addition to the hospital equipment.

# CASUALTY DEPARTMENT.

During the year 1937 there has been a slow but steady growth in the work of this department, and 4.562 patients were treated, against 3,443 in 1936, an increase of 1,119.

The total attendances in the Out-Patient Department were 21,702. This figure included attendances both at the Medical Out-Patient and Fracture Clinics.

The number of operations under anæsthesia in the Casualty Department during 1937 was 436.

#### NURSING STAFF.

I regret that I am unable to report any increase in the number of nursing staff during 1937, the number being practically stationary. I suppose at a time when all hospitals have difficulty in obtaining nurses we ought to be thankful that we have been able to keep up our numbers.

At the end of the year the total staff, exclusive of administration officers, was 207, a decrease of 3 from 1936.

The results of the examinations both of the General Nursing Council and of the Central Midwives Board have been satisfactory, and during the year 34 candidates passed the examination and were placed on the register of the Nursing Council, and 31 nurses passed the examination of the Central Midwives Board.

# HOSPITAL LIBRARY SERVICE.

This service has been continued as formerly, and gives the greatest satisfaction to the patients.

The librarians maintain their interest in the patients and in their special tastes in literature. Often at great inconvenience to themselves they bring books from other libraries when suitable volumes are not to be found in the hospital.

I wish to express again my appreciation of the services rendered to the hospital by the visiting librarians.

# Almoner's Department. (Report by Miss C. L. Glenn, D.P.A.).

# Patients' Payments.

The work of interviewing and assessment is steadily increasing with the increasing number of admissions. Throughout the year more patients have been admitted in accordance with the agreement between the Corporation and the Sheffield Hospitals' Council. Two reasons may be given to explain this increase. Firstly, the gradual development of treatment given to emergency and acute cases in the City General Hospital and a corresponding decrease in the number of patients receiving treatment for chronic diseases. Secondly, the return to comparative industrial prosperity means that more people are in employment and are eligible to receive a grant from the contributory scheme. The increased demand for beds for urgent cases at the City General Hospital has led to an increase in the work in connection with the infirm wards at the Nether Edge Hospital.

#### After-Care Work.

This may be summarised in the following manner:-

Trop on H.	CI							NUI	MBER OF PATIENTS
TYPE OF HE	ELP GIV	ZEN.							ASSISTED.

Total Number	or Pat	ients I	Keceivi	ng Assi	istance				601

In many of these cases the co-operation of outside agencies was enlisted. 129 patients were referred to other agencies. On analysis this showed the sources of help to be as follows:—

Number of Patients referred.

Statutory Agencies.			01 1
Central Government	 	 	18
Local Government	 <i>:</i> .	 	26
Voluntary Agencies	 	 	85
	Total	 	129

Numerous immediate telephone inquiries were made and received. 237 written reports were sent and 79 were received from the various agencies. When no help is available from any other source assistance is given from the Almoner's After-Care Fund.

### OUT-PATIENTS.

Problems concerning domestic arrangements are constantly arising in connection with the ante-natal patients. All unmarried mothers are interviewed and helped in every possible way. Particular care is taken to ensure that no girl with her baby is friendless when she is discharged from the hospital.

Patients attending the Casualty Department have received assistance to obtain medical and surgical appliances when required.

Work in connection with the medical and surgical out-patient clinics continues to merease. The social implications of the medical recommendations are carefully considered and this is found to be of real assistance to the patient and the medical officer. After discussing the patient's individual problem, it is invariably found that he is willing to make some adjustment to enable him to carry out the medical officer's recommendation to obtain the maximum amount of benefit from the hospital treatment.

# NETHER EDGE HOSPITAL.

Medical and Nursing Staff :-

Senior Assistant Medical Officer ... L. P. DE ABREW, M.R.C.S., L.R.C.P.

Assistant Medical Officer (Maternity) ANN KIRK BLACK, M.B., Ch.B.

Resident Assistant Medical Officer ... HARRIETT G. MILLER, M.B., Ch.B., D.C.O.G.

Resident Assistant Medical Officer ... ETHEL D. M. BROOK,

M.B., B.S., L.R.C.P., M.R.C.S.

Resident Assistant Medical Officer ... Margaret M. O'Connor, M.R.C.S., L.R.C.P.
Resident Assistant Medical Officer ... Margaret Venters M.B., Ch.B., M.C.O.G.

Matron, Assistant Matron, Home Sister, Night Sister, 14 Ward Sisters, and 115 other Nursing Staff.

The hospital is divided into three sections. The Tuberculosis Section is under the eare of Dr. H. Midgley Turner and his staff, and details of the work appear in his report. The details of the work of the Maternity Section, including Shirle Hill Annexe, are given in the report of the Maternity and Child Welfare Department. The General Medical Section is used almost exclusively for the treatment of chronic and incurable eases of both sexes, and consequently the patients remain in hospital for long periods and the turnover is small in comparison to the number of beds occupied.

As years go on the turnover gets smaller as more and more permanent eases are filling up the beds. Last year, only 161 patients were admitted to this section against 225 the year before. This is one of the reasons for the chronic congestion at the City General Hospital, where many acute beds are occupied permanently by chronic cases. Had it been possible to transfer even the extra 64 patients as in 1936, probably at least 500 more cases could have been admitted to the City General Hospital.

There is still one floor in the Muxlow Block unoecupied, as it has been quite impossible to get sufficient nurses to staff these 28 beds.

The number of patients treated in the hospital during the year 1937 was 3,098.

The admissions are generated	rally	classified as	follows :-			
Tuberculosis Patients			Men			197
			Women			156
			Children			412
						<del></del> 765
Maternity Patients	• •		Women			896
			Children	born		771

# MATERNITY AND CHILD WELFARE.

During the year, Dr. Ann Kirk Black, M.B., Ch.B., occupied the position of Assistant Medical Officer (Maternity), acting at the Maternity and Child Welfare Centre and the Nether Edge Maternity Hospital.

At the end of the year there were five Medical Officers from Nether Edge Hospital attending Maternity Clinics and three part-time Medical Officers working on a sessional basis at the Infant Welfare Clinics.

Professor John Chisholm, M.B., Ch.B., F.R.C.S., is Consulting Obstetrician to the Ante-Natal Clinics.

At the Ante-Natal Clinic at the City General Hospital, which is co-ordinated with the Central Clinic, supervision continued of the large number of abnormal cases which were booked for confinement in the hospital. During the year 4,460 new cases of expectant mothers attended at the Central Maternity Clinic, an increase of 960 from the previous year. 1,198 new cases also attended the ante-natal clinic at the Jessop Hospital for Women during the year.

The whole of the Health Committee's ante-natal work is now being carried on by Medical Officers who are also engaged in active midwifery practice in the Municipal Hospitals.

The total number of lying-in beds available in the City at the end of the year inclusive of ante-natal beds was 173, comprised as follows:—City General Hospital 70 beds, Nether Edge Hospital 32 beds, Shirle Hill Annexe 20 beds, Jessop Hospital (Voluntary) 51 beds, (approximately 44% of the patients admitted to the Jessop Hospital are from outside the City). Work is also nearing completion upon an extension which will provide 32 additional lying-in beds at the City General Hospital.

Within this section of the Report will be found detailed information regarding the Domiciliary Midwifery and Maternity Nursing Service which was set up on 30th July, 1937, as required by the Midwives Act 1936. In the first five months of working the midwives directly employed by the City Council attended a total of 810 confinements as Midwives and 258 as Maternity Nurses. In addition three midwives of the Jessop Hospital for Women, under arrangements between the Hospital and the Council, attended a total of 134 confinements as Midwives.

A total of 10,791 children under 5 years of age attended at the various Infant Welfare Clinics during the year, the figure for the year 1936 being 9,842. The aggregate number of attendances by such children was 101,689 as against 98,331 in the year 1936.

The Child Welfare Services in Sheffield are supplemented by the provision of Clinics, and of hospital treatment where necessary for Rickets and other Orthopædic conditions. Results have been most satisfactory and the Ultra Violet Ray Clinic which has been established has proved a very useful adjunct to this branch of the service.

A new Maternity and Child Welfarc Centre was opened at Firth Park in June, 1938, and schemes for two further Centres are in course of development. When these new Clinics are all completed the Maternity and Child Welfare services in general will become considerably augmented.

# NOTIFICATION OF BIRTHS.

Compulsory notification of births, hitherto imposed by the Notification of Births Act 1907, is now a requirement under the Public Health Act 1936.

In the year 1937, 8,260 live births and 379 still births, making a total of 8,639 births, were notified. These births were attended as follows:—

At Home—				
By private Medical Practitioners			2,207	
By Midwives			2,910	
				5,117
In Nursing Homes				357
In Municipal Hospitals—				
City General Maternity Hospital			1,294	
Nether Edge Maternity Hospital			797	
				2,091
In Voluntary Hospitals—				
Jessop Hospital for Women \				1,074
Firth Auxiliary Hospital	• •	• •		1,011
	Total			8,639

It should be explained that the obligation to notify applies to all births occurring in the City, whether amongst Sheffield residents or otherwise, and that the foregoing figures therefore contain a certain proportion which relates to non-residents.

# HEALTH VISITORS' WORK.

TABLE XLIV—Summary of the Work of the Health Visitors during the year 1937.

Visits to houses let-in-lodgings						<b>6</b> 8

### MIDWIVES ACTS, 1902 to 1936.

At the end of the year 1937, there were 65 midwives, inclusive of Municipal Midwives, who were in practice in domiciliary midwifery in the City.

There were 226 visits of inspection paid to midwives at their homes during the year, and 850 interviews of midwives for various reasons connected with their work at the office of the Assistant Medical Officer for Maternity and the Chief Inspector of Midwives.

There were 39 notifications of still births received from midwives, 21 having reference to full time births, and 18 to premature births.

In 20 cases the midwife sent in a notification that the mother intended to substitute artificial feeding for breast feeding.

There were 670 notifications received stating that the midwife had sent for medical help. The reasons for sending for medical help were as follows:—

1. Conditions affecting the mother ante-natally.

Albuminuria 8; Ante-partum hamorrhage 29; Pneumonia 1; Hæmaturia 1; Mitral Stenosis 1; Influenza 2; Vomiting of pregnancy 1; Threatened miscarriage 3; Hæmorrhoids 1; Otitis media 1; Cessation of gestation 1; Boils on head 1; Post-maturity 1. Total 51.

- 2. Conditions affecting the mother in labour.
  - (a) Uterine inertia 27; Prolonged labour 51; Obstructed labour (brow and disproportion) 3; Prolapsed cord 3; Adherent placenta 17; Post-partum hæmorrhage 34; Post-partum shock 7; Retained membranes 1; Impacted shoulders 1; Precipitate labour 1; Rupture of membranes (no contractions) 7; Misearriage 2; Incomplete tear of perineum 220. Total 374.
  - (b) Abnormal presentations.

Persistent occipito posterior 9; Breech 8; Footling 1; Transverse (arm) 2; Twins 7. Total 27.

3. Conditions affecting the mother during puerperium.

Pyrexia 28; Acute mastitis 9; Retention of urine 1; Pain in chest 6; Thrombo-phlebitis 6; Dermatitis 3; Vomiting 1; Absects of face 1; Septic finger 1; Bronchitis 4; Cold and Cough 3; Cracked nipples 1; Subinvolution 1. Total 65.

4. Conditions affecting the child.

Ophthalmia neonatorum (all recovered completely without injury to eyes—10 were notified) 45; Jaundice 5; Fætal deformity (spina bifida, talipes, etc.) 6; Prematurity 33; Hæmorrhagica neonatorum 1; Vomiting 2; Cephalhæmatoma 1; Convulsions 5; Stillborn 2; Inanition 14; Asphyxia livida 13; Congenital heart disease 1; Nævus (hand) 1; Umbilieal hernia 1; Dermatitis 5; Pemphigus 1; Ateleetasis 1; Congenital malformation of heart 1; Cough 1; Pneumonia 1; Bronchitis 4; Malformation of anus 1; Imperforate urethra 1; Otitis media 1; Gangrene of finger 1; Hæmorrhage after eircumcision 1; Snuffles 1; Thrush 1; Septie spots on body 2. Total 153.

# PUERPERAL PYREXIA.

The statement which follows indicates where the confinements occurred which resulted in the 226 cases of Puerperal Pyrexia which were notified in 1937. It also gives similar particulars of the total of 13 deaths from Puerperal Sepsis and Post-abortive Sepsis which occurred during the year.

	Discussion Confinement	Pue	Number of cases of Puerperal Pyrexia Number of lassociated with from			$\begin{array}{c} \text{Number of Deaths} \\ \text{from} \end{array}$

# OPHTHALMIA NEONATORUM.

There were 32 notifications of Ophthalmia Neonatorum during the year 1937 and one case which was notified in a previous year was still under treatment in 1937. The confinements in association with which the disease was contracted occurred as follows:—

	At Home—						
	By private Medical Practitioners					8	
	By private Medical Practitioners a	and Midwiv	es			3	
	By Midwives					16	
	In Municipal Hospitals—

# DIPHTHERIA IMMUNISATION AND SCHICK TEST CLINIC.

20 new patients attended, making 40 attendances.

15 patients were immunised against Diphtheria and 2 children and 2 adults had Schick test done.

# REPORT ON ORTHOPÆDIC DISEASES (Non-Tuberculous)

BY C. LEE PATTISON, M.B., B.S.(Lond.), M.R.C.S., L.R.C.P.,

Medical Superintendent King Edward VII Hospital and Medical Officer in Charge of the Orthopædic Clinic.

KING EDWARD VII HOSPITAL, RIVELIN.

During 1937 the following non-tuberculous orthopædic patients completed treatment in this Hospital.

Rickets		 	 . 14
Anterior Poliomyelitis .		 	. 6
Cerebral Spastic Paralysis .		 	 . 6
Congenital Talipes, Equino-van	rus etc	 	 . 6
Marasmus			 . 4
Multiple Congenital Deformit	ies	 	 . 1
Pyogenic Infection of Bone a			 . 3
Carlingia			. 3
Syphilitic Bone and Joint .			 . 3
TT			 . 1
			47

After discharge from Hospital these patients were kept under supervision and given treatment at the orthopædic treatment clinic in the Child Welfare Centre.

# RICKETS AND ORTHOPÆDIC CONSULTATION CLINICS.

These clinics are held at the Maternity and Child Welfare Centre on Tuesday afternoons and Thursday mornings.

During 1937 there was a total attendance of 6,495 compared with 6,169 in 1936. There were 687 new cases seen and these were classified as follows:—

Rickets			 . 488
Anterior Poliomyelitis			 . 6
Post-diphtheritis Paralysis			 . 6
Tuberculosis of Bones and Jo	oints		 . 10
Non-tuberculous disease of Box	nes		 . 2
Enlarged cervical Glands			 . 29
Tuberculosis of the Peritoneur	n		 . 3
Malnutrition			 . 15
Pink Disease			 . 2
Cerebral Spastic Paralysis			 . 12
Muscular Dystrophy			 . 2
Fractures			. 4
Postural Defects			 . 34
Birth Paralysis			 . 5
Congenital Talipes .		 	. 12
Sternomastoid Tumour and To	orticollis		. 18
Other Congenital Deformities	•		 . 17
Unclassified			. 22

687

RICKETS.—The number of patients with this disease has diminished since last year but of the 488 new cases there were nevertheless 137 children who had the disease in a severe degree.

# ULTRA-VIOLET RAY CLINICS.

These are held on four mornings a week. 9,890 treatments were given during the year, and there was an average weekly attendance of 194 patients.

There were 364 new cases treated at these clinics.

### ORTHOPÆDIC TREATMENT CLINIC.

This clinic is held at the Maternity and Child Welfare Centre on five afternoons and three mornings a week under the direction of the Medical Superintendent of the King Edward VII Hospital.

The work is carried out by a Sister experienced in Orthopædic treatment, and having the diplomas of C.S.M.M.G., M.E., L.E.T. Two fully qualified masseuses are also in attendance.

It is usually essential for each child to attend two or three times a week, and each session occupies a considerable time as frequently several forms of treatment are needed for one child.

The total attendances during the year were 4,732. 237 patients were treated and 132 of these were new patients. These patients were classified as follows:—

Disease.			Total Cases	New Cases.
Postural defects			 90	<b>4</b> 9
Rachitic Deformity			 12	7
Fractures and Dislocations			 4	4
Post-diphtheritic Paralysis			 4	4
Tuberculosis of Joints			 5	2
Anterior Poliomyelitis			 21	4
Muscular Dystrophies			 2	1
Cerebral Spastic and Birth	Palsies		 30	17
Congenital Talipes			 25	11
Sternomastoid Hæmatoma	(Tortico	llis)	 19	17
Other Congenital Deformiti	es		 18	10
Unclassified			 7	6
				100
			237	132
			231	104

All the patients were kept under observation in their homes by the Health Visitors and were seen periodically by the Medical Officer in charge of the treatment.

Considerable attention is paid to postural defects. It is difficult but very important to correct poor posture in young children and much time and ingenuity are needed to get the little ones to develop habits of standing, sitting and walking correctly, but the efforts are well worth while and should have a marked effect on the future health of the patients.

# CENTRAL MATERNITY CLINIC.

REPORT BY ANN KIRK BLACK, M.B., Ch.B., Assistant Medical Officer for Maternity.

In reviewing the work of the year, we find that there has been a further large increase in the number of expectant mothers at the Clinics. It is estimated that approximately 50% of the expectant mothers of the City were seen at the Central Clinic.

The majority of the mothers attended the Clinic early in the pregnancy and usually made arrangements for the confinement on the first visit. The maternity beds at the Nether Edge and City General Hospitals were well booked up throughout the year.

The Domiciliary Midwifery Scheme was continued until the new service under the Midwives Act 1936 came into force in July, 1937. Both schemes have worked satisfactorily and the patients have appreciated the services.

The Post-Natal Clinic continued to work very successfully and the patients appreciated this service.

The Birth Control Clinic was conducted on the same lines as last year, and in accordance with the regulations of the Ministry of Health.

ANTE-NATAL CLASSIFICATION OF CASES.

Normal cases—Total 3,038.

#### Toxamia of Pregnancy-

Hyperemesis Gravidarum 5, Albuminuria 98, High Blood Pressure 81, Eclampsia 4. Total 188.

4,460

#### Hæmorrhages—

Threatened Miscarriage 1, Miscarriage 80, Ante-partum Hæmorrhage 5, Inevitable Miscarriage 1. Total 87.

# General Condition of the Mother.

Malnutrition 15, Anæmia 88. Total 103.

# Diseases associated with Pregnancy—

Pyelitis 65, Mitral Stenosis 36, Syphilis 10, Gonorrhœa 1, Bronchiectasis 2, Mitral Regurgitation 1, Tuberculosis 3, Epilepsy 2, Exophthalmic Goitre 1, Thrombo-phlebitis 4, Bronchitis 1, Chronic Bronchitis 3, Pleurisy 1, Varicositis 1, Renal Calculi 1, Diabetes 3, Peripheral Neuritis 1, Chorea Gravidarum 4, Hæmaturia 1, Pneumonia 1, Broncho-pneumonia 2, Encephalitis Lethargica 1, Glycosuria 2, Intestinal obstruction, due to volvulus, 1, Asthma 1. Total 149.

# Tumours complicating Pregnancy—

Ovarian Cyst 2, Fibroids of Uterus 1, Cancer of Ovary 1, Cervical fibroids 1. Total 5.

#### Conditions associated with the Fætus-

Missed Abortion 7, Hydramnios 10, Cessation of Gestation 14, Hydatidiform Mole 1. Total 32.

### Malpresentation-

Transverse 17 (rectification performed in 16 cases), Breech 242 (195 of the breech eases had external version performed). Total 259.

#### RESULTS OF CONFINEMENTS 1937.

The following summary of ante-natal cases dealt with during 1937 shows 4,067 charts completed:—

Cases brought forward	from 1936	 	 	1,083
New eases 1937		 	 	4,460
Cases carried forward	to 1938	 	 	5,543 1,476
				4,067

# The 4,067 charts show the following results:—

Normal deliveries 3,594, Instrumental deliveries 128, Cæsarean Section 35, Hysterotomy 2, Craniotomy 7, Misearriage 84, Evacuation of Uterus 7, Undelivered 1, Not pregnant 166, Left the City 42, Cases which could not be traced 1.

# The indications for Cæsarean Section were :-

Disproportion 20, Repeat Cæsarean Section for Disproportion 12, Atresia of Cervix 1, Ovarian Cyst obstructing Pelvis 1, Dermoid of ovary obstructing pelvis 1. Total 35.

Labour was induced in 127 cases, medical induction was successful in 72 of the cases but 55 required surgical induction.

Of the cases who attended the Clinic, 1 was notified as puerperal fever and 47 as pueperal pyrexia.

There were 49 sets of twins and 1 set of triplets.

Live and Still-born Babies.

3,672 babies were live-born—of these 166 were premature.

144 babies were still-born and the causes	s of st	ill birth	were as t	follows :-	
Prematurity					11
Fetal deformity (anencephaly)					6
Fætal deformity (hydrocephalus)					5
Prolapsed cord					11

# DOMICILIARY MIDWIFERY.

The Domiciliary Midwifery Scrvice, as inaugurated in 1932, was carried on until the commencement of the new scheme under the Midwives Act 1936, which came into force on the 30th July, 1937.

Under the earlier scheme, midwives in private practice in the City were engaged to attend cases at a fixed fee per case. Particulars of cases attended under this scheme during the year are as follows:—

	Midwife attending in the capacity of					
	Midwife	Maternity Nurse	Total			
Cases delivered and nursed at home Cases delivered at home and transferred	677	8	685			
to hospital	10		10			
Total cases delivered at home	687	8	695			
Cases where a midwife was in attendance but the patient was transferred to						
hospital before delivery	41		41			

Midwives Act 1936.—The Domiciliary Midwifery Service under the Midwives Act 1936 commenced on the 30th July, 1937, and at the end of the year there were 36 Municipal midwives in residence in various parts of the City. From the commencement of this service until the end of December 1937, cases attended by the 36 Municipal Midwives were as follows:—

	Municipal Midwife attending in the capacity of					
	Midwife	Maternity Nurse	Total			
Cases attended and nursed at home Cases delivered at home and transferred	795	254	1,049			
to hospital	15	4	19			
Total cases delivered at home	810	258	1,068			
Cases where a midwife was in attendance but the patient was transferred to						
hospital before delivery	46	16	62			

The Municipal Midwives visit patients ante-natally and for fourteen days after delivery.

From the 30th July to the end of December 1937, the Municipal Midwives reported 3,153 ante-natal visits, 18,361 visits during the puerperium and 1,151 visits for various other reasons, giving a total of 22,665 visits.

Patients who wish to book the services of a Municipal Midwife must obtain a form of application at the Maternity and Child Welfare Centre in Orchard Place. During 1937 practically all the patients who applied for the services of a nurse to attend as midwife received ante-natal supervision at the Clinic. A number of applicants for Maternity Nurses attended the Clinic voluntarily but in many cases these patients were receiving ante-natal supervision from the private medical practitioner engaged to attend at the confinement.

The fee charged for a Municipal Midwife or Maternity Nurse is 35/- for a first confinement and 30/- for a subsequent confinement but there is a scale of charges in operation whereby persons who are unable to pay the full fee may obtain such services free of charge or at a reduced rate.

#### EXPECTANT MOTHERS—CARE OF CHILDREN.

A scheme for the care of young families during the confinement of the mother was commenced in November 1935.

Where the home circumstances for one reason or another present difficulties the scheme provides facilities whereby young children in the house are admitted to the Herries Road Children's Homes and maintained there during the period of the lying-in of the mother.

A total of 93 children from 49 families were admitted to the Homes under these arrangements during the year 1937, the corresponding figures for the year 1936 being 41 and 19 respectively.

# NETHER EDGE MATERNITY HOSPITAL.

The work at the Nether Edge Maternity Hospital has been conducted on the same lines as formerly.

The number of cases admitted to the hospital was 898. There were 786 women confined and of this number 506 were primiparæ and 280 were multiparæ.

Confinements in the hospital during each of the past five years are as follows :-

1933	 	 706
1934	 	 761
1935	 	 710
1936	 	 751
1937	 	 786

During the year 1937 there were 254 ante-natal patients admitted for treatment or investigation with the following results:—

### Toxamia of Pregnancy—

- 24 cases of Albuminuria—17 improved with treatment and had normal full time confinements; 3 had normal premature confinements; 3 cases did not show any signs of improvement and labour was induced; 1 case developed eclampsia and had surgical induction to terminate the pregnancy.
  - 4 babies were still-born.
- 21 cases of High Blood Pressure—1 improved with treatment and was discharged to the clinic, 20 remained in hospital (of these 13 had normal full time confinements, 4 had normal premature confinements, 1 had a craniotomy on account of slow dilatation of cervix and prolonged labour, 1 case showed no improvement and labour was induced surgically at the 35th week with living child, 1 patient was still having ante-natal treatment at the end of the year).
  - 5 babies were still-born.

### Diseases associated with Pregnancy-

- 28 cases of Pyelitis—16 improved with treatment and were discharged to the clinic, 12 remained in hospital (11 had normal full time confinements, and 1 had surgical induction for hydramnios).
  - 7 cases of slight vomiting of pregnancy—all improved with treatment and were discharged to the clinic.
  - 8 cases of Œdema were admitted for treatment and urinary investigation—2 improved and were discharged to the clinic, 6 remained in hospital and had normal full time confinements.
  - 4 cases were admitted with pain in the side for urinary investigation and treatment—all improved and were discharged to the clinic.
- 39 cases were admitted for investigation and treatment, if necessary (19 were found to be normal and were discharged to the clinic; it was considered advisable to keep the remaining 20 in hospital until after the confinement).
- 2 cases of Thrombo-phlebitis—1 improved and was discharged to the clinic, 1 remained in hospital and had a normal full time confinement without complications.
- 1 case of Broncho-pneumonia was admitted for treatment and had premature confinement, and died.
- 8 cases of Anæmia—5 improved with treatment and were discharged to the clinic, 3 remained and had normal full time confinements.
- 5 cases were admitted with minor ailments—3 improved with treatment and were discharged to the clinic, 2 remained and had normal full time confinements.

#### Conditions associated with the Fætus—

- 6 cases of slight Ante-Partum Hæmorrhage remained in hospital (of these 3 had normal full time confinements, 2 had normal premature confinements, 1 had a forceps delivery).
- 36 cases of Breech presentation were admitted; external version was successful in 19 cases but failed in 17 cases.
- 3 cases of acute Hydramnios.
- 2 cases of Transverse Presentation—rectification was successful.
- 60 cases were admitted for various reasons such as maturity, post-maturity, high head, breech presentation, etc., to await confinement.

#### Miscellaneous-

61 patients were admitted to hospital as they thought that labour had started, 23 remained for a few days and were then discharged to attend the clinic again; 38 remained in hospital until after the confinement.

### The confinements in hospital show the following results—

Normal deliveries		 	 	754
Forceps deliveries		 	 	30
Craniotomies	 	 	 	2

There were 54 premature babies born which is an increase of 4 on last year.

The principal obstetrical abnormalities were :-

•	1					
	Breech presentation	1			 	 28
	Sets of twins				 	 16
	Hydramnios				 	 3
	Prolapsed cord				 	 1
	Marginal placenta	prævia			 	 4
	Persistent occipito	posterior	presenta	ition	 	 <b>1</b> 0
	Face presentation				 	 1

The placenta was manually removed in 10 cases.

Labour was induced in 46 cases, medical induction was successful in 35 of the cases, but 11 required surgical induction.

There were 772 live births (including twins). There were 30 still births, which is an increase of 15 on last year; of this number 16 babies were premature.

The still births were due to the following causes :-

Version, Placenta prævia 2; Intra-cranial Hæmorrhage 3; Version transverse lie 1; Prolonged labour 3; Prolapsed cord 1; Fætal deformity—Anencephaly 3; Fætal deformity—Hydrocephaly 2; Maternal pneumonia 2; Maternal eclampsia 1; Maternal albuminuria 2; Macerated—full time 5; Macerated—premature 5.

During the year 16 new born babies died in the maternity wards. The causes of death were:—Prematurity 7; Congenital malformation of kidneys 1; Hydrocephaly with Spina Bifida 1; Atelectasis 1; Intra-cranial Hæmorrhage 2; Gastro-enteritis—prematurity 1; Asphyxia Pallida 1; Broncho-pneumonia 1; Congenital malformation of heart 1.

There were 17 cases of Puerperal Pyrexia notified from the Hospital.

There were no cases of Pemphigus Neonatorum but 1 case of Ophthalmia Neonatorum which recovered completely.

- 3 ante-natal patients were transferred to the City General Hospital for treatment and confinement. 10 mothers developed breast abscess and were sent to the City General Hospital for operation. 1 mother was sent to the observation ward at the City General Hospital.
- 5 babies were sent to the Children's Department of the City General Hospital for observation and special treatment.

758 babies were discharged from hospital and of this number 81 were artificially fed.

# MATERNITY AND NURSING HOMES.

The following are particulars with regard to the Registration of Maternity and Nursing Homes in the City during the year :—

1. Number of applications for registration:—										
	For Maternity cases					—				
	For Maternity, Medical and S	Surgical	cases			_				
	For Maternity and Medical e	ases				1				
	For Medical cases					_				
	For Medical and Surgical ca	scs				_

	Maternity and Medical				4					
						22				

#### DAY NURSERY.

The Day Nursery, Edward Street, affiliated to the Association of Day Nurseries, was formed for taking charge of young children of mothers who are obliged to work away from home, or who are temporarily laid aside by illness.

Infants between the ages of one month and five years are admitted every day (Saturdays and Sundays excepted) from 7.30 a.m. to 7 p.m., during which time they are fed and cared for by suitable nurses. A charge of 6d. per day for each child, or 2/- per week of 5 days, is made towards the cost of food; if two children are received from the same home a fee of 9d. per day is charged. Numbers have increased notwithstanding the removal to housing estates of families whose houses have been demolished under the slum clearance scheme. The distance has not been a deterrent.

In the Nursery there is accommodation for 40 children, but this accommodation was not fully used during the year, unemployment having kept many mothers at home. The staff at present consists of Matron and four nurses, who also do the housework, and a Medical Attendant who visits at least once per week.

The babies are weighed and charts are kept containing records of progress. The charts are supplied from the Maternity and Child Welfare Centre.

It is believed that by the Day Nursery organisation many children are saved from accidents. Habits of cleanliness are inculcated and a moral influence is exercised over both child and parent.

With the exception of the 6d. per day paid by the mothers and a grant out of the General Exchequer Contribution of the Ministry of Health, the Day Nursery is supported by voluntary contributions.

# Institutional Provision for Unmarried Mothers, Illegitimate Infants and Homeless Children.

The Sheffield Diocesan Home for Babies, East Bank Road, which is a Church of England organisation admits illegitimate children upon payment of a small sum weekly by the mothers, the children being admitted at birth and discharged at two years of age. There are 32 beds, and accommodation is also provided for 4 nursing mothers, the latter acting in the capacity of maids during their stay in the Home.

St. Agatha's Church of England Hostel, Burngreave Road, a Home for unmarried expectant mothers has an accommodation of 13 beds. The confinements take place at the Jessop Hospital for Women or at the City General Hospital, the mothers afterwards returning to the Home with their babies for a short period. The babies are then transferred to the Diocesan Home for babies and efforts are made to obtain employment for the mothers.

St. Veronica's, a Roman Catholic Home situated in Lydgate Lane, Crookes, normally receives only infants, but unmarried mothers and their infants are admitted in cases of emergency.

The Salvation Army Home at Kenwood Park Road admits various classes of cases including homeless children and girls who are under no control. The Sheffield Branch of Dr. Barnado's Homes also accepts homeless children.

Where it is necessary expectant unmarried mothers are admitted to Firvale House, the Council's Public Assistance Institution, and the Council admits homeless children into the Sheffield Children's Homes regarding which detailed information is given below.

### CHILDREN'S HOMES AND BOARDING OUT OF CHILDREN.

The greater part of the service relating to the maintenance of poor children apart from their parents is carried out at the Herries Road and Scattered Homes and at Fulwood Cottage Homes. Details follow of the total accommodation for 538 children at 31st December, 1937, in these Homes and the figures are inclusive of one isolation bed which is provided in each cottage or scattered home.

Herries Road Homes	(inclt	uding	Nursery	accommodati	ng 54 children	
under 3 years	of ag	ge)			Accommodation	154
Scattered Homes (14	in ni	umber)			,,	152
Fulwood Cottage Hom	es				,,	232

In addition to the children in the Homes there were 36 Sheffield children boarded out with Foster-parents in the City at the end of the year and 9 Sheffield children who were boarded out in other areas.

The following information is given upon the year's work at the Children's Homes and in connection with Boarded-out children.

Herries Road and Scattered Homes—(Extracted from a Report by the General Superintendent, Mr. W. F. Hastie).

Number of children in the Homes on 1st January, 1937	 262
Number of children in the Homes on 31st December, 1937	 <b>24</b> 8
Number of children admitted during the year	 547
Number of children discharged during the year	 561
Number of children transferred to Fulwood Cottage Homes	 31
Average daily number of children resident in the Homes	 261

CHILDREN.—546 children were admitted to the Homes during 1937 as against 427 in the previous year. Included in these figures are 93 children admitted under the Expectant Mothers-Care of Children Scheme, the admissions under this latter scheme in 1936 numbering 41. The daily average number of children resident in the Homes was 261 as against 265 in 1936.

The reports of the Medical Superintendent and the District Medical Officers upon the health of the children regularly resident in the Homes continued to be highly satisfactory.

EDUCATION.—Children from the Homes attended 28 different schools in the City during the year, mixing with the outside child population in small inconspicuous numbers. Two boys qualified for entrance to secondary schools; one girl who attended a secondary school obtained the School Certificate of the Northern Universities Board and continued her education at the Central Day Commercial College, later obtaining an appointment on the Corporation staff; one girl attending Greystones Intermediate School matriculated and is continuing her education at the Central Day Commercial College.

Sports, Entertainments, etc.—The usual sports, games and physical training continued during the year. Many swimming prizes and certificates were gained and Doris May Slater was champion swimmer of Manor Girls' School and gained a free pass to the Corporation Baths. Trophies are provided by Councillor W. S. Graham, J.P., for the best boy swimmer and girl swimmer and these were won by Thomas French and Doris May Slater respectively. Entertainments were provided in the Recreation Hall during the winter months, and on a number of occasions children were invited to attend entertainments outside the Homes.

Training.—Boys and girls who had left school were given training in the Homes in the Tailors and Shoemakers Shops and in the gardens, the stores, the sewing room and the hand laundry. Girls were also trained in the Homes in domestic science and similar subjects.

Employment was found for nine boys and seventeen girls during the year—in the Merchant service, the Navy, as Clerks and eraftsmen and in various nursing and domestic capacities.

Three Roman Catholic girls were transferred to the Knolle Park School, Liverpool, for training and one boy after a period of training at Gravesend Sea School became a Ship's Steward.

Five working boys were boarded out during the year. These boys were regularly supervised and also paid periodic visits to the Homes. One boy was allowed to take his discharge, having become entirely self supporting.

AFTER-CARE.—Nine boys and eight girls in situations attained the age of 18 years and their bank books, with credit balances amounting in the aggregate to £146 19s. 5d., were handed to them.

At the end of the year, there were twelve boys and twelve girls in situations and still under the care of the Committee. They were regularly visited and they visited the Homes frequently.

Approximately 160 former children of the Homes attended the Annual Re-Union which was held in December and the function was a thoroughly enjoyable one for all.

GENERAL.—The Annual Camp week was spent at Hornsea and the children appreciated the change of venue.

On 1st April, 1937, the accommodation in each Home was reduced from eleven beds to ten beds and the change has proved very beneficial.

Fulwood Cottage Homes—(Extracted from a Report by the Superintendent, Mr. L. Hildreth).

No. of children resident 1st January, 1937	 208
No. of children admitted during the year	 127
No. of children discharged during the year	129
No. of children resident 31st December, 1937	206
Average daily number of children resident during the year	 204

HEALTH.—The quarterly reports of the Medical Officers were satisfactory and the general health of the children was very good during the year.

EDUCATION AND TRAINING.—An excellent standard of school attendance has been maintained by the children and great progress has been made both at day school and night school.

Satisfactory work was done during the year by the girls attending the Domestic Science Centres.

One child attended a Secondary School and one girl attended the Central Commercial College where she obtained the College Certificate.

In the industrial training section of the Homes a total of 1,906 articles of clothing or other material were cut out and made up for instructional purposes and were afterwards used in the Homes.

Employment was obtained for children in 67 instances, a figure which is identical with that for the year 1936 and is the highest since 1919. One boy obtained a scholarship under the Ministry of Agriculture and entered a College of the Ministry, and another became a member of the B.B.C. Symphony Orchestra. Situations were also obtained as Joiners, Painters, Clerks, Tailors, Mechanics, Farm Workers and in various nursing and domestic capacities.

There was systematic visitation during the year of boys and girls who had been placed in situations and it was found that satisfactory progress was being made. The total of the bank balances of these children at the end of the year was £650, an increase of £245 from the year 1936.

RECREATION.—The "Maclaurin" Football Shield was won by Cottage No. 3. The "Nunn" swimming trophy, awarded each year to the girl making most progress in swimming, by Mary Gibson, and the "Deacon" swimming trophy for boys by Charles Cooper. A number of children obtained Certificates of the Royal Life Saving Society. Interest has been well maintained in both indoor and outdoor sport and a keen but friendly spirit has been shown.

The Circulating Library, kindly provided by the Public Libraries Committee, has been a great source of pleasure and interest to the children.

Numerous entertainments were enjoyed during the winter months through the kind offices of various parties.

OLD BOYS AND OLD GIRLS.—A total of 1,470 visits were made to the Homes during the year by former children of the Homes and the majority were doing well and expressed their appreciation of what had been done for them in the Homes. At the annual Re-union of the Old Boys' and Old Girls' Association, which was held in January, a party of 230 members and friends attended and had a pleasant evening.

GENERAL.—The Annual Camp week was spent at Hornsea and the holiday was thoroughly enjoyed by all.

At the end of 1936 there were five Working Boys who were boarded out and four boys and one girl were boarded out during 1937. At the end of the year 1937 there remained six working boys and one girl boarded out.

On the 1st April, 1937, the accommodation of each cottage in the Homes was reduced from 13 beds to 10 beds and the change has proved beneficial to both children and staff.

Boarding Out of Children—(Report of the Inspector, Miss H. Trickett).

At 31st December, 1937, there were 36 Sheffield children who were boarded out in the City and also nine Sheffield children boarded out in the areas of other authorities, the Sheffield Corporation refunding to these authorities the amounts of the boarding out allowances which they had made. Two children belonging to other authorities were boarded out in the City and were under the supervision of the Sheffield Inspectors, the amounts of the boarding out allowances being reclaimed from the authorities concerned.

Seven of the 36 boarded out Sheffield children—five boys and two girls—were in employment at the end of the year. Reduced boarding out allowances were made in four of these cases and three of the seven were in fact entirely self-supporting, although still under supervision. Two boys and two girls attained the age of 16 years during the year and the boarding out allowances consequently ceased.

The health of the children was very good throughout the year and the District Medical Officers attended to the few minor ailments. Dental treatment was provided at the School Clinic and the children were encouraged by the Foster Mothers in the care of their teeth. Quarterly reports were received regarding each child who attended school and these reports were in all respects satisfactory.

The houses of the foster parents were clean and well kept and the children were treated in all respects as part of the family. The clothing which was provided was satisfactory and the boarding out allowances were well spent. In the summer most of the children were taken by their foster parents for seaside holidays and some went camping.

498 visits were made by the Inspectors during the year, this figure including visits to Boarded Out Children in Sheffield and also visits to residents beyond the area in respect of applications which had been made under the following headings:—(a) applications for custody of children who were in the Homes, (b) applicants asking permission for children in the Homes to be allowed to visit them, (c) applications to be allowed to visit children in the Homes, (d) applications for the adoption of children who were in the custody of the Corporation. The object of the visits was to enquire as to the suitability of the applicant and of the home concerned.

# PREVENTION AND TREATMENT OF TUBERCULOSIS.

REPORT BY H. MIDGLEY TURNER, M.D., M.R.C.P., D.P.H., Clinical Tuberculosis Officer and Medical Superintendent of City Sanatoria.

MEDICAL STAFF:—

Clinical Tuberculosis Officer and Medical

Superintendent of the City Sanatoria. H. MIDGLEY TURNER, M.D., M.R.C.P., D.P.H.

Assistant Tuberculosis Officers ...

J. S. CRAIG, M.B., Ch.B.

H. G. GRACE, M.B., Ch.B.

W. Dornan, M.B.; Ch.B.

J. URQUHART, M.B., Ch.B., D.P.H.

D. H. ANDERSON, M.B., B.Ch.

H. D. McGorry, B.A., M.B., Ch.B., D.P.H.

The number of notifications of Tuberculosis of the Lung received during 1937 was 902 and Other Forms of Tuberculosis 207, giving an incidence rate per 1,000 of the population of 1.74 for Tuberculosis of the Lung and 0.40 for Other Forms of Tuberculosis.

The number of deaths from Tuberculosis of the Lung of Sheffield residents occurring in the City during the year was 349, which is equal to 38.69 per eent. of the notifications received. To this number must be added 6 deaths of Sheffield residents occurring outside the City.

The Death-rate for Tuberculosis of the Lung is 0.685 per 1,000 of the population and for Other Forms of Tuberculosis is 0.114 giving a total Death-rate for the City for All Forms of Tuberculosis of 0.799. This eompares with a Death-rate 0.584 for Pulmonary Tuberculosis and 0.695 for All Forms of Tuberculosis, for England and Wales.

It will be recalled that the Tuberculosis Death-Rate in 1936 showed a tremendous fall. Part of this fall was due to a survival of patients through the Autumn and Winter of 1936 into the commencement of 1937. This factor, together with an Influenza epidemic in the first Quarter of 1937 explains the marked upward fluctuation of the Death-rate for 1937. There is every reason to expect a continuation of the downward trend of the Tuberculosis Death-rate in the year 1938.

Table XLVI. shows the number of new eases notified, deaths and non-notified deaths at the various age periods.

<sup>\*</sup> Included in figures of Notifications (New Cases) above.

In 301 of the 902 cases of Tuberculosis of the Lung, tubercle bacilli were found in the sputum, that is in 33·39 per cent. Generally speaking the prognosis in non-infectious cases is much better than in infectious cases, although in recent years, with earlier diagnosis, the prognosis even for infectious cases has considerably improved. Our work is constantly directed towards establishing a diagnosis of Tuberculosis in the earliest stage of the disease. The number of new infectious cases during 1937 was 342 as compared with 336 in 1936.

The total number of notified cases on the Register on December 31st, 1937, was 6,307. Of these 1,210 (including seven children under 15 years of age) were infectious cases, i.e., cases in which tubercle bacilli have been found in the sputum at some period of the illness.

93.35 per cent. of the cases of Tuberculosis of the Lung notified during the year were examined by the Dispensary Staff. Of the remaining 60 cases, 8 were receiving treatment in Institutions other than Corporation Institutions at the time of notification and of the other 52 cases 21 did not desire treatment, and 31 died prior to or within 14 days of notification. It will be seen that the proportion of patients who do not wish to receive treatment under the municipal scheme is very small.

The primary investigation of all notified cases is carried out by the Male Inspectors.

The Health Visitors re-visit the homes of the notified cases of Tuberculosis of the Lung, and make reports to the Clinical Tuberculosis Officer, thus keeping him in touch with the home conditions of patients whether they are attending the Dispensary or not.

The total number of such visits paid during the year was 11,263. The Clinical Tuberculosis Officer receives periodic reports on the visits made by the Health Visitors and reviews the whole of the cases on their visiting lists.

TABLE XLVII.—Deaths from Tuberculosis of the Lung occurring during 1937, divided into sex and age groups, showing whether sputum examined and result.

Table XLVII. shows that the diagnosis was confirmed by tubercle bacilli being demonstrated in the sputum in 85.96 per cent. of the cases of Sheffield residents dying in the City.

It is very desirable for statistical purposes that the sputum of every case, even though advanced, should be examined.

Table XLVIII. shows the length of time between notification and death of the 349 cases of Sheffield residents dying in the City during 1937.

From this Table it will be seen that 18.92 per cent. died before or within one month of notification, and 41.83 per cent. of the total deaths occurred within one year of notification. The percentage dying prior to, or within one month of notification is still large. It must be recognised, as regards tuberculosis, that in a certain proportion of the cases the disease runs a rapid course.

The Dispensary, situate in Queen's Road, is open on week-days from 9.0 a.m. to 5.0 p.m., except on Saturdays, when it is open from 9.0 a.m. to 12.30 p.m., and patients are seen on Mondays. Wednesdays and Thursdays in the morning and afternoon, on Tuesdays and Fridays in the afternoon, and on Saturday mornings. There are also two evening sessions, Tuesday and Friday, from 6.0 p.m. to 8.0 p.m., for the convenience of patients who are working. There is no branch Dispensary.

Public Health (Prevention of Tuberculosis) Regulations, 1925.

One case of Tuberculosis occurred in a Milk Handler during 1937, and the patient is still under treatment in Sanatorium.

ATTENDANCES AT THE DISPENSARY.

Patients who attend at the Dispensary may be divided into (a) Old Cases and (b) Cases seen for the first time.

OLD CASES—NOTIFIED.

The total number of notified cases who attended the Dispensary for treatment and supervision during the year was 6,283 and on December 31st, 1937, there remained on treatment and supervision 4,681. In addition 1,626 cases remained on General Supervision. The number of attendances of notified cases made during the year was 24,450.

Every effort is made by the Dispensary Staff to keep in touch with the notified cases.

NEW CASES.

Table XLIX. gives particulars of the cases at the time of their visit to the Dispensary and the result of the primary examination arranged under three headings, viz., (a) Cases notified prior to their first attendance at the Dispensary; (b) "Suspects"; (c) "Contacts."

The large figure of 2,408 sent to the Dispensary for diagnosis shows that the Medical profession in Sheffield continue to make full use of the Dispensary. In 94·51 per cent. of the cases notified during life the patients were sent to the Dispensary prior to notification. It is in this way that we find our early and curable cases. It is gratifying to find that the medical profession in Sheffield recognise the importance of early diagnosis, and to know that the co-operation between all members of the medical profession and the Dispensary is so good.

The ultimate diagnosis of these suspicious cases often entails observation for long periods, and, in many cases, residence in the observation beds in the Sanatoria.

Cases which are diagnosed in the General Hospitals are always treated as urgent cases, and are admitted to Sanatorium without delay.

The number of attendances at the Dispensary made by "Suspects" during 1937 was 5,931.

During the year, 106 patients were examined at home in consultation with private medical practitioners. In the majority of these home consultations the patient was not fit to attend the Tuberculosis Dispensary and this figure is in no sense an index of the number of personal consultations which take place with private practitioners. On 22 occasions patients were accompanied by their private doctor to the Dispensary. On other occasions patients are admitted direct from home to observation beds in Sanatorium as the result of a telephone conversation with their medical attendants.

### "CONTACTS."

1,836 "Contacts" from the homes of notified cases were examined, and of these it was found desirable to retain 23.20 per cent. for further observation and treatment.

The number of "Contacts" examined remains high. As it is among this section of the population that Tuberculosis is most likely to arise in the future, the examination and treatment, where necessary, of such "Contacts" is one of the most valuable activities of the Department.

**TABLE XLIX.**—Giving particulars of new cases examined during year and result of primary examination.

### PATIENTS OF SCHOOL AGE.

As in former years, the work of the Tuberculosis Dispensary amongst tuberculous children has been carried on in close co-operation with the School Medical Department. The Sanatorium beds provided are proving of much value in the preventive work amongst school children.

During recent years the number of children requiring investigation or treatment has fallen considerably, and there can be little doubt that one of the biggest factors responsible for this has been the large transference of population from crowded central areas to the Corporation Housing Estates.

The School Medical Officers refer all suspicious cases to the Dispensary for diagnosis, and the responsibility for diagnosis and notification rests with the Clinical Tuberculosis Officer.

The names of all children of school age who are known to have been exposed to infection in their homes are supplied to the School Medical Officer, so that he may observe them closely during their school life. If any indication of Tuberculosis is observed amongst these children they are immediately referred to the Tuberculosis Dispensary. In this way the School Medical Officer is kept in touch with a large proportion of the children who are known to have been exposed to infection.

The greater part of the work at the Dispensary on Wednesday and on Saturday morning is devoted to children of school age. One of the Assistant School Medical Officers attends each Session on Wednesday, except during the school holidays.

During the year 1937, 12,563 attendances (exclusive of new cases) were made by school children, 9,798 by notified cases, and 2,765 by observation cases.

Forty-six places at the Whiteley Wood Open-Air School, and twenty-six places at the Springvale House Open-Air School, were reserved for children selected by the Clinical Tuberculosis Officer.

Tubercle Bacilli were found in the sputum of three children, whose names were therefore taken off the school registers.

It will be observed from these figures that a large amount of work is being done among the school children of Sheffield, and I feel confident that this is the most encouraging part of our work, and is likely to be favourably reflected in our future tuberculosis results.

#### TOTAL ATTENDANCES.

The number of attendances at the Dispensary during 1937 was 37,882, which includes 3,364 attendances for ultra-violet light treatment.

### EXAMINATION OF SPUTA.

During the year 4,103 specimens of sputa were examined, 597 at Crimicar Lane Sanatorium, and 3,506 at the Dispensary. Of these 4,103 specimens 1,058 were found to contain typical tubercle bacilli.

### X-RAY DEPARTMENT.

3,171 Skiagrams were taken during the year, as compared with 3,876 during 1936 and 3,970 during 1935. A first-class skiagram is not only valuable as a permanent record of the condition of a chest, but is so useful in diagnosis that it may now be considered indispensible. It is now the routine practice to take an X-ray film of the chest of all adult cases who have been referred to the Dispensary for diagnosis and treatment.

In special cases "screening" by X-rays is carried out. This method of X-ray examination of the chest has its value in special cases but cannot in any way replace the taking of X-ray films. For routine purposes the disadvantages of "screening" is that no permanent record remains after the actual examination.

During 1937 there were 1,066 "screenings," compared with 546 in 1936. The increase is accounted for mainly by an increase in the number of cases continuing under artificial pneumothorax treatment.

REPORTS, ETC., TO MINISTRY OF PENSIONS, AND TO THE REGIONAL MEDICAL OFFICER OF THE MINISTRY OF HEALTH.

During the year, 2 certificates and reports with regard to ex-service men were furnished to the Ministry of Pensions and 90 reports on the condition of patients were made at the request of the Regional Medical Officer of the Ministry of Health.

### DOMICILIARY TREATMENT.

There were 22 insured persons receiving Domiciliary Treatment on December 31st, 1937. During the year, 40 Reports on Form GP 36 were received from Health Insurance Practitioners in respect of Insured Persons.

### AFTER-CARE.

The organisation with regard to after-care is carried on through the Dispensary.

Unsatisfactory cases are reported to the Hospitals Sub-Committee, who consider the cases and instruct the Tuberculosis Medical Officer to deal with them. Shelters are lent

to infectious cases, but it is found in Sheffield that the home surroundings are such that in very few cases is it possible to find adequate accommodation for a shelter. This form of isolation in Sheffield is of very little practical value. Beds and mattresses are lent to infectious cases who are unable to provide for themselves a separate bed, and during the year 55 beds and 55 mattresses were lent.

In all 374 beds were out on loan at the end of the year.

In addition to lending beds and mattresses, the Health Committee lend complete sets of bed-clothing to infectious cases who are unable, owing to their financial circumstances to procure them. During the year 50 sets of bed-clothing were lent.

RE-HOUSING OF INFECTIOUS CASES OF TUBERCULOSIS.

This scheme, which was commenced in 1928, is still in operation. The worst cases of overcrowding in households where there is a known infectious case of Pulmonary Tuberculosis have now been dealt with. The environmental conditions of new infectious cases are investigated immediately, and the families which require re-housing now come in the main from this latter group.

The families which have been re-housed are kept under special supervision by the Superintendent Tuberculosis Inspector.

The number of cases re-housed up to December 31st 1937, is given in the following Table:—

Year 1928 1929		Cases re-housed 22 36		terminated to 31/12/37  16 28		Scheme on 31/12/37 6 8		fter termination of special conditions  3 12
1930	٠.	29		25		4		10 .
1931		29		20		9		12
1932	• •	21		13		8	٠.	11
1933		34		23	• •	11	• •	13
1934		22	• •	13	• •	9	• •	6
1935		18		9		9		8
1936		20		3		17		3
1937		14		2		12		2
Totals		245		152		93		80

It was recognised at the outset when this Scheme came into operation, that while the improvement in environment would be to the benefit of the infectious case, the more permanent benefit of the scheme would be for the "Contacts" of these infectious cases.

The following table gives information as to the numbers of "Cases" and "Contacts" in each age group, who have been re-housed up to December 31st, 1937.

Age.		-1	1–5	5-10	10–15	15–20	20–25	25–35	35–45	45–55	55–65	65+	Totals

# HOUSING CONDITIONS OF INFECTIOUS CASES OF TUBERCULOSIS OF THE LUNG.

In 1931, 1933 and 1935, special investigations were made with regard to the housing conditions of infectious cases of Tuberculosis of the Lung on the Women Inspectors' Visiting Lists.

A further survey was made in December, 1937, of the whole of the infectious cases in the City, and the following figures indicate the comparative position:—

	1931	1933	1935	1937
No. of Cases having separate bed and room	685	789	802	727
<u> </u>	$(51 \cdot 04\%)$	$(56 \cdot 36\%)$	$(57 \cdot 74\%)$	(60.08%)
No. of Cases having separate bed only	355	334	279	236
	$(26 \cdot 45\%)$	$(23 \cdot 86\%)$	$(20 \cdot 09\%)$	(19.50%)
In these cases the conditions were as follows:				
No. with one person sleeping in another	017	000	01.4	178
bed in the same room	217	223	214	110
No. with two persons sleeping in	87	95	53	49
another bed, or beds, in the same room	01	อย	00	10
No. with three persons sleeping in another bed, or beds, in the same room	29	13	12	8
No. with four persons sleeping in another	_0	20		
bed, or beds, in the same room	13	3		1
No. with five persons sleeping in other				
beds in the same room	9			
No. of Cases not having separate bed	302	277	308	247
	$(22 \cdot 50\%)$	$(19 \cdot 78\%)$	$(22 \cdot 17\%)$	$(20 \cdot 41\%)$
No. of such cases with one other person			202	0.49
sleeping in the same bed	290	273	302	243

TOTAL NUMBER OF INFECTIOUS CASES REVIEWS	ED 1342	1400	1389	1210

<sup>\*</sup> In this case a shelter was lent, which was used by the patient except in the winter.

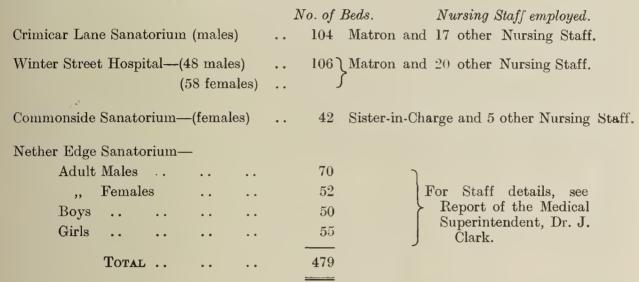

Every known infectious case in the City has been included in the Review for 1937.

Consideration of the figures for the last four reviews shows that a fairly stable position has been reached with regard to separate bed and room accommodation. It should be realised that as the number of positive cases on the Register increases the proportion of survivors in good health correspondingly increases, and some of these people after a time, knowing that they are in good health, cease to use separate beds. The other factor, which will always prevent the achievement of 100 per cent. of patients in separate beds, is, that among the older people, particularly those over 50 years of age, it is often very difficult to persuade the partner of the infectious case to change to a single bed—the actual danger of infection at ages over 50 years cannot be said to be really serious.

### CITY SANATORIA.

It is pleasing to record that the number of beds allocated for the treatment of All Forms of Tuberculosis in the City of Sheffield appears to have reached a maximum figure, and, fortunately, long waiting lists for institutional treatment are a thing of the past.

The number of beds provided for the treatment of Respiratory Tuberculosis, and the nursing staff employed, is as follows:—

The following Table shows the number of admissions, discharges, and deaths at the various Institutions:—

**TABLE LI** —City Sanatoria:—Admissions, discharges, deaths, etc.

			Admissions	Discharges	Deaths	Number remaining at Dec. 31st, 1937

		Classification of Cases received during the year	Pulmonary. Observation	Early	Intermediate	4. Advanced	Percentages.	Observation	Early	3. Intermediate	4. Advanced
H		1 5	_	ં જાં	<u>ښ</u>	4		j.	લ	33	+

Of the patients treated in Sanatoria during the year, 49.3 per cent. of the men were sputum positive, 51.1 per cent. of the women were sputum positive, and 1.3 per cent, of the children were sputum positive.

It will be seen that a large proportion of the cases treated in the Sanatoria during the year were in the early and curable stage of the disease.

All children admitted to the Nether Edge Hospital and the Winter Street Hospital Children's Wards now have intra-dermal tuberculin tests carried out (Mantoux test) as a routine. This is a useful test as it distinguishes between children who have been infected and children who have not been infected by the tubercle bacillus.

51.9 per cent. of mantoux tests done of boys proved positive and among the girls the percentage was 73.2. It will be appreciated that a number of the children are admitted to these Wards for observation.

In the field of treatment of pulmonary tuberculosis it must be admitted that a specific cure for tuberculosis has not yet been found and the fundamentals in treatment still remain—rest, good food, fresh air. In certain cases other methods assist and among these is collapse therapy or artificial pneumothorax treatment. This form of treatment has now been available in the City Sanatoria for some years. In only a small proportion of cases is this method suitable. The proportion varies in different localities and is relatively low in Sheffield. During 1937 there were twenty-eight fresh inductions. Out-patients' refills are not carried out at the Tuberculosis Dispensary but are carried out at the various Tuberculosis Hospitals. During the year there were 565 out-patients' attendances of pneumothorax cases at hospitals for refills.

Tuberculin has been used in the treatment of pulmonary and non-pulmonary cases for several years. During the last seven years 226 patients have received courses of tuberculin treatment. In many cases the immediate response to this form of treatment is good but it is too early yet to give an opinion on the later results.

Treatment with gold salts was tried for several years up to about three years ago. I could not satisfy myself that this form of treatment appreciably affected the course of the disease and it is now rarely used.

Finally, I would like to pay tribute to my colleagues. The medical work in a Department such as this, with a vast Dispensary system and nearly 500 sanatorium beds, demands that the Medical Officers shall to some extent sink their individuality and work together as a team. It is with pleasure, therefore, that I record my thanks to them for the high standard of clinical work they have maintained, and for their loyal co-operation.

### NON-PULMONARY FORMS OF TUBERCULOSIS

Report by C. Lee Pattison, M.B., B.S.(Lond.), M.R.C.S., L.R.C.P., Surgical Tuberculosis Officer and Medical Superintendent of King Edward VII Hospital.

MEDICAL AND NURSING STAFF OF KING EDWARD VII HOSPITAL:-

Medical Superintendent and

Surgical Tuberculosis Officer—C. LEE PATTISON, M.B., B.S. (Lond.), M.R.C.S., L.R.C.P.

House Surgeon .. .. —Kathleen Shannon, M.B., B.Ch., B.A.O.

Matron and 40 other Nursing Staff.

NOTIFICATIONS AND DEATHS.

The number of notified cases and the death rate from the various types of non-pulmonary tuberculosis in the year 1937 is shown in Table LIII. which follows:—

TABLE LIII.—Non-pulmonary Tuberculosis: Notifications, Deaths and Death Rates, year 1937.

CL	ASSIFICA	TION			Number of Cases Notified	Number of Deaths	Death Rate per 1000 of the Population

### HOSPITAL TREATMENT.

KING EDWARD VII HOSPITAL.

Children under 16 years of age suffering from Non-Pulmonary Tuberculosis are treated in King Edward VII Hospital. A few beds are available in this hospital for children sent by the local authorities of areas outside Sheffield, the full cost of maintenance being borne by these authorities. Information regarding patients suffering from Orthopædic diseases will be found in the Maternity and Child Welfare section of this Report.

In the following table are given particulars of cases of non-pulmonary tuberculosis which were discharged during the year 1937 after treatment in King Edward VII Hospital:—

TABLE LV.—Non-Pulmonary Tuberculosis: Cases Discharged from King Edward VII Hospital during the year 1937.

CLASSI	FICATION.			Males.	FEMALES.	Totals.

Other sites .				$\frac{4}{5}$	$\begin{array}{c} 4 \\ 12 \end{array}$	8 17
Тота		••	•••	102	73	175

<sup>\*</sup> Observation cases are those in which the diagnosis was uncertain on admission and which later proved to be non-tuberculous.

Operations:—During the year 391 Aspirations of abscesses, and 54 other operations were performed.

PLASTER OF PARIS SPLINTS, ETC. :—305 Plaster of Paris splints were applied and 54 Celluloid splints were made.

### NETHER EDGE HOSPITAL.

Adult patients with bone or joint tuberculosis are treated in the Nether Edge Hospital under the supervision of the Surgical Tuberculosis Officer and approximately 30 beds are in daily occupation. The majority of the patients are suffering also from pulmonary tuberculosis.

### OUT-PATIENT SUPERVISION.

An Out-patient Clinic is held by the Surgical Tuberculosis Officer at the Tuberculosis Dispensary on Wednesday and Friday afternoons and in the evening of the first Tuesday in the month. Patients who attended the Clinic for the first time in the year 1937 numbered 356, of whom 22 were resident outside Sheffield and were sent to the Clinic by the West Riding County Council for diagnosis only and not for treatment. The West Riding Authorities pay the Council for the examination and report in such cases. The sources from which the 334 Sheffield residents attended were as follows:—

Medical Practitioners					95
Clinical Tuberculosis Officer					72
Maternity and Child Welfare	Centre				22
Sehool Medical Department					70
Voluntary Hospitals					6
Other Sources					<b>6</b> 9
	m 1				
	Total	• •	• •	• •	334

294 of these 334 cases were retained for treatment, 37 of them being men, 35 women, 134 boys and 88 girls. A classification of these cases according to sex and the organs affected is given in the following table:—

**TABLE LVI.**—Non-Pulmonary Tuberculosis: Out-patient Cases treated during the year 1937.

('LASSIFICATION		MALES	FEMALES	Тотац
Spine		20 15 16 2 3 4 72 35 1	17 16 11 2 4 4 50 17	$\begin{array}{c} 37 \\ 31 \\ 27 \\ 4 \\ 7 \\ 8 \\ 122 \\ 52 \\ 2 \\ 4 \end{array}$
Genito-Urinary System  Totals	• •	 171	123	294

Attendances at the Out-patient Clinic during the year 1937 numbered 4,861 as compared with 4,863 in 1936.

### ULTRA-VIOLET LIGHT TREATMENT.

Ultra-violet light therapy was continued both at the King Edward VII Hospital and at the Tuberculosis Dispensary. Six sessions per week were held at the Dispensary, where there were 3,364 attendances during the year.

# PREVENTION AND TREATMENT OF VENEREAL DISEASES.

The Venereal Disease Treatment Centres at the Royal Infirmary, the Royal Hospital, and the Jessop Hospital for Women, continued in operation during the year 1937.

It will be noted from Table LVIII. that there was a slight increase from the year 1936 in the total number of new cases treated, but a decrease in the average number of attendances per case.

The total attendances fell from 38,574 in 1936 to 36,214 in 1937.

The total cost of treatment during the year was £6,491 and the average cost per case was £6 13s. 5d. The corresponding figures for the year 1936 were £6,302 and £6 11s. 7d. respectively.

Table LIX. gives particulars of pathological examinations made in the Bacteriological Laboratory of the University of specimens sent for diagnostic purposes by treatment centres and medical practitioners.

Table LX. gives particulars of the Clinics at the Sheffield Treatment Centres together with a statement of the average number of patients attending during each quarter of the year.

Table LXI. gives a summary of the returns from the three Centres with regard to persons dealt with for the first time distinguishing between Sheffield residents and residents of other areas who have come in for treatment.

Table LVII. gives particulars of the diseases treated in each year since the commencement of the scheme. The table is interesting as showing the decrease in the number of Syphilis and Gonorrhœa patients of both sexes.

TABLE LVII.—Persons treated for the first time at Venereal Disease Treatment Centres, 1918 onwards.

In the figures furnished by each of the Treatment Centres for the years 1934 and 1935, patients who have previously attended at another Centre are included. The figures for the years 1936 and 1937 represent persons who have not previously attended another Centre,

### POOR LAW MEDICAL OUT-RELIEF.

In connection with the administration of Poor Law Medical Out-relief there were 33 District Medical Officers at 31st December, 1937, and with one exception these appointments were all held upon a part time basis by general practitioners.

The aggregate of the Surgery Consultations and home visits recorded by the District Medical Officers in respect of the year 1937 was 142,848, which corresponds to a figure of 171,963 for the year 1936 and shows a reduction of 29,115 from that figure.

At the end of the year there were 142 local establishments upon the list of chemists who were authorised to dispense the prescriptions of the District Medical Officers and the terms governing this dispensing are almost identical with those which obtain in the National Health Insurance Dispensing Services.

143,169 prescriptions were dispensed by these chemists during the year ended 31st March, 1938, as against 173,143 in the previous year, a reduction of 29.974.

### VACCINATION.

Particulars as to Vaccination are given in the table below regarding births registered in each year since this function was transferred from the Poor Law Authority to the Health Committee. The year 1936 is the latest year for which complete figures are available.

It will be seen that the figure of percentage of births in which successful vaccination took place has consistently decreased, whilst on the other hand the percentage of conscientious objections has shown a steady increase.

TABLE LXII.—Return as to the Vaccination of children whose births were registered in the City during the years 1931 to 1936.

	18							for s	PERCENTAG	es of Births
YEAR	Number of Births Registered	Number of successful Vaccinations	Insusceptible of Vaccination	Had Small Pox	Number of conscientious objections	Died unvaccinated	Vaccination Postponed	Pending, Not Accounted for and Removals	Vaccinated successfully	Exempted by conscientious objections

1935	8,017	2,866	32	_	4,333	349	92	345	35.7	54.0
1936	8,282	2,842	57		4,590	390	89	314	34.3	55.4

## PATHOLOGY AND BACTERIOLOGY.

The greater proportion of the pathological and bacteriological examinations which are necessary in the diagnosis of disease is undertaken on behalf of the Health Committee by the Pathological and Bacteriological Departments of the University of Sheffield and the staff of the University also carries out the bacteriological examination of milk. Particulars relating to the examinations made at the University for the Committee during the year 1937 are given below under the several headings:—

	Number of Examin- ations.	Cost per Examin- tion.		'otal Cost.	
Specimens for—			0		
Diphtheria	9,770	3/6	£ 1709	s. 15	d. 0
Typhoid Fever, etc	1,499	5/-	374	15	0
for the presence of the Tubercle bacillus	974	15/-	730	10	0
Milk for the presence of the bacillus Coli	491	4/-	98	4	0
for the bacterial Count	327	6/-	98	2	0
Virulence tests for the presence of the bacillus Diphtheriæ, and other special examinations	1.593	Ranging from 3/6 to £2/2/0	974	19	0
	Total		£3,986	5	0

In the Venereal Disease section of this Report are given the numbers and other particulars of the various examinations carried out at the University to assist in the diagnosis of Syphilis and Gonorrhæa.

Certain bacteriological examinations were undertaken during the year at the City General Hospital and at the Infectious Diseases Hospital. Microscopic examinations of sputa were made by the staff of the Tuberculosis Dispensary. Milk was examined microscopically for Tuberculosis by the Veterinary Officers and the Reductase test was applied to a certain number of milk samples. Particulars regarding these various examinations are given in the appropriate sections of the Report.

### AMBULANCE FACILITIES.

Cases of Non-Infectious Disease and Accidents.—The major portion of the Ambulance requirements of the City come under this heading. These facilities are under the administration of the Central Ambulance Service, in connection with which is established an Ambulance Station situated in Corporation Street. The Sheffield Hospitals Council, the Health Committee and the Watch Committee all participate in this scheme and the ambulances which belong to each of these bodies are housed at the Ambulance Station, their use being in the main general to all the services.

At the 31st March, 1938, the fleet of ambulances consisted of 16 vehicles—nine from the Sheffield Hospitals Council, four from the Health Committee and three from the Watch Committee. The Watch Committee vehicles, which are provided with special fittings to meet the requirements of accident and casualty cases, are used almost entirely for Watch Committee cases.

The scope of the service, outlined in its relation to the participating bodies, is roughly as follows:—

### SHEFFIELD HOSPITALS COUNCIL:

Admissions and discharges in connection with the Sheffield Voluntary Hospitals, the Sheffield Radium Centre, the Edgar Allen Institute, and the Nursing Homes in Sheffield and district. The area covered is approximately that within twenty miles radius of Sheffield.

### HEALTH COMMITTEE:

Admissions and discharges in connection with the City General, Nether Edge and King Edward VII Hospitals, and the Tuberculosis Dispensary, Queen's Road; also by arrangement made by the Health Committee with the Public Assistance Committee, the transfer of cases from their homes to Fir Vale House, the Wadsley Mental Hospital, and other Institutions as required.

### WATCH COMMITTEE:

The conveyance of accident and casualty cases from the scenes of accidents to the nearest hospitals. The cases of the Watch Committee proper are those where the accidents happen within the City of Sheffield, but by arrangements made by the Watch Committee with the West Riding of Yorkshire and Derbyshire Constabularies, the ambulances also respond to the calls for accident cases in those areas.

There are also, in connection with the large works in the City, a number of privately owned ambulances for accident and emergency cases.

Cases of Infectious Disease.—For the special requirements of cases of infectious disease there are four ambulances which are not controlled by the Central Ambulance Station, but are stationed at the City Fever Hospital, Lodge Moor.

### DISINFECTION AND CLEANSING.

1.	Number of houses disinfected as a result of infectious diseases, including		
	disinfection of bedding, clothing, etc	• •	3,789
2.	Number of cases of scabies from which bedding, clothing, etc. were collected		
	and disinfected		152
3.	Total number of cases of scabies treated at the Cleansing Station		323
4.	Number of midwives attending for baths and disinfection of clothing		65
5.	Number of persons attending for cleansing before being re-housed		4.846

### CYANIDE DISINFESTATION.

Rehousing under Slum Clearance Schemes.

A specially trained staff is engaged upon the disinfestation necessitated in connection with the large number of removals from slum clearance areas to Corporation housing estates. Disinfestation is by the cyanide gas method and the disinfestation plant is established in premises adjoining the Penistone Road Destructor. Air-tight steel containers, mounted upon trailers and drawn by motor tractors, remove the articles of furniture to the Disinfesting Station and convey them, after disinfestation in the containers, to the new Corporation estate houses. Beds and bedding are dealt with by the steam disinfector, but otherwise the entire contents of the vacated houses in clearance areas are treated with cyanide gas.

During the year 1937 the furniture and effects of 2,864 families were disinfested by cyanide, and the beds and bedding treated by steam disinfestation. This figure includes 301 families other than those removed from clearance areas.

As a complement to the disinfestation of furniture in sealed containers by cyanide, the staff also undertakes the disinfestation of certain Corporation houses which have been found upon inspection to be infested with bugs. The form of cyanide used in house disinfestation is Zyklon B, which is found to be easier to handle than liquid hydrocyanide. During the year there were 392 houses disinfested, the beds and bedding in these cases, too, being treated by steam disinfestation.

All possible measures are taken, in the way of advice given by the staff and by the distributing of literature, to educate tenants in preventing infestation or re-infestation.

### HOUSING.

Housing Act, 1936.

The number of houses involved in Clearance Areas for which Official Representations were made during the year is 5,378, in addition to which Representations were made under Section 11 of the Housing Act 1936 with regard to 763 individual unfit houses, and under Section 12 of the Housing Act 1936 with regard to 14 individual unfit dwellings.

Six public Inquiries were held by the Minister of Health's Inspectors in respect of 66 Areas involving 3,232 houses during the year, as follows:—

Date of Inquiry.		(	Clearance Areas Numbered.	No. of Houses Involved.
16th February, 1937	 		205 — 217	358
16th, March, 1937	 		218 — 228	443
31st May, 1937	 		229 - 232	546
29th June, 1937	 		200 - 202  and  204	544
21st September, 1937	 		233 - 253	628
16th November, 1937	 		255 - 265	702 $713$
			266 - 267	11 \\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \
		Tota	1	3,232

Full details of the work done in connection with Clearance Areas and individual unfit houses and the position on 31st December, 1937, are given in the appropriate statements and tables which follow, and the abbreviations used in these statements are given below:—

### Abbreviations-

A = Arbourthorne Estate.

Wy = Wybourn Estate.

S = Shirecliffe Estate.

PC = Parson Cross Estate.

M = Manor Estate.

HSF = Hawley Street Flats.

Wpe = Woodthorpe.

Shn = Shiregreen.

CB = Crofts Buildings.

## HOUSING-CLEARANCE AREAS.

Statement  $\Lambda$ :—Clearance Areas included in previous Annual Reports for which Orders had been made by the Minister of Health but on which the necessary work had not been completed by 31st December, 1936.

\* Denotes that houses are included from each of which more than one family has been rehoused on different Estates.

# TABLE LXVI.—Housing Statistics, 1937.

1. Inspection of Dwellinghouses during the year.—	
(1) (a) Total number of dwellinghouses inspected for housing defects (under Public Health or Housing Acts)	13,623
(b) Number of Inspections made for the purpose	37,791
(2) (a) Number of dwellinghouses (included under sub-head (1) above) which were inspected and recorded under the Housing Consolidated Regulations	
$1925 \dots \dots \dots \dots \dots \dots \dots \dots \dots \dots \dots \dots \dots \dots \dots \dots \dots \dots \dots$	Nil.
(b) Number of inspections made for the purpose	Nil.
(3) Number of dwellinghouses found to be in a state so dangerous or injurious to health as to be unfit for human habitation	6,155
(4) Number of dwellinghouses (exclusive of those referred to under the preceding sub-head) found not to be in all respects reasonably fit for human	
habitation	Nil.
2. Remedy of defects during the year without service of formal Notices:—  Number of defective dwellinghouses rendered fit in consequence of informal action by the Local Authority or their Officers	6,785
3. Action under Statutory Powers during the year :—  (a) Proceedings under Section 9, 10 and 16 of the Housing Act, 1936 :—  (1) Number of dwellinghouses in respect of which notices were served requiring repairs	Nil.
(2) Number of dwellinghouses which were rendered fit after service of formal notices:—	1111.
(a) By owners	Nil.
(b) By local authority in default of owners	Nil.
(b) Proceedings under Public Health Acts:—	
(1) Number of dwellinghouses in respect of which notices were served requiring defects to be remedied	481
(2) Number of dwellinghouses in which defects were remedied after service of formal notices:—	
(a) By owners	287 —
(c) Proceedings under Sections 11 and 13 of the Housing Act, 1936:—	
(1) Number of dwellinghouses in respect of which Demolition Orders were made	312
(2) Number of dwellinghouses demolished in pursuance of Demolition Orders	122
(d) Proceedings under Section 12 of the Housing Act, 1936:—	
(1) Number of separate tenements or underground rooms in respect of which Closing Orders were made	18
(2) Number of separate tenements or underground rooms in respect of which Closing Orders were determined, the tenement or room having been rendered fit	Nil.
4 H	
4. Housing Act, 1936—Part IV—Overcrowding:—	4.001
(a) (i) Number of dwellings overcrowded at the end of the year	4,891
(ii) Number of families dwelling therein	4,891 27,897
(b) Number of new cases of overcrowding reported during the year	37
(c) (i) Number of cases of overcrowding relieved during the year	456
(ii) Number of persons concerned in such cases (equivalent No.)	$2,305\frac{1}{2}$
(d) Particulars of any cases in which dwelling houses have again become over- crowded after the Local Authority have taken steps for the abatement of overcrowding	Nil.

The following table gives the number of new dwelling-houses built in the City since 1st April, 1887, the figures relating the municipal year which ends on 31st March.

TABLE LXVII—Houses built in the City since 1st April, 1887.

Yded	Number of	Year ended	Number of	Year euded	Number of
Year ended 31st March	Houses Built	31st March	Houses Built	31st March	Houses Built
				\ <u></u>	
1888	928	1905	1,963	1922	1,184

#### CLOSET ACCOMMODATION AND ASHBIN ACCOMMODATION.

Privy Conversion work in the City was completed some years ago with the exception of isolated cases situated in semi-rural districts where it was not practicable to carry out the work owing to sewers not being available within the statutory distance from the houses, or owing to some other special circumstances.

The schemes for the converting of trough, waste-water and pail closets into pedestal waterclosets and for the provision of additional waterclosets to bring the accommodation up to the standard of one closet per house, commenced in 1928, were completed in 1934 excepting where special circumstances prevented the work being done.

The following work has been carried out during the year:—		
Number of privies converted into pedestal waterclosets		14
(Twelve of these were situated in the Norton Added Area and two additional added Area and two additional added Area and two additional added Area and two additional added Area and two additional added Area and two additional added Area and two additional added Area and two additional added Area and two additional additional added Area and two additional additio	onal	
waterclosets were also provided along with these conversions).		
Number of trough closets converted into pedestal waterclosets		<b>6</b> 8
Number of trough closets abolished		16
Number of waste-water closets converted into pedestal waterclosets		5
Number of waste-water closets abolished		2
Number of pail closets converted into pedestal waterclosets		22
Number of pail closets abolished		5
Number of additional pedestal waterclosets provided so as to bring the		
accommodation up to the standard of one watercloset per house		216

Number of cesspools abolished		37
(36 of these were situated in the Norton Added Area and the tot of cesspools abolished in the Norton Area since its inc		
with Sheffield is 170).		
Number of Fixed Ashpits abolished		6
Number of movable ashbins provided in lieu thereof		25
Particulars follow of the number of sanitary conveniences in the C	ity at 31st D	ecember,
1937 :		
Privies with fixed receptacles		219
Privies with removable receptacles (or pail closets)		183
Fresh-water Closets		148,257
Waste-water Closets		44

REGISTRATION OF PREMISES USED FOR PREPARATION OR MANUFACTURE OF POTTED OR PRESERVED MEAT, FISH OR OTHER FOOD INTENDED FOR SALE OR THE MANUFACTURE FOR SALE OR SALE OF ICE-CREAM.

During the year 1937 applications under Section 186 of the Sheffield Corporation Act, 1928, were dealt with by the Committee as follows:—

		Applica- tions considered	Applica- tions granted	Applica- tions refused
Manufacture of Potted Meat, Fish, etc.	 	30	30	_
Manufacture and Sale of Ice Cream	 	6	6	
Sale only of Ice Cream	 	48	48	
Totals	 	84	84	

#### REGISTRATION OF PREMISES FOR FISH FRYING.

During the year four applications for registration of premises for fish frying were granted and five were refused. In addition registration was cancelled in the case of twenty premises which had been closed for over 6 months, also 14 other premises were demolished.

The number of fish fryers on the register at the close of 1937 was 550.

The number of visits paid to premises of this class was 639.

## LICENSING OF PREMISES FOR OTHER OFFENSIVE TRADES.

These licences are renewable half-yearly. At the end of the year six premises, which were in connection with the following trades, continued to be licensed:—2 Tripe Boiling and Dressing; 2 Rag and Bone Dealers; 2 Rag Washing. 2 applications to establish the business of Rag and Bone dealers were refused.

All the premises where Offensive Trades are carried out were periodically visited by the Sanitary Inspectors during the year to see that there was compliance with the Byelaws.

#### HOUSES LET-IN-LODGINGS.

The Sanitary Inspectors visited these premises from time to time in collaboration with the Health Visitors, with a view to remedying the defects which were found and enforcing the Byelaws.

#### RAG FLOCK ACTS, 1911 AND 1928.

There are thirty-eight premises in the City to which the above Acts apply and these are chiefly Upholsterers' and Bedding Mannfacturers' establishments. There are no premises where rag flocks are manufactured. In every case where rag flocks were used they were obtained under a guarantee that they comply with the standard set forth in the Acts.

# SHOPS ACT, 1934.

The Shops Act, 1934, is an Act to regulate the hours of employment of persons under the age of eighteen years employed about the business of wholesale or retail shops or elsewhere in connection with wholesale or retail trade or business, and to make provision as to the arrangements in shops and warehouses for the health and comfort of workers.

Section 10 of the Act relates to ventilation, temperature, suitable and sufficient sanitary conveniences, lighting, washing facilities and facilities for the taking of meals by persons employed in shops or warehouses. As a result of the action taken under this Section the following work was carried out during the year 1937:—

No. of premises at which satisfactory means of ventilation were provided	9
No. of premises at which satisfactory means of heating were provided	19
No. of premises at which satisfactory means of lighting were provided	4
No. of premises at which satisfactory facilities for taking meals were	
provided	21
No. of premises at which satisfactory facilities for washing were made	
available for the use of persons employed in or about the premises	20
No. of premises at which satisfactory sanitary conveniences were provided	26

In addition to the above there were 27 premises which were found to comply in all respects with Section 10, and exemption certificates were granted in respect of 16 other premises.

## FACTORIES, WORKSHOPS AND WORKPLACES.

TABLE LXVIII.—Inspections; Defects found: and action taken during 1937.

Premises	Number of				
Tromises	Inspections	s Written	Notices	Occupiers Prosecuted	
Factories (including Factory Laundries) Workshops (including Workshop Laundries) Workplaces (Other than Outworkers' Premises)	904 302 286		16 3 8	=	
Total	1492		27		
Particulars	N	umber of De	fects	Number of offences in	
Tarticulars	Found	Remedied	Referred to H.M. Inspector	respect to which Prose- cutions were instituted	
Nuisances under the Public Health Acts:  Want of cleanliness  Want of ventilation  Overcrowding  Want of drainage of floors  Other nuisances	$\frac{5}{10}$	24 2 - 8 36	=

Offences under the Factory and Workshop Acts:— Illegal occupation of underground bakehouse Other offences	. 14	10	_	=	
Total	. 161	137	_	_	

## WATER SUPPLY OF THE CITY.

The water supply of the City is in all respects satisfactory as regards both quality and quantity. No new sources of supply have been acquired during the year and there have been no extensions of mains other than the provision of feeder mains up to 18 inches in bore and of distributory mains which have been necessitated by new housing schemes.

A qualified bacteriologist and chemist is engaged in the permanent service of the Sheffield Corporation Waterworks and bacteriological examinations are made regularly of the waters from the respective sources. Samples are taken of the water as it is received by the consumers and there were 298 such examinations made during the year 1937. 87.6 per cent of the samples showed no bacillus coli present in 100 millilitres of water. There is complete co-operation and the Public Health Department is furnished by the General Manager and Engineer of the Waterworks with the results of the examinations referred to.

## CANAL BOATS ACTS.

There were no new registrations of Canal Boats in the City during the year 1937.

24 visits were paid to the Canal during the year and 102 inspections of boats were made. A statement of the number of persons living on board the boats at the time of the inspections is given below and it should be explained that in certain instances families have been counted more than once according to the number of times a particular boat may have visited the City.

Children under 5 years of age	 ٠.	 8
Children between 5 and 14 years of age	 	 4
Males over 14 years of age	 	 103
Females over 14 years of age	 	 37
Total	 	 <b>1</b> 52

The average number of persons living on each boat was 1.5.

There were 29 cases of infringements of the Canal Boats Acts and Regulations as detailed below:—

Absence of Certificate				 	11
Want of marking, letter	ring or	numberin	ıg	 	5
Certificate not identifying	ig owner			 	1
Painting of cabins				 	1
Repairs to cabins				 	2
Absence of water casks	or defect	tive wate	er casks	 	1
Cleanliness of cabins				 	
Ventilation of cabins				 	2
Separation of sexes				 	
Children not attending s	school			 	6
		Total		 	29

All necessary measures were taken with regard to these infringements and it was not necessary to institute any legal proceedings.

There were no cases of Infectious Disease on board the boats during the year nor was it necessary to detain any boats for cleansing or disinfection.

## SMOKE ABATEMENT.

The Sheffield, Rotherham and District Smoke Abatement Committee was formed in April, 1930, and commenced to function in May, 1930. It was to continue in operation for five years at least and thereafter until one of the constituent authorities gave notice on the 1st January in any year of its intention to withdraw, when the Committee was to dissolve on the following 31st March.

The constituent authorities, comprising the Councils of the City of Sheffield, the Rotherham County Borough, the Stocksbridge, Rawmarsh and Greasboro Urban Districts and the Rotherham Rural District, passed the necessary resolutions to combine to carry out their duties under Section 92 of the Public Health Act, 1875, in respect of Smoke Nuisances and to concur in appointing the Sheffield, Rotherham and District Smoke Abatement Committee and also entered into an agreement embodying the terms of combination, concurrence and appointment and ancillary provisions. This Committee is the only Statutory Committee of its kind in the country, the other Joint Committees formed on this subject acting only in an advisory capacity.

Atmospheric Pollution.—There are three fixed gauges in Sheffield used for the purpose of measuring atmospheric pollution and these are stationed at Attercliffe, Surrey Street and Nether Green. In addition there are two mobile gauges which are used to further assist in ascertaining the variation of the pollution deposits in the City. One of these was stationed at Ewden Valley Waterworks and the other at Dore. The following table summarises the monthly records of the five stations during the year.

**TABLE LXIX.**—Solid Matter deposited at the Sheffield Collecting Stations during the year 1937.

				TD.	~	2.5				
				Tons per Square Mile.

In conjunction with the pollution gauges at the fixed stations, gauges are placed for the measurement of ultra-violet rays by the Acetone Methylene Blue Test. Daily readings are taken and below are set out the averages of the units recorded at the various stations.

TABLE LXX.—Ultra Violet Ray Records at the three Sheffield Stations during the year 1937.

			AVERAGE UNITS PER DAY.						
Month.			Atterd	eliffe.	Nether	Green.	Surrey Street.		
			Quartz	Glass	Quartz	Glass	Quartz	Glass	
January	• ,	• •	0.09	0.06	0.10	0.08	0.09	0.09

SULPHUR DETERMINATION.—Daily Records for the determination of sulphur in the atmosphere are taken by the volumetric method at Surrey Street and by the lead peroxide method at Handsworth, Surrey Street, Dore and Ewden Waterworks. The lead peroxide method, having proved itself reliable and convenient, has been adopted by the Department of Scientific and Industrial Research as a standard method of measurement. With the volumetric method it has been found that the acidity of the atmosphere varies inversely with the velocity of the wind, abnormal deposits occurring during fog and humid atmospheric conditions. This method is accurate and gives a definite figure for sulphur in the atmosphere, but it requires personal attention and the services of a chemist if records are to be continuous and satisfactory.

TABLE LXXI.—Sulphur determination by the Lead Peroxide method at the four Sheffield Stations during the year 1937.

			MILLIGRAMS PER 100 SQUARE CENTIMETRES PER DAY

TABLE LXXII.—Details of the work done in Sheffield by Smoke Inspectors during the year 1937.

Number	of Chimneys observe	ed			 	5,831
Number	of minutes smoke en	nitted			 	$11,561 \cdot 5$
Average	minutes of smoke en	nission	per hal	f hour	 	1.98
Number	of Notices served				 	70
,,	Intimations serve	d			 	<b>35</b> 9
,,	Advisory Visits				 	529
,,	Complaints answe	red			 	112
,,	Chimneys Demoli	shed			 	8
,,	,, Raised				 	12
,,	,, Erected	1			 	30

Standards as to Smoke Emission.—Owing to increased industrial activity it has been found somewhat difficult for the staff to keep a systematic observation of the total number of chimneys in the area. In order to overcome this difficulty it was resolved to reduce the observation time of one hour to that of thirty minutes, from July 1st, 1937. This has brought the method of smoke observation in line with that of other industrial centres, and in closer conformity with the time standard recommended by the Ministry of Health and has enabled the Staff to increase the number of observations, as will be noted by the statistics. The revised time standards are as follows:—

Number attached to							ion permitted 30 minutes.	in
One or two						2 m	inutes.	
Three					• •	3	"	
Four or more	9		• •			4	,,	
One or more	boilers	and one	e or more	furnaces		4	,,	

Prosecutions.—During the year nine cases were reported to the Committee for their consideration. In three cases the firms concerned put forward schemes of reconstruction and in a further three cases it was resolved that no action be taken, the infringements not justifying application to the Court for Magistrates' Orders. Police Court proceedings were taken against two steelworks, a Magistrates' Order being granted in one case and an adjournment for six months being allowed in the second case to enable the necessary reconstruction work to be carried out. A Warning letter was sent to the firm concerned with regard to a further nuisance.

Instructional Classes for Stokers and Furnacemen.—The lectures and instruction classes which have been in operation with the Sheffield Trades Technical Societies have been continued.

Research work has been continued by the Joint Advisory Committee under the Chairmanship of Professor R. V. Wheeler, D.Sc., F.I.C., of the Department of Fuel Technology of the Sheffield University on the lines indicated in previous reports. Additional information regarding this research work and a comprehensive review of the activities in connection with Smoke Abatement in Sheffield and in the surrounding areas co-operating in the Scheme are to be found in the Annual Report of the Sheffield, Rotherham and District Smoke Abatement Committee.

## FOOD AND DRUGS.

## THE MILK SUPPLY.

The daily average consumption of milk in Sheffield during the year 1937 was 26,424 gallons, which represents 0.408 pints per head of the population. The daily average consumption in 1936 was 25,094 gallons, or 0.387 pints per head and it will be seen that although the daily consumption is still comparatively small it is a figure which has increased during the year.

The areas in which the 22,569 gallons of milk were produced which were brought in the City for sale and the method of transporting it are given below:—

							Gallons.
From	Derbyshire	by	road			 	16,638
,,	,,	,,	rail			 	710
"	Yorkshire	by	road			 	4,953
,,	,,	,,	rail			 	242
,,	Nottingham	shii	re by	road		 	18
"	,,		,,	rail		 	8
				Tota	als	 	22,569

There are 710 persons registered for the retail purveying of milk in Sheffield and of this number 296 are resident outside the City area. The registered purveyors of milk are classified as follows:—

Producer-retailers—		
resident in the City		116
resident outside the City		254
Persons who purchase milk for retailing—		
resident in the City		186
resident outside the City		42
City Shopkeepers who retail milk from Registered Dairies		112
Total number of payang registered for retailing will-		710
Total number of persons registered for retailing milk	• •	710

In addition to the persons in the above statement there are four firms which sell sterilised milk in sealed bottles through the medium of shopkeepers in the City. Only one of these firms has its sterilising depot in the City. The average daily sale of this milk during the year 1937 amounted to 735 gallons or a decrease of 129 gallons from the year 1936.

## FOOD AND DRUGS (ADULTERATION) ACT, 1928.

It will be seen from Table LXIII. on page 184 that of the total of 1,253 formal and informal samples of milk and other food commodities which were taken during the year under the Food and Drugs (Adulteration) Act, 1928, there were 61, or 4.9 per cent, which

proved to be adulterated. The statement which follows gives information relating to the samples taken in the five years 1933 to 1937:—

Year	Total Number of Samples taken.	Percentage of Adulteration.
1933	1,054	$4 \cdot 7$
1934	1,201	$7 \cdot 2$
1935	1,139	$5\cdot 5$
1936	1,210	$9 \cdot 0$
1937	1,253	4.9

904 samples of milk, exclusive of skimmed milk, were taken under the Act during the year. The standard of a genuine sample is that it should contain 3·0 per cent of milk fat and 8·5 per cent of non-fatty solids and 47 of the samples, or 5·2 per cent, failed to reach this standard. The 904 samples, however, showed an average content of 3·7 per cent of milk fat and 8·8 per cent of non-fatty solids.

Legal proceedings under the Act were necessitated in twelve cases during the year. Ten of the offences related to the selling of milk containing various percentages of added water and in seven of these fines were imposed which ranged from £2 to £20, the remaining three eases being dismissed on payment of costs. The other two prosecutions related to the selling of Buttacream cheese containing margarine and the selling of rum containing excess of water. The first of these cases was dismissed on payment of costs and in the second a fine of £1/10/0 was imposed.

Warnings were given as a result of the analysis of eighteen milk samples and two samples of potted meat and also in five instances concerning Preservatives in food products.

## MILK AND DAIRIES ACTS AND ORDERS.

The presence of Tubercle Bachli in Milk.—134 bulk samples were taken during the year of raw milk produced on farms within the City in order that the biological test, by which the presence of tubercle bacilli is detected, could be applied. Tubercle bacilli were found to be present in 11, or 8·2 per cent, of the samples. 465 similar samples were taken of milk produced outside the City and 44 of these, or 9·5 per cent, contained tubercle bacilli.

PRODUCTION OF CLEAN MILK.—During the year 130 samples were taken of raw milk which had been produced within the City, for the purpose of ascertaining the Bacillus Coli content. These samples were taken either at the farms or just after the milk had left the farm premises.

The relative absence of the Baeillus Coli is a good indication as to whether hygienic methods have been employed in the production of the milk and it was found that 73 of the samples or  $56 \cdot 2$  per cent were satisfactory in that a one hundredth cubic centimetre of milk contained no Bacillus Coli.

Milk (Special Designations) Order, 1936.—Particulars are given below regarding the various types of milk, graded as a result of this Order, which were retailed in the City during the year :—

Tuberculin Tested Milk (Certified).—Approximately 832 pint bottles of this milk, or 104 gallons, were sold in the City daily during the year. One City farm produced 28 gallons and 76 gallons were produced at four farms situated outside the area.

Accredited Milk.—The daily sale of Accredited Milk in the City during the year was approximately 371 gallons, or 2,968 pint bottles. 151 gallons were produced at seven City farms, and 220 gallons on seven outside farms.

PASTEURISED MILK.—Three firms are lieensed for the pasteurising of milk in Sheffield and the daily average of the sale of this milk in 1937 was 11,973 gallons, which represents 45 per cent of the total supply of milk to the City.

Testing of Graded Milk.—It is a requirement under the Order that Tuberculin tested Milk and Accredited Milk must satisfy the methylene blue reductase test. 52 samples of Tuberculin tested (Certified) Milk and 205 samples of Accredited Milk were taken during the year and were submitted to this test. All but one of the samples of Tuberculin tested Milk and 184, or 89·8 per cent of the samples of Accredited Milk proved to be satisfactory.

As regards Pasteurised Milk the Order specifies that its bacterial content must not exceed 100,000 per cubic centimetre of milk. The number of bacteria is ascertained by what is known as the Plate Count test and of 270 samples submitted to the test 267 or 98.9 per cent, were satisfactory. As it is desirable that Pasteurised Milk should at all times be free from the Bacillus Coli the test for the ascertaining of the Bacillus Coli content was also applied to these samples and it was found that 240, or 88.9 per cent contained no Bacillus Coli in a one hundredth cubic centimetre of the milk.

The Phosphatase test, which indicates the efficiency of the pasteurising process, was a further test which was applied to pasteurised milk during the year. The 48 samples submitted to this test were all shown to be satisfactory.

Details of the various tests which were applied to Graded Milks during the year are given in the following statement:—

ch

Grade of Milk and source of Origin	Nature of Test	Number of Samples Tested	Number of Samples which where satisfactory
Tuberculin Tested Milk (Certified) from five Producer-retailers	Reductase	 52	51
Accredited Milk from twelve Producer- retailers	"	 129	116
Accredited Milk from five Producer- wholesalers	,,	 42	38
Accredited Milk from Retail Bottlers	,,	 34	30
Pasteurised Milk from three licensed depots	Plate Count	 270	267
Do, do	Bacillus Coli	 270	240
Do. do	Phospatase	 48	48

Legal Proceedings.—Legal proceedings were instituted in four cases under the Milk and Dairies Acts during the year and for the following offences:—

Retailing milk from a dirty milk float.

", vehicle not bearing retailer's name and address.

", vessel not bearing retailer's name and address.

Filling milk bottles elsewhere than on Registered Dairy Premises.

Fines were imposed in the first three instances and in the fourth the case was dismissed.

MILK IN SCHOOLS SCHEME.—By this scheme, which has been in operation since 1st October, 1934, any child attending school may receive there a one-third pint bottle of milk either free or at half the usual cost. 280 School Departments participated in the scheme during 1937 and the total quantity of milk supplied represents an average of 41,433 bottles per school day. The whole of the milk supplied to the Schools is pasteurised and there was strict supervision and samples were continuously submitted to bacteriological and other tests to ensure that the purity and quality of the milk were maintained.

# AGRICULTURAL PRODUCE (GRADING AND MARKING) ACT, 1928.

The above Act and the numerous Orders made under the Act are designed to standardise under grades the various kinds of agricultural and horticultural produce on sale to the public.

A large proportion of agricultural and horticultural produce now comes within the provision of this Act.

One station for grading eggs has been established in the City for the last eight years, and two premises in the City are registered for the cold storage of eggs.

No legal action was taken during the year but constant oversight of shops and markets has been necessary.

## FERTILISERS AND FEEDING STUFFS ACT, 1926.

Four informal samples of Feeding Meat Meal were purchased during the year and two of these were not to the prescribed standard. In one case the firm gave an undertaking to discontinue selling the Meat Meal and in the second it was found that a new employee had made a genuine mistake.

A complaint was received from an Outside Authority that Feeding Meat Meal sold in their area, but prepared in Sheffield, did not comply with its statutory statement. The Sheffield Depot where this feeding stuff was prepared was visited and instructions given which should result in there being no cause for complaint in the future.

## MERCHANDISE MARKS ACT, 1926.

Under this Act, "Orders in Council" are made at various times making it illegal to import, sell, or expose for sale specified imported food stuffs and merchandise unless at the time of importation, sale, or exposure for sale the food-stuff or merchandise was marked with an "Indication of Origin."

Amongst tradesmen in the City there is, on the whole, compliance with the Act but amongst street hawkers a certain amount of evasion of the law still takes place.

## PHARMACY AND POISONS ACT, 1933.

There are 367 establishments in the City, other than those of registered pharmaceutical chemists, which are licensed under the Pharmacy and Poisons Act, 1933, for the sale of poisons. Visits were made to these premises regularly during the year to ensure that the requirements of the Act as to storage, marking and in other essentials were satisfactorily carried out. Warnings were necessary in a few cases.

## REPORT OF THE CHIEF VETERINARY OFFICER.

H. M. SALUSBURY, M.R.C.V.S., D.V.H.

Assistant Veterinary Officers :-

F. H. Addison, B.Sc., M.R.C.V.S., D.V.S.M. Senior Assistant Veterinary Officer.

R. E. HIRTES, M.R.C.V.S.

Assistant Veterinary Officer.

I beg to submit for your consideration the Annual Report of the Veterinary Department for the year 1937.

The work is considered under three main headings:-

- I Diseases of Animals Acts and Orders.
- II Inspection of Meat and Other Foods.
- III Elimination of Tuberculous Infection from the Milk Supply of the City.

## DISEASES OF ANIMALS ACTS.

The Chief Veterinary Officer is appointed as Chief Inspector under the Diseases of Animals Acts. The administrative and technical duties entailed under these Acts and Orders, including the issue of licences, are done by the Department.

The Diseases of Animals Act of 1894 with its amending Acts of 1896 to 1937, and the Orders made thereunder, confer wide powers upon the Ministry of Agriculture and Fisheries and Local Authorities in the control of the 14 scheduled contagious diseases of animals.

The scheduled diseases are as follows:—

Anthrax, Foot and Mouth Disease, Parasitic Mange in Horses, Sheep Scab, Swine Fever, Tuberculosis, Epizootic Abortion, Fowl Pest, Sheep Pox, Cattle Plague, Pleuro Pneumonia, Epizootic Lymphangitis, Glanders or Farcy, Rabies.

The last six mentioned have not been met with in this country for some years, but legislation for their control remains in force.

Table showing the number of cases of scheduled diseases confirmed in the City.

-				Numbe	r of Cases Con	firmed.
D	ISEASE	ē.		1935.	1936.	1937
Tuberculosis				74	94	109
Anthrax			 	_		1
Swine Fever			 	16	10	9
Sheep Scab			 	_		
Foot and Mout	h Dise	ase	 	_	4	
Parasitic Mang	e		 		1	_

Tuberculosis Order of 1925.

Under this Order certain forms of bovine tuberculosis are notifiable. Cases are brought to light by the routine inspection with concomittant post-clinical herd sampling of dairy herds by this Department and to a lesser degree by notification by owners or attendant Veterinary Surgeons.

Provision is made in the Order for the payment of compensation to the owners of the slaughtered animals. Three quarters of the agreed value is given if the disease is "not advanced" and a quarter if the disease is "advanced."

As this Order is usually worked as a corollary to the Milk and Dairies Acts and Orders it is deemed more appropriate to consider it in the milk section of this report and the details are to be found on pages 200 and 201.

SWINE FEVER.

A considerable amount of work was done in connection with this disease.

Pigs are kept by city farmers and in addition many allotment holders buy stores for fattening.

Stores are bought at markets in Sheffield, and adjacent towns such as Doncaster, and Worksop, and it is among these "market pigs" that the highest incidence of Swine Fever is found.

Owners are in the habit of reporting to this Department all deaths occurring in pigs from unknown causes and *post-mortem* examinations of the carcases are conducted in every case.

This method combined with the routine inspection of all live pigs on licence under the Regulation of Movement of Swine Order and the *post-mortem* examination of all pigs killed at the public Abattoir and private slaughterhouses gives an early opportunity of detecting the disease should it exist.

Post-mortem examinations for the possible presence of Swine Fever were conducted on 179 pigs. Swine Fever was suspected in 12 cases and specimens of the viscera were forwarded to the Ministry's laboratory for confirmatory diagnosis. The disease was confirmed in 9 cases representing 9 different premises and involving a total of 242 pigs. In addition, movement restrictions were imposed on 10 "adjoining" premises involving 112 pigs.

Of the confirmed cases 7 were discovered as a result of the deaths of the animals being reported and the remaining 2 were found during the examination of slaughtered pigs in the ordinary course of meat inspection at the Abattoir. These 2 cases were connected with premises outside the City boundary.

REGULATION OF MOVEMENT OF SWINE ORDER.

The major provision of this Order is that all swine which are exposed for sale at markets in England and Wales (with the exception of a few parts) are thereafter subject to detention and isolation for a period of 28 days after leaving the market.

Systematic visits were paid to all premises receiving swine under licence with the double object of seeing that the conditions of the licence were being fulfilled and to maintain observation for the early detection of Swine Fever if it existed.

In this connection 199 visits to pig-keepers' premises respecting 11,259 pigs were made.

In addition licences were issued under the Order for the movement of 22,248 fat pigs for slaughter and 1,548 store pigs to other premises.

SHEEP SCAB.

More than 1,000 sheep run on the moors within the City boundary. No case of scab has occurred in Sheffield since 1934 and for the first time for several years no double-dipping Order was enforced.

#### FOOT AND MOUTH DISEASE.

There was no recrudescence of the December 1936 outbreak and restrictions on the 4 infected farms in the City were finally withdrawn early in February 1937.

No other outbreak occurred during the year.

On several occasions work was done in connection with outbreaks in other parts of the Country. These occasions arise when animals which have been in contact with other animals subsequently found to be suffering from the disease are moved into Sheffield.

The investigations revealed that in all cases the animals had been consigned to the Corporation Abattoir and had been slaughtered. The pens in the Abattoir lairages which these animals had occupied were specially cleansed and disinfected.

Many other orders which are more or less complementary to the Foot and Mouth Disease Orders are in force and visits and examinations were frequently made to see that their requirements were being observed.

#### ANTHRAX.

A case of Anthrax was discovered on a City farm in April 1937, the affected animal being a cow in milk. The carcase was carted intact to the destructor and burnt. This is the first case diagnosed in the City since November 1931.

#### PARASITIC MANGE.

No case was discovered during the year. The last two previous outbreaks in Sheffield occurred in 1925 and 1936.

## Importation of Animals.

The following animals were received from Canada and Ireland on licence:—
148 oxen. 487 sheep. 317 pigs.

The licence requires that the animals shall be detained for a period of 6 days unless they are moved to a slaughterhouse.

The majority of these animals were on a "fat" licence and were consigned direct to the Abattoir for slaughter.

Visits were paid to see that the conditions of the licence were being complied with in the case of "store" animals.

## Movement of Animals (Records) Order of 1925.

This order requires that movement of certain animals shall be recorded in a special way so that should an outbreak of disease occur, in-contact animals can be traced easily.

These records were frequently examined to see that they were being kept in a reasonable fashion and up-to-date.

#### TRANSIT OF ANIMALS ORDERS.

The cleansing and disinfection of road vehicles used for the transportation of animals to the Corporation Abattoir and to and from Wadsley Bridge Livestock Market was done by this Department at a charge of 6d. a vehicle. 2,002 vehicles were cleansed and disinfected during 1937.

SLAUGHTER OF ANIMALS ACT.

See page 192 of this report under "Mechanical Stunning of Animals."

LIVESTOCK MARKETS.

There are two livestock markets in the City at which weekly sales are held.

An officer of the Department attended each market in order to examine the animals, issue licences when required, and generally to see that the various orders governing the markets were being carried out satisfactorily.

Two animals exposed for sale at markets were suspected to be suffering from a scheduled disease and were dealt with as required by the appropriate Order.

## INSPECTION OF MEAT AND OTHER FOODS.

This section of the report deals with the work done in connection with the inspection of meat and other foods at the Corporation Abattoir, private slaughterhouses, the wholesale and retail markets, and retail shops in the city.

## INSPECTION OF MEAT.

In the City animals are slaughtered for food at (a) the Corporation Abattoir and (b) one Private Slaughterhouse.

There is also (c) a certain amount of fresh meat and offal brought into the City from animals slaughtered outside the City boundary.

#### (a) Corporation Abattoir.

Cattle, Sheep and Calves are slaughtered in eight main slaughterhalls. Pigs are slaughtered in a separate hall.

One Veterinary Officer and five Meat Detention Officers were on constant duty at the Abattoir.

Every animal slaughtered for food was inspected post-morten according to the method recommended in the Ministry of Health's Memo 62/Foods.

Ante-mortem inspection was also made of the majority of animals whilst they were in the lairages awaiting slaughter.

Carcases found to be diseased were taken to the Detention Room for final judgment by the Veterinary Officer.

An Isolation Slaughterhouse is provided. It is separate and distinct from the main building. This is a necessary adjunct to a large Abattoir and is rented by the Health Committee from the Markets Committee. All casualties and animals suspected to be suffering from disease were isolated, slaughtered and dressed there so that there should be no contact with healthy animals in the main slaughterhalls.

The risk of dressing anthrax infected carcases was covered, for a routine microscopical examination was made in all suspected cases of this disease.

Animals which were slaughtered under the Tuberculosis Order by the Corporation and by Local Authorities outside the City were kept under careful observation in this slaughterhouse.

The charges made for the use of the Isolation Slaughterhouse were similar to those made for the use of the Main Slaughterhalls.

## (b) Private Slaughterhouses.

There is one private slaughterhouse in the City. Only pigs are killed there and 6,591 pigs were slaughtered during the year, all being examined by a Meat Inspector specially detailed for this duty. 177 part carcases of pigs representing a total weight of 4,090 lbs. were condemned at this slaughterhouse.

## (c) Fresh Meat from Outside Sources.

More than 500 tons of fresh carcases and offals were brought into the City from animals which had been dressed in slaughterhouses outside the City boundary. Local legislation requires that, unless the meat has been inspected and passed by the Local Authority in which the animal was slaughtered, notice shall be given naming the place and time at which the meat can be inspected.

In some cases "outside" meat was submitted for inspection at the Abattoir before sale. This action was purely a voluntary one on the part of the butchers concerned. Some butchers still insisted on submitting the meat for inspection at their shops.

In view of the difficulty of identifying meat which does not bear the official stamp of a local authority as authorised by the Ministry of Agriculture, the City Council is seeking powers which will ensure that no person shall "offer for sale or sell or deposit for sale any meat or any part of the carcase of an animal which shall have been brought into the City until after the same shall have been taken for inspection to the Sheffield Corporation Abattoir and there inspected by an Officer of the Corporation."

3,280 visits were made to slaughterhouses and shops.

Periodic inspection was made of home-killed "stamped" meat and also of imported carcases bearing the certificate of inspection of the country of origin.

In all cases in which meat was condemned it was handed over voluntarily by the butchers to the Corporation. In no case was it necessary to seize it to obtain a Magistrate's Order for its destruction.

The Corporation paid compensation at the rate of half-a-crown a hundredweight for condemned carcases and a shilling a hundredweight for condemned offal. The carcase meat was weighed and the weight of the offal was calculated on average weights for each organ.

The Corporation also purchased certain other material from the butchers such as eattle uteri and sheep and calves' middles. Some of the material, and a quantity of condemned meat and offal, was used by the Corporation for the manufacture of by-products.

A total weight of 1,790 tons 11 cwts. 3 qrs. of "material" was removed from the Abattoir during the year, of which 850 tons 18 cwts. 3 qrs. were used for the manufacture of byproducts and 939 tons 13 cwts. were destroyed.

## MECHANICAL STUNNING OF ANIMALS.

Under the Slaughter of Animals Act 1933 the Corporation supplied the workmen and necessary apparatus for the mechanical stunning of animals slaughtered in the Abattoir.

Cattle were stunned by the captive bolt (Schermer) pistol, and calves, sheep and pigs were stunned by the electrical method.

The electrical stunning of cattle has been practised satisfactorily in the isolation slaughterhouse but up to now it has not been found practicable on these animals in the main slaughterhalls.

A charge of a penny a head is made for stunning cattle and pigs and a  $\frac{1}{2}$ d. a head for sheep and calves.

The number of animals mechanically stunned during each of the last three years was as follows:—

 1935
 ..
 177,844

 1936
 ..
 190,779

 1937
 ..
 176,720

## INSPECTION OF FOOD OTHER THAN MEAT.

Food supplies at the wholesale fish and fruit markets, wholesale imported meat shops, wholesale provision premises, retail markets and railway sidings were inspected for soundness. Chits were issued to commission salesmen for the food condemned and the goods were removed for destruction. 2,321 visits were made during the year.

Poultry, Game, Fish, Fruit and Vegetables, Provisions, &c., destroyed as being unfit for human consumption during the year:—

Poultry and Game.	Fish	FRUIT AND	Vegetables.	Provisions etc.
Fowls         91         Rabbits        1761         Eggs        149 doz.         Hares        5         Pigeons        16         Ducks        14         Turkeys        2 cases and 13         Partridges        16         Geese           Frozen Rabbits        875	12 tons. 9 cwts. 3 qrs.	Pears Tomatoes Mushrooms Plums Apples Lettuce	8 crates 32 skips 20 trays 1 barrel 3 crates 15 cwts.	Canned goods :— 4,350 tins.

Shellfish dealers were advised by the Medical Officer of Health to purchase their supplies of mussels from the centres where they are relaid for purification. Samples were taken for bacteriological examination when consignments were received from other sources because of the danger of sewage pollution.

## ABATTOIR LABORATORY.

The laboratory attached to the Abattoir was used for the examination of a large number of samples arising out of the inspection of meat and other foods.

# ELIMINATION OF TUBERCULOUS INFECTION FROM THE MILK SUPPLY OF THE CITY.

The activities in connection with the elimination of Tuberculous Infection from the City Milk Supply were controlled by two methods which are supplementary to one another.

The methods used were:-

- (a) Systematic routine clinical examination of all milch cows in the City.
- (b) The biological testing of bulk samples of milk.

The powers for the necessary administrative duties in this connection are conferred by:—Milk and Dairies (Consolidation, Act, 1915.

,, ., (Amendment) Aet, 1922.

,, Order, 1926.

Milk (Special Designations) Order 1936.

Tuberculosis Order, 1925,

Veterinary duties in relation to diseases of animals under the Diseases of Animals Acts, 1894 to 1935 are also included.

MILK FROM THE CITY HERDS.

At the end of 1937 there were 140 registered milk producers having approximately 1,850 milch cows on their premises.

The herds, as is commonly the case in and around heavily populated areas, are known as "flying herds" because large numbers of heavy milking cows are constantly being added to them in order to replace those animals which become dry and which are, as a general rule, sold fat to the butcher. It is amongst cows of this class that the highest incidence of tuberculosis is found.

Whilst the quarterly examination of milch cows is considered to be the minimum frequency as applied to the country generally, it is obvious in the case of "flying herds" that this is not sufficient and the aim of this department is systematically to examine the City dairy cows at intervals of not greater than 6 weeks.

As from the beginning of the year what has now come to be known as "post-clinical herd sampling" has been practised.

The method, described very briefly, is that at the conclusion of the clinical examination of each cow a sample of secretion is taken from each teat of each cow and bulked together. The milk thus obtained from the several herds examined during one day is again bulked and the sample is submitted to the biological test.

In this way each day's work is controlled and the method, properly carried out, ensures that any cow which has been "missed" at the clinical examination—often tuberculous disease of the udder is in the pre-clinical stage—will be found as a result of the guinea-pig test.

All the herds in the City were examined 6 times during the year and this means that, in addition to the clinical examination, the milk from each herd was submitted to the biological test a corresponding number of times.

It will be seen from the figures quoted later that as many udder were found as a result of post-clinical herd sampling as were found on routine examination and the number of cows with tuberculous udders slaughtered, viz., 49, is far and away the highest yet recorded for the City.

An analysis of the six surveys of the herds shows that approximately 48 samples were required for each survey. The samples were made up as follows:—

D : 11 1 1 1 1		
Post-clinical herd samples		23
Control and other samples f	following "positives"	25
		10

This compares more than favourably with the old method of sampling biologically the milk in the churn from each farm, which, for two surveys only, required an average number of 173 samples per survey.

Under the new method the cost of the collection of samples is for all practical purposes negligible.

## A. Routine Clinical Examination.

Number of herds	examined						691
Number of cows	examined						9,078
Number of milk s	samples examined	microsco	pically				351
Number of sample	es of sputa and otl	her mater	rial exam	ined micr	coscopica	lly	599
Number of T.B. 1	udders found						19
Number of T.B.	cases (other form	s) found					39

140 post-clinical mixed herd samples and 28 group-special samples were taken immediately after the clinical examination and sent for the biological test. Of these 21 post-clinical herd samples and 4 group-special samples proved positive.

## B. Positive post-clinical herd samples. First Enquiry.

Number of farms implicated						94
Number of cows examined						1,290
Number of milk samples examined	d micro	scopically				170
Number of samples of sputa and of	other m	naterial exa	amined 1	microscop	oically	114
Number of T.B. udders found (1 b)	iologica	lly)				7
Number of T.B. cases (other form	s) foun	d				9*
* Including 1 tolon b	T anoth	on Local				

\* Including 1 taken by another Local Authority.

After this enquiry 90 group samples and 3 individual samples were sent for the biological test. Of these 12 group samples and 1 individual sample proved positive.

## C. Second Enquiry.

Number of farms implicated				• •		14
Number of cows implicated						161
Number of milk samples examined	mic	roscopical	lly			84
Number of samples of sputa and o	ther	material	examined	microscop	oically	15
Number of T.B. udders found (1 bid	ologic	ally)				5
Number of T.B. cases (other forms)						2

After this enquiry 30 group samples and 10 individual samples were sent for the biological test. Of these 4 group samples and 1 individual sample proved positive.

## D. Third Enquiry.

Number of farms implicated			 	 4
Number of cows examined			 	 19
Number of milk samples examined	mic	roscopically	 	 19
Number of samples of sputa and of				5
Number of T.B. udders found (3 bid				 4

After this enquiry 14 individual samples were sent for the biological test. Of these 3 proved positive and are included above; the rest were negative.

## E. Positive Group-Special Samples.

Number of farms implicated			 		12
NT 1 C			 		18
Number of milk samples examined	micr	roscopically	 		15
Number of samples of sputa and ot			microscop	oically	11
Number of cows suffering from T.B					3

After this enquiry 14 individual samples were sent for the biological test. Of these 2 proved positive and are included above.

# BIOLOGICAL TESTING OF MILK SAMPLES FROM CITY HERDS BY FOOD AND DRUGS INSPECTORS.

134 bulk samples of milk from 140 farms were taken, of which 11 proved positive.

Investigations had been in progress for some time on 4 of these positive samples as the result of post-clinical herd sampling. They have therefore been dealt with under that heading.

The work arising from the remainder of the positive M.O.H. samples is detailed below:—

No. of	visits made			 9
,,	herds examined			 7
,,	cows examined			 100
11	further special milk samples sent for biolo	gical	test	 4
••	control samples sent for biological test			 19
11	milk samples examined microscopically			 56
,,	sputum samples examined microscopically			 6
**	cows suffering from tuberculosis of the u	dder		 5
- 77	cows clinically affected with tuberculosis			 1

Note.—Five cows suffering from tuberculosis of the udder were taken under the Tuberculosis Order from five farms. In one case a cow was taken under the Tuberculosis Order as a clinical case (Chronic Cough). On post-mortem examination of this animal the supra-mammary glands were found to be tuberculous. As further bulk samples of milk taken from the remaining cows on the premises proved negative to the biological test it was assumed that this cow was the cause of the infection. In the remaining cases further bulk samples of milk taken from all milch cows on the premises proved negative to the biological test. It was ascertained however in this case that a cow whose milk was in the original sample had been condemned for advanced tuberculosis in a local abattoir before the result of the test.

## Tuberculosis Order, 1925.

This Order is considered here for convenience and further reference to it is made on page 189 of this report.

109 City cows were dealt with under this Order, the highest number yet recorded in the City.

The following is an analysis of the several methods of detection and the conditions found :--

Method of detection	Tuberculosis of the udder	Tuberculosis other forms	Total
Routine dairy inspection	19	39	58
positive post-clinical herd sample	19	10	29
Clinical examination following biologically positive M.O.H. sample	5	1	6
Reported cases	6	10	16
Total	49	60	109

The following table shows the number of animals dealt with and whether the disease was of the udder or "other forms."

		Number of	Number of	Tuber	culosis	Result of g	post-mortem
Year		animals examined	animals slaughtered	Udder	Other forms	advanced	Not advanced
1935		8,175	74	29	45	27	47
1936		8,696	95	20	74	34	60
1937		10,550	109	49	60	69	40

Tuberculosis of the udder constituted 45·0 per cent. of the cases dealt with. Owners were encouraged to attend post-mortem examinations and actually attended in 41 cases.

As a result of the post-mortem examinations 35 carcases were passed as fit for food and 74 were condemned.

As showing the frequency of the disease on certain premises the following figures show the number of farms on which animals have been found to be tuberculous:—

From	each	of	43	farms one animal has been slaughtered	 43
,,	,,	,,	18	farms two animals have been slaughtered	 36
,,	,,	,,	7	farms three animals have been slaughtered	 21
,,	,,	,,	1	farm four animals have been slaughtered	 4
,,	"	,,	1	farm five animals have been slaughtered	 5
To	tal		70		109

Below is set out the financial statement for 1937.

Amount of Exchequer grant & Salvage from sale of carcases &				Compensation paid to owner Balance towards administration			
- £	€877	7	8		£877	7	8

The total agreed value of cattle slaughtered was £1,556/5/0, or an average of £14/5/6 per head. The average compensation paid to owners was £6/1/3.

MILK FROM OUTSIDE THE CITY.

Bulk samples of milk from the country herds supplying milk for sale in the City were taken periodically by the Medical Officer of Health and submitted to the biological test.

The county authority concerned was notified whenever a sample was found to contain tuberculous infection and asked to carry out the requirements of Section 4 of the Milk and Dairies (Consolidation) Act, 1915.

Note.—Section 4 makes it obligatory for a Medical Officer of Health to arrange for the inspection of cattle in the dairies in respect of which a notice is given that milk supplied therefrom has been found to contain tubercle bacilli.

Result of biological tests made on bulk samples of milk coming from Outside Sources.

		Bulk Samples	Result of	Dancentown	
Source			Free	Tuberculous	Percentage Tuberculous
Derbyshire		357	112	30	8 · 40
West Riding of Yorkshire		52	39	13	25 · 0

Rotherham	,	5	4	1	20.0
Totals		414	155	44	10 · 62

## MILK (SPECIAL DESIGNATIONS) ORDER 1936.

## Accredited Farms.

There was a slight increase in the number of Accredited producers and the total was 10 at the end of the year. The 10 herds represented approximately 235 cows in milk and these herds were examined clinically at intervals of approximately six weeks.

#### Tuberculin Tested Milk.

Only one producer in the City held a licence to produce "Tuberculin Tested Milk." One herd only of known tubercle-free cows seems a very small number out of the 140 registered producers within the City. As has been frequently pointed out it is almost impossible to keep a herd free from tuberculosis when fresh untested cows are continually being added under the "flying herd" system of management.

The use of the tuberculin test was encouraged as it is a guarantee against the risk of infection of the milk supply with living tubercle germs and is a safeguard against the condemnation of the meat when the animal is sent for slaughter. In addition to the Public Health aspect of the question, it more than compensates the farmer for the trouble taken in the selection of cows which have passed the test.

To argue that the supply of cows which have passed the test is limited is futile. If the demand is created the supply will follow.

All the cows in the herd of the Corporation farm at Longley Hall passed the tuberculin test prior to purchase.

## VETERINARY SUPERVISION OF CORPORATION ANIMALS.

The Department is responsible for the health of the Corporation animals and 80 visits were paid in this connection.

The health of the animals was good.

PROSECUTIONS.

For offences under the Tuberculosis Order, 1925:—

One defendant was fined £20

" " " " £10

" " " " " £5

For offences under the Foot-and-Mouth (Infected Areas) Restrictions Order:—

One defendant was fined £3

,, ,, ,, £1

Two defendants were fined 10/- each.

Two cases were dismissed on payment of costs.

For offences under the Public Health (Meat) Regulations:—

One defendant was fined £2

For offences under the Merchandise Marks Act :—

Six defendants were fined 10/- each.

One defendant was fined £1

For offences against the Regulation of Movement of Swine Order:

One defendant was fined £10

,, ,, ,, £2

I wish here to record my appreciation of the work of my staff and to express my thanks to the Chief Constable and Markets Superintendent for their co-operation in the administration of the Diseases of Animals Acts.
